 naphthacene, in dibenzyl and diphenyl, absorption and luminescence spectra, impurity conc. depend. 1=11374
 naphthacene, in dibenzyl stilbene crystals, absorpt. and luminesc. spectra 2=23568
 naphthacene, ionization-dissociation processes caused by electron impact 4=28248
 naphthacene, in organic crystals, absorpt. spectra and luminesc. 2=6568
 naphthacene segregation coeff. in anthracene, luminescence meas. 4=29057
 naphthacene solns., fluoresc., anthracene-sensitized 4=191
 naphthacene, solutions, spectra, changes on addition of ferric acetylacetonate 3=15359
 naphthacene, spectral solvent shifts 2=21910
 naphthacene, in tolan, stilbene and p-ditolyl, absorption and luminescence 1=11375
 naphthacene vapour, absorption and fluoresc. 4=1300
 naphthalene, absorption bands, various props. 2=18837
 naphthalene—anthracene, impurity luminescence, reabsorption 1=14646
 naphthalene with anthracene, luminescence, retarded, mechanism 4=22936
 naphthalene, with anthracene and methyl naphthalene, fluorescence, temp. depend. 1=6231
 naphthalene with benzophenone donor, phosphorescent triplet-triplet transfer, 298° and 77°K 4=4315
 naphthalene, binary liq. systems, densities 4=11177
 naphthalene, binary liq. systems, u.s. velocity and compress. 4=11178
 naphthalene and C₁₀D₈, fluoresc. spectrum at 20°K 0=6811-12
 naphthalene, charge-transfer complexes, intersystem crossing 4=13100
 naphthalene, Costa Ribeiro effect 1=1119
 naphthalene, counter scintillation efficiency 4=3240
 naphthalene, coupling between π, π^* states 2=18469
 naphthalene, crystal excitons, capture by anthracene impurity, mechanism 3=20139
 naphthalene, crystal growth 2=4386
 naphthalene crystals, elastic consts. 4=1957
 naphthalene crystals, exciton absorption linewidth 4=9916
 naphthalene crystals, impurities rel. to scintillation props. 2=14748
 naphthalene crystals, luminescence decay times 2=18869

Organic compounds—contd

- naphthalene crystals, phase-changed, first-order, study using positron annihilation 4=23300
 naphthalene, Debye approx. 3=15440
 naphthalene derivatives, absorption and phosphorescence spectra 0=5949
 naphthalene derivatives in solution, luminescence, effect of pH value 1=2764
 naphthalene derivs., luminescence 2=14746
 naphthalene derivs., luminescence, hydrogen-bonding effect 2=19568
 naphthalene derivs., radiationless conversion in solns. 2=15610
 naphthalene and deuterio naphthalenes, vibr. spectra 4=30465
 naphthalene and dihydroxy derivs., absorption spectra comparison 2=20855
 naphthalene- $\alpha\alpha'$ -dinaphthyl ethylene mixed crystals, luminescence rel. to impurities 2=14748
 naphthalene, doped with anthracene, direct fluorescence 1=20024
 naphthalene, in durene, e.s.r., triplet state h.f.s. 1=14799
 naphthalene, in durene, radiationless triplet-singlet transitions 3=23115
 naphthalene, ESR, line broadening rel. to electron transfer processes 1=14803
 naphthalene, e.s.r. obs. of $\Delta m = 1$ transitions 3=1186
 naphthalene, elec. cond., impurity effect 4=26064
 naphthalene, electret formation, effect of alternating fields 0=635
 naphthalene, electret state, i.r. irradiat. effect 4=1669
 naphthalene, electron absorpt. spectra 2=18821
 naphthalene, electron state, zero-field splitting 1=12361
 naphthalene, electronic structure, calc. 0=11531
 naphthalene, electronic structure, LCAO method 2=22992
 naphthalene, evaporation, etch-pit formation 3=3934
 naphthalene, excess electron and hole band structures 4=1430
 naphthalene, excited state vibrational energy transfer in collisions 4=3898
 naphthalene, exciton diffusion and capture by anthracene impurity 1=14227
 naphthalene, fluoresc. by α -rays, polarization 4=20503
 naphthalene, fluoresc. spectrum, 2°-100°K 3=25493
 naphthalene, fluorescence 2=11483
 naphthalene, fluorescence quenching by diacetyl in hexane soln., 28°C 4=14174
 naphthalene, fluorescence spectra, solid soln. in pentane and vapour 4=13102
 naphthalene, fluorescence spectrum & decay time 3=138
 naphthalene, fluorescence spectrum of frozen solns., interpretation 0=4446
 naphthalene; fluorinated, electric shifts 0=5957
 naphthalene, freezing nucleus size, by u.s. velo. anomalous increase 3=18251
 naphthalene, in glassy media, phosphorescence-fluorescence quantum field 4=10231
 naphthalene, glow-discharge, triplet-triplet transition 2=3015
 naphthalene h-8 and d-8, absorpt. spectra 2=16817
 naphthalene h-8 and d-8 mixed crystals, exciton luminescence 2=21276
 naphthalene and halogen derivs., luminesc. anisotropies 4=13101
 naphthalene, hole mobility, calc. 3=20339
 naphthalene, impure, anomalous absorpt. of light near exciton bands 2=2234, 4157
 naphthalene, impurity luminescence rel. to temp. 2=21275
 naphthalene, i.r. absorption bands, width and profile 0=20614
 naphthalene, intrinsic luminescence 0=10063
 naphthalene, ionization-dissociation processes caused by electron impact 4=28248
 naphthalene, ionization potential and mass spectra 0=3738
 naphthalene ions, Hartree-Fock calcs., unrestricted, spin props., computation by improved method 4=28174
 naphthalene, ions, open-shell wave-functions 1=12294
 naphthalene, kinking mechanism 1=14891
 naphthalene liquid state, u.s. velocity and compressibility 1=18406
 naphthalene, luminescence 2=14747

Organic compounds—contd

- naphthalene, luminescence, effect of D substitution 0=10231
- naphthalene, luminescence, γ -excited, yield rel. to impurity concn. 3=963
- naphthalene, luminescence, lifetime var. solvent 4=20496
- naphthalene, luminescence, soln., conc., in pentane, transfers, analogy with excitons 4=187
- naphthalene, with methylnaphthalenes and naphthols, luminescence and absorption spectra 0=21003
- naphthalene mixed with light gas, intermolec. interaction rel. to temp. 2=16567
- naphthalene, modified Urey-Bradley force field 2=16536
- naphthalene, molecules, vibration symmetry types 3=17605
- naphthalene mols., excitation modulation spectroscopy 3=12802
- naphthalene and monoderivatives, phosphorescence and fluorescence 0=10070
- naphthalene, monohalogen derivatives, singlet-triplet emission polarization 4=4317
- naphthalene, multiple-centre dipolar interaction integrals 4=3843
- naphthalene- β -naphthol and naphthalene-benzoic acid, zone refining, effect of free convection 4=29058
- naphthalene, near u.s. absorption spectra 2=8525
- naphthalene neg. ion, C^{13} hyperfine structure in e.s.r. spectra 1=17345
- naphthalene negative ion, C^{13} coupling const. 3=15384
- naphthalene, as neutron detector 3=4411
- naphthalene, nuclear quadrupole resonance in solid solution 1=20277
- naphthalene and octodeuterated naphthalene mixture, absorption spectra 2=6566
- naphthalene, optical dispersion and reflection, 20°K 2=23541
- naphthalene, paramagnetic resonance of phosphorescent crystal 1=6234
- naphthalene, in para-polyphenyls, absorption and luminescence spectra 1=14648
- naphthalene, phase charges, charge formation 0=16005
- naphthalene-phenanthrene, optically excited, energy transfer, e.s.r. study 2=21370
- naphthalene-phenyl biphenyl ethylene mixed crystals, luminescence rel. to impurities 2=14748
- naphthalene, phosphorescence lifetime, effect of deuteration 0=16101
- naphthalene, phosphorescence at low temp. 3=13211
- naphthalene, phosphorescence polarization, 77°K 4=4314
- naphthalene phosphors, e.s.r. study 0=21080
- naphthalene, photo and radioluminescence 2=6628
- naphthalene, photo- and thermoelectrets 0=13660
- naphthalene, photodepolarization 3=17908
- naphthalene, pi electron localization energies, ZDO calc. 4=12430
- naphthalene, polarization of luminescence 0=11778
- naphthalene, in polymer solution, decayed fluorescence obs. 1=20023
- naphthalene in polymethylmethacrylate host, e.s.r. triplet state, effect of temp. 4=23054
- naphthalene quenching of liquid scintillation solns. 3=11801
- naphthalene, radiationless transitions between states of different multiplicity 1=6058
- naphthalene, Raman shifts, l.f. 4=4281
- naphthalene, Raman spectrum, wave numbers and intensities 0=14817
- naphthalene-salicylamide mixed crystals, luminescence rel. to impurities 2=14748
- naphthalene, scintill. by energetic α -rays, deuterons and electrons at low temps. 4=26254
- naphthalene, scintillation light yield for α and β -rays 4=13093
- naphthalene, self-absorption band, 20-290°K 2=8526
- naphthalene, self-fluorescence at 4.2°K, effect of contaminant eliminated 1=10125
- naphthalene, semiconducting props. review 4=28578
- naphthalene, semiconductivity 2=8369
- naphthalene, sensitized fluoresc., 2°-100°K 4=1791
- naphthalene, shock excitation, CN, C₂ and CH spectra 1=2310
- naphthalene single crystals, refractive index meas. 2=17591
- naphthalene single crystals, u.s. absorpt. meas. 4=20206
- naphthalene, skeleton, out-of-plane molec. vibrations and "shrinkage effect" 2=22993

Organic compounds—contd

- naphthalene, sol. in CCl₄, molecular rotation 3=14143
- naphthalene, solid, absorption spectrum 2=12595
- naphthalene, solid and liquid, with soluble impurities, thermal expansion near m.p. 3=21324
- naphthalene, soln. in solid pentane, luminescence spectra 1=17917
- naphthalene, solubility in compressed gases 3=304
- naphthalene, solubility in compressed nonpolar gases, rel. to spectral shifts 4=6633
- naphthalene, solutions, spectra, changes on addition of ferric acetylacetonate 3=15359
- naphthalene solvent, soln. scintillators 3=18821
- naphthalene, spectral solvent shifts 0=16707
- naphthalene, spectral solvent shifts 2=21910
- naphthalene, spectral term scheme 4=20473
- naphthalene, structure of 5 derivatives 0=8242
- naphthalene, sublimation, heat exchange, nature 3=16841
- naphthalene-tetracene solid solns., energy transfer 4=1792
- naphthalene-tetrachlorophthalic anhydride, phosphorescence and fluorescence, 2-photon excitation 3=25490
- naphthalene, thermally stressed films, absorption spectra, 20°K 4=15606
- naphthalene, triplet-state, electron spin distrib. and hyperfine interactions 4=23053
- naphthalene, u.s. dispersion, molecular structure 3=21354
- naphthalene, u.s. velocity 0=10659
- naphthalene, u.s. velocity rel. to molecular parameters 1=18403
- naphthalene, u.v. spectra 3200-2200 Å, absolute intensity 3=934
- naphthalene, vapour fluorescence spectrum 2=20856
- naphthalene vapour, triplet state decay 4=22409
- naphthalene vapour, u.v. emission, r.f. excited 1=7476
- naphthalene, vibrationally excited excitons 2=23122
- naphthalene, X-ray diffuse scatt., temp. depend. 2=8160
- naphthalenes, disubstituted, dipole moments, calc. 4=12508
- naphthalenes, D-substituted, Rashba effect 4=1714
- naphthalenes, phosphorescence quenching of benzophenone and benzaldehyde 0=944
- naphthazarin, bond lengths and orders, π electron distrib., calc. 0=13453
- naphthazarin, radical, anion, e.s.r. and H-bonds 3=17610
- naphthazarin, Renninger effect 0=16297
- β -naphthol soln., laser action possibility 4=14166
- naphthols, electronic spectra 2=18470
- β -naphthylamine, non-radiative transitions 1=6034
- β -naphthylamine, molecular excitation temp. and vibr. specific heat calc. 4=12493
- nematic and cholesteric liquid crystals, order and flow 3=9441-2
- neopentane-C₂H₆, neopentane-C₂H₁₂ mixtures, velo., acoustic waves, var. 3=16622
- neopentane pyrolysis, catalytic transfer by HCl 4=23633
- neopentane, self-diffusion 1=4350
- neopentane, self-diffusion coeff. 0=3513
- neopentane, symmetry groups, character tables, computation 4=28180
- neopentyl chloride, pyrolysis mechanism 4=2148
- nickelocene, electronic spectra 2=6183
- nitrenes in glass, e.s.r. ground-state triplet spectra 4=13326
- α -nitriles, aliphatic unsat., electronic struct., from Faraday rot. 4=17307
- nitriles, C \equiv N vibrations and isotope effects 2=18471
- nitriles, N¹⁴ pure quadrupole resonances 1=4950
- nitriles, π -electron bonds and density calc. 4=25712
- nitriles, Raman spectra intensities 1=14033
- n-nitroaniline in benzol, Raman spectrum, absorption and line intensity 1=12291
- nitroanisole, effect of molec. assoc. on velocity of sound 1=2755
- nitroaromatic amines, in soln., n.m.r. 4=28247
- nitrobenzene anions, p-substituted, e.s.r. spectra, solvent effects 4=11218
- nitrobenzene, C¹³ nuclear magnetic resonance 3=10545
- nitrobenzene, crystal structure at -30°C 0=4655
- nitrobenzene, dielec. const., elec. field effects at 3 cm 4=21145
- nitrobenzene, dielec. const. in strong elec. fields 0=19141
- nitrobenzene, dielectric const., in intense elec. field 0=8663

Organic compounds—contd

- nitrobenzene-heptane soln., light scatt., Krislman effect 2=9409
 nitrobenzene-heptane, stratifying system, light scatt. indicatrices 4=24215
 nitrobenzene-hexane, stratifying system, light scattering indicatrices 4=24215
 nitrobenzene, i.r. transmittance and Kerr effect 1=12883
 nitrobenzene, liquid, lack of orientational ordering 1=11747
 nitrobenzene, meas. of Kerr constant 1=4480
 nitrobenzene molecule, electronic structure and spectrum, calc. 1=14064
 nitrobenzene--n-heptane, X-ray low angle scatt., crit. opalescence 4=16113
 nitrobenzene, n.m.r. 3=739
 nitrobenzene, pre-breakdown phenomena 1=5437
 nitrobenzene, Raman scattering cross-sections 4=17300
 nitrobenzene, Raman spectrum, from laser, two-step process 4=5191
 nitrobenzene solns. in n-hexane, diffusion coeff. 0=19109
 nitrobenzene, space charge phenomena 0=1106
 nitrobenzene, stimulated Raman effect, amplification meas. 4=16687
 nitrobenzene-trimethylpentane, dielec. dispersion near critical soln. temp. 4=5206
 nitrobenzol, soln. in n-heptane, optical extinction and light scatt. 3=21367
 nitrobenzol, solns. in hexane, dielec. props., structure 3=21386
 t-nitrobutane, molecular rotational relaxation 1=12898
 nitrocellulose, anisotropy by scatt. of light 2=6239
 nitrofuranes, powder, with naphthalene, Raman spectra 4=26170
 nitrogen heterocyclics, spin-orbit coupling and radiationless processes 3=17604
 nitrogen-organic cpds, $B^2\Sigma^+ \rightarrow X^2\Sigma^+$ transition spectra in discharges 3=12850
 nitromethane, in benzene and water, light scatt. 4=24214
 nitromethane, detonation 3=8962
 nitromethane, dipole moments of bonds 4=3897
 nitromethane, liquid, detonation, hypervelocity wave phenomena 0=16378
 nitromethane, self-diffusion coeff. 0=3513
 nitromethane, shock-wave velocities and effects 0=16776
 α -nitro-naphthalene, dielec. relaxation, effect of temp. 0=5022
 p-nitrophenol, cond., elec., surface anisotropy meas. 4=17465
 nitrophenol, effect of molec. assoc. on velocity of sound 1=2755
 p-nitrophenol, phase transform., $\beta \rightarrow \alpha$, lattice reconstitution 4=17779
 p-nitrophenol reaction with triethylamine in aprotic solvents, three types of complex form. 4=29209
 o- and m-nitrophenol, u.s. velocity 0=10659
 nitrosoderivatives, aromatic, i.r. spectra 1=6017
 nitrosohydroxylaminesulphonate ion, decomposition, acid catalysed, kinetics 3=20980
 nitroso-methane and dimers, mol. SCF bonds, calc. 4=15373
 nitro-substituted benzene anions, e.s.r. spectra, alternating linewidths 4=25729
 p-nitrotoluene, heat of fusion 4=5450
 nitrotoluene, meas. of Kerr constant 1=4480
 nonane, liquid, PVT relations 1=8108
 noncyclic molecules, Pascal consts., calc. 2=16501
 n, n'-nonoxybenzaltoluidene, liquid crystals, structure 4=24171
 novomethylene blue, liquid crystal spectrum 4=24220
 nuclear reactors, moderators 1=17245
 nucleic acid, ferromag. inclusions 2=8647
 nucleic acids, effect of molec. wt. on luminescence 0=20995
 nucleic acids, thermal and elec. props. 1=6129
 nucleic acids, two-stranded, helix-coil equil. 4=3943
 nucleotides and nucleic acids, phosphorescence 4=22933
 octacyanide complexes, electronic structure and spectra 3=725
 n-octadecane, spectral dispersion curves 3=17592
 octadecanol monolayers, effect of benzene and hexane spreading solvents 0=10371
 n-octadecyl disulphide, γ -irradiated, e.s.r. 3=6416

Organic compounds—contd

- octamethyltrisiloxane, liquid and crystalline, i.r. spectra rel. to temperature 3=14169
 octane-hexane soln., density, temp. depend. near critical pt. 2=7478
 i-octane-perfluorooheptane solns., cluster formation 0=3519
 n-octane, surface tension, effect of Ar, 1-120 atm 3=18795
 n-octane, virial coeffs. and intermolecular mechanics 0=11544
 n-octanol, effect on fluorescence of acetylanthracene in hexane 1=9400
 n-octanol, self-diffusion at 25°C 0=14632
 octodeuteronaphthalene, thionaphthene doped, luminescence, 20.4-77°K 4=4316
 n-octyl alcohol-diethylene glycol, u.h.f. dielec. props. 1=1751
 n-octyl bromide, proton resonance, motion of C-Br bond 0=14667
 oil between electrodes as insulator, luminescence 0=3541
 oil decomposition, in vacuum pumps, effect of operating conditions 2=9323
 oil film on metal, thickness meas. 4=16087
 oil film, thickness meas., for elasto-hydrodynamic lubrication 4=16086
 oil, heat transfer, transient phenomena 3=11865
 oil, mineral, compressibility, negative press. 4=21107
 oil, in paraffins, det. by i.r. absorption 2=21602
 oil, photonutron emission rel. to water 2=18317
 oil, transformer, electric breakdown, quenching effect of oxygen 4=2705
 oil, ultrasonic and visco-elastic relaxation 1=5277
 oil-vapour flow in piping, low conductance 3=16647
 oil-water interface, oil drop coalescence 0=14610
 oils, dielectric losses 1=18426
 oils, halogenated, trace water content 0=4766
 oils, NBS, for viscometer calibration 3=9421
 oils, n.m.r. of 6 types 3=23913
 oils, very viscous, effect of u.s. radiation 0=14131
 olefines, addition of H atoms 1=20732
 olefines, O atom addition 0=21273
 olefinic cpds., n.m.r. spectra 1=15911
 olefins, ion-molecule reacts. 2=8135
 olefins, proton magnetic resonance 1=14105
 olefins, reactions with O atoms 3=11341
 1:1 charge-transfer complex crystal growth of 1,4-diaminodurene in contact with p-chloranil 3=11228
 orbital open shell SC field calc. method for aromatic and olefinic cpds 4=25627
 organic halide-alkali metal flame spectra 4=7755
 organic species in amorphous media, laser action 4=19297
 organometallic content in plastic scintillators for improved γ -counting 4=21826
 organometallic cpds. scintillator solns., quenching 3=1700
 organo-phosphorus cpds., n.m.r., in earth's field 4=3915
 ortho-dichlorobenzene, C^{13} n.q.r., Zeeman effect 4=13355
 ortho-semiquinones, spin densities from e.s.r. meas. 4=1305
 ovalbumin, photochemistry, u. v. attack, eosin sensitized 4=7770
 1,3,4-oxadiazole derivatives, scintillation efficiencies, chem. structure relationship 0=10676
 oxadiazole derivatives, in various solvents, scintillation activating props. 4=11207
 1,3,4-oxadiazole in polystyrene, photoluminesc. and fluoresc. 2=1160
 oxadiazoles, absorption spectra, rel. to 1-methylnaphthalene 3=18815
 oxalato metal complexes, i.r. spectra 2=3745-6
 oxalic acid, Al, electrolysis, luminescence, flash spectra 3=10984
 oxalic acid dihydrate, diamagnetic susceptibility 1=14073
 oxalic acid, i.r. spectrum, effect of pressure 4=22908
 oxalyl chloridefluoride, C^{13} satellites in n.m.r. spectra 3=15374
 oxalyl fluoride, C^{13} satellites in n.m.r. spectra 3=15374
 oxalylchloride, u. v. absorption spectrum 2=14289
 oxazine dye crystals, absorption spectra 1=14595-6
 oxazine dye radicals, e. s. r. study 2=23008
 oxazoles, absorption spectra, rel. to 1-methylnaphthalene 3=18815
 oxime prep. by N fixation by u.s. waves 1=20759
 5-oxiphenazine, crystal structure 0=4662

Organic compounds—contd

oxy-amines, tertiary, as photog. hypersensitizers 0=12744
oxydiazole-series cpds., opt. and scintillation props. 0=4447
oxygen cpd., H-bond with H halide 3=2629
oxygen quinol clathrates, mol. rot. 2=8075
PBD, luminescence, scintillation 0=4447
PETN, b.p. lowering on thermal decomposition 2=2450
PETN, detonation, hypervelocity wave phenomena 0=16378
PETN low-density pressings, initiation by plane shock wave 1=11621
palmitic acid-stearic acid binary system, structure 0=18369
palmitic acid, u.s. velocity 0=10659
papaverine-Zn[Cd] halides, fluorescence emission spectra 4=13103
paper, varnished, elec. strength at low temp. 2=4101
paracumol, cracking, on Al_2O_3 or zeolites, effect of additives 3=20996
2,2'-paracyclophane, electronic spectrum 3=4773
paradichlorobenzene, n.m.r., dynamic proton polarization 1=11497
paradichlorobenzene, n.m.r., effect of mechanical treatment 4=15680
para-dichlorobenzene, nuclear quadrupole relaxation 4=28908
paradichlorobenzene, nuclear quadrupole relaxation and its temp. dependence 3=25598
paradichlorobenzole crystals, n.q.r. signals 3=6769
paraffin, with Al powder, dielectric anisotropy 1=14544
paraffin, with Cu powder suspended, elec. and mag. props. 1=10074
paraffin, with Cu powder suspended, elec. and mag. props. 1=12470
paraffin, dielectric strength and conduction, effect of aromatics 4=14179
paraffin, as electrolytic cell membrane, NaCl-KCl 4=26757
paraffin, γ -rays backscattering 1=13373
n-paraffin liqs., thermal cond. meas., -100°- +200°C 4=24204
n-paraffin, melting props. 2=14391
paraffin molecules dissolved in CCl_4 , Brownian rotation 4=11160
paraffin, neutron moderation 3=19648
paraffin oils, various viscosities, ion mobility meas. 4=27190
paraffin, p. m. r. in liquid and solid meas. 4=24250
paraffin particles with fatty acids, amines etc., colloids prepn. 3=3417
paraffin, recoilless Rayleigh scattering in, using Mössbauer effect 0=11560
paraffin, rheological study, mechanism of interactions with detergents 0=3158
paraffin, scattering of neutrons 0=12940
paraffin (solid), electron-irradiated, thermally stimulated e.m.f. 1=17642
n-paraffin, spectr. det. of C-H bond moment 2=12339
paraffin, use in γ -radiation protection 4=21823
paraffin wax, effect of 60 kV electrons on crystals 1=2400
paraffin wax, elec. cond. in strong shock waves 0=6073
paraffin wax, electret effects meas. 3=8566
paraffin wax, formation of electrets, effect of alternating fields 0=635
paraffin wax, freezing nucleus size, by u.s. velo. anomalous increase 3=18251
n-paraffinic alcohols, long-chain, mixed monolayers, ideal surface behaviour 4=8518
paraffins, anisotropy by scattering of light 2=6239
n-paraffins, bond polarizability and internal fields 1=12236
paraffins from C_1 to C_{10} , mass spectra, field ionized 3=14524
paraffins, C-H distance 0=14036
paraffins, compressibility and shear viscosity, temp. depend. 3=21309
n-paraffins, crystalline, vibrational spectra, methylene rocking and wagging modes 0=13697
paraffins, density, near meniscus vanishing point 3=21323
n-paraffins in dil. solution, self-diffusion 3=16606
paraffins, e.s.r. of Ag atoms at 77°K 3=15948
n-paraffins, fragmentation model 3=16903
paraffins, ion-molecule reacts. 2=8135
paraffins, long chain, crystals, new habit features 1=7840

Organic compounds—contd

n-paraffins, low-frequency motions, study by neutron scattering 4=12551
paraffins, molecular refractivities at 25°C 2=22989
paraffins, negative ions, by mass spectra 3=11372
paraffins, normal, and dil. solns., molec. optical anisotropy 3=136
n-paraffins, phase transitions at high pressures 1=2747
n-paraffins, quantitative relations in mass spectra 0=20710
paraffins, Raman spectra, relative line intensities 0=85
n-paraffins, Rayleigh line-width, orientational relax. times 3=21366
paraffins, self-diffusion, activation volume 1=4331
n-paraffins, solid phase behaviour, analysis 2=16978
n-paraffins in soln., proton spin-lattice relaxation 4=24251
para-halogeno-styrene, thin films, amorphous, electron diffraction study 3=1368
para- and meta-xylene, liquid, structure, from viscosity meas. 4=11179
para-nitrosodimethylaniline, freq. depend. of scatt. intensity in electronic absorpt. band 4=25713
para-substituted fluorobenzenes, π -electron distrib. and F^{19} n.m.r. shielding 3=8300
para-terphenyl, α -particle scintillation 3=18045
paratoluidine, step growth in supersat. vapour 1=14977
parlodion thin films, transmittance in far u.v. 4=22882
patulin, chromone derivatives, infrared spectra 4=30466
pectin, effect on crystallization of NH_4Cl 0=16262
pentacene, bond lengths 3=1341
pentacene, effect of press. on elec. resist. 2=18701
pentacene-pyrene mixed crystals, emission props 4=30692
pentachloroethane, far i.r. absorption 3=24031
pentacyclic hydrocarbons, ring currents 3=10536
pentadienyl ions, Hartree-Fock calcs., unrestricted, spin props., computation by improved method 4=28174
pentaerythritol, crystal symmetry 4=2008
pentaerythritol, effect of high press. on crystal structure 2=21459
pentaerythritol, effect of high press. on crystal structure 3=3252
pentaerythritol, elastic constants 3=8749
pentaerythritol, electro-optical effect 3=23048
pentafluoropropionamide, e.s.r. of irradiated crystals 4=26395
n-pentane, molecular structure 0=15778
pentane, nuclear spin-lattice relaxation time 1=8136
n-pentane, pool-boiling heat-transfer 3=298
n-pentane, spectral dispersion curves 3=17592
n-pentane, superheat, measurement 1=15850
n-pentane, temp. dependence of vap. press., viscosity and heat of vaporization 0=5215
n-pentane vapour, u.v. absorption and ionization cross-sections, 9-25 eV 3=1932
pentaphenylcyclopentadienyl, proton hyperfine splittings and spin densities 1=7487
 Δ^{α} -pentaenoic acid, isomerization, entropy prod. 0=14098
pentobarbital, γ -rays effects 1=20762
peralkyl ammonium, phosphonium, and sulphonium hydrates, structure 4=7656
perchloryl fluoride, Raman spectra 0=17754
perdeuterobenzene, liquid, molec. reorientation rel. to dielec. relax and n.q. relax. 4=18221
perfluoro and fatty acids, long-chain as etchants 2=8229
perfluoroacetone, reactions with CF_3 radical 2=6880
perfluorobenzene, near-u.v. absorpt. spectrum, 690°-1900°K 4=3887
perfluorocyclobutane, thermal decomposition 4=1318
perfluorodimethyl ether, microwave study 4=22394
perfluoroheptane-i-octane solns., cluster formation 0=3519
n-perfluoroheptane, spectral dispersion curves 3=17591
perfluorohexane, n. m. r., 25° to 130°C, rel. to rot. transition 4=30743
perinaphthene free radical identification by e.s.r. 1=8135
perinaphthyl radical, orbital calc. 2=12274
peroxo-dicobalt ethylenediamine complexes, e.s.r. 4=26424
perylene, absorption and fluorescence at low temps. 2=16867
perylene, in boric acid glasses, photo-ionization by u.v. 0=21290

Organic compounds—contd

- perylene in 2,3 dimethyl naphthalene, fluorescence 3=16042
 perylene-iodine complex, nucl. polariz. 2=16965
 perylene-iodine complex, semicond. props. 2=23304
 perylene, for laser 4=27703
 perylene, lowest electronic transition, strong exciton coupling 4=20249
 perylene, luminescence, dispersed in n-heptane, polarization, electric field effects, 77°K 3=16043
 perylene in 2 methyl naphthalene, fluorescence 3=16042
 perylene, molecular excitation temp. and vibr. specific heat, calc. 4=12493
 perylene-quinone complexes, e.s.r. 2=3669
 petrol, electromagnetophoresis 3=16901
 petrol, flame-front propag. and compression waves in air 0=14696
 petroleum asphalt, glass transition phenomena and rheological properties 1=11589
 petroleum deposits, meteors as sources 3=9165
 petroleum, effect of dissolved O₂ on paramagnetic resonance 1=3571
 petroleum ether, elec. cond., rel. to moisture content 1=18421
 petroleum oil, acoustic impedance in circular tubes 1=11755
 petroleum products, white, flowing, space density of elec. charge 0=14653
 phase transformation, liquid-gas, equation of state 4=367
 phenanthrene with anthracene, luminescence, retarded, mechanism 4=22936
 phenanthrene in biphenyl & fluorene, triplet state e.s.r. 3=1181
 phenanthrene, in boric acid glasses, photo-ionization by u.v. 0=21290
 phenanthrene, charge-transfer complexes, intersystem crossing 4=13100
 phenanthrene and derivs., radiationless conversion in solns. 2=15610
 phenanthrene, e.s.r. of neg. ion 2=14322
 phenanthrene, in heptane and MgO, phosphorescence spectra 4=4319
 phenanthrene, ionization potential and mass spectra 0=3738
 phenanthrene, luminescence, lifetime var. solvent 4=20496
 phenanthrene-naphthalene, optically excited, energy transfer, e.s.r. study 2=21370
 phenanthrene, optical properties, in exciton absorption band region 3=20494
 phenanthrene, phosphorescence at low temp. 3=13211
 phenanthrene, photodepolarization, polarity, in fundamental absorpt. band 3=17906
 phenanthrene, from photolysis of cis-stilbene 3=23551
 phenanthrene, polarization of luminescence 3=3062
 phenanthrene, quasilinear phosphoresc. spectra 4=15374
 phenanthrene, soln. in solid pentane, luminescence spectra 1=17917
 phenanthrene solns., phosphorescence in spectra, at low temp. 2=18876
 phenanthrene, solution in alcohol, luminescence 4=190
 phenanthrene, solutions, delayed fluorescence 3=142
 phenanthrene, spectral solvent shifts 0=16707
 phenanthrene, spectral solvent shifts 2=21910
 phenanthrenes, aryl substituted, as scintillators, u.v. props 0=16710
 o-phenanthroline, phosphorescence spectrum rel. to acid strength 4=8216
 phenazine, absorp. spectrum, 77° to 4.2°K in n→π* transit. region 2=10601
 phenazine, electrical resistance rel. to temperature 1=10037
 phenazine radical ions, e.s.r. 4=12514
 phenazine, semiconducting properties 4=26065
 phenazine semiquinone ion, e.s.r. fine structure 2=15618
 phenol in carbon tetrachloride, n. m. r. relaxation time 4=26263
 phenol crystals, phase-changes, first-order, study using positron annihilation 4=23300
 phenol, first addition of ethylene oxide, base catalysis mechanism 3=20997
 phenol, fluorescence 2=11483
 phenol-formaldehyde resins, improved thermal and dielectric props., by addition of quartz 3=8544
 phenol, free radicals from flash photolysis 0=6413

Organic compounds—contd

- phenol, freezing, nucleus size, by u.s. velo. anomalous increase 3=16851
 phenol, i.r. spectrum 4=12496
 phenol, n.m.r. solvent effects 4=91
 phenol, pi-orbital charge distribution, valence-bond theory 4=6611
 phenol and substituted phenols in polar solvents hydrogen bond, electrostatic model 4=30449
 phenol, water activity coeffs., calc. 4=4721
 phenol red, with membrane blue or Cu oxalate complex, colour changes 4=16377
 phenol, supercooled liquid, u.s. velocity discontinuity at melting point 1=12674
 phenol, u.s. velocity rel. to molecular parameters 1=16403
 phenolic resin-paper laminate I-V characteristics 1=6130
 phenolic resins, dielectric dispersions, freq. and temp. variation 1=17824
 phenolphthalein, vitrification under high press. and temp. 0=10600-1
 phenols, band intensities and structural factors 0=7750
 phenols hindered solvent effects in i.r. spectra 0=8667
 phenolphthalein, absorption, acoustic waves, wedges 3=16717
 phenothiazine elec. cond. rel. to temp. 50°-150°K 3=10446
 phenothiazine oxidation products, e.s.r. 1=16905
 phenothiazine peroxide (quinone), e.s.r. d.f.s., 0=17774
 phenothiazine perchlorate (semiquinone), e.s.r. h.f.s. 0=17774
 phenoxy benzenes, vacuum pump fluids 0=16740
 phenoxy radical in nitrogen matrix, photolysis, 4.2°K 3=2403
 phenyl acetate, nuclear spin-lattice relax. meas. 3=33912
 phenylacetylenes, intensities of C≡C and C=C-H bands 3=10637
 phenyl alcohols, dielec. relaxation, -60 to -20°C 1=9405
 phenyl derivatives, with internal electron transfer, e.s.r. 4=1303
 phenyl ether, microwave relax. 2=6726
 phenyl isocyanate-diethylamine mixtures, nuclear magnetic relaxation 0=16711
 phenyl salicylate liquid state, u.s. velocity and compressibility 1=16406
 phenyl salicylate, u.s. velocity 0=10659
 phenyl salicylate, u.s. velocity rel. to molecular parameters 1=16406
 l-phenylalanine hydrochloride 4=10660
 N-phenylbenzylamine crystals, phase-changes, first-order, study using positron annihilation 4=23500
 phenylpyreneoxazine scintillator, neutron detect. efficiency 3=2276
 m-phenylenediamine absorpt. and luminesc. spectra 0=14749
 p-phenylenediamine-chloranil complex, semiconducting properties 0=16621
 p-phenylenediamine, electronic structure calc. 1=6115
 n-phenylenediamine, Raman spectra and phase changes 0=5946
 l-phenylhydantoin, crystal study 4=4346
 phenylpropionic acid and derivs., spectra, C=C, C=O bands 4=26714
 pheophytin a, monomolecular films 4=3447
 pheophytin absorption and luminesc. spectra of solutions 0=16640
 pheophytin, absorption spectrum and polarization of fluorescence 1=5065
 phosphorescence, anti-Stokes 1=6036
 phosphors, activated with fluorescein, tryptamine, auramine, n-phosphorescence 3=1663
 phosphors, energy transport 0=1570
 phosphors, phosphorescence quenching, -163° to -140°C 4=1683
 phosphors, in scintillation counting 1=7179
 phosphors, triplet states, e.s.r. invest. 3=5065
 photochemical formation, in simple gas mixtures 3=1615
 photoconductivity, hole mobility in molecular crystals 4=3686
 photoconductivity of polymer films 1μ thick 3=25420
 photofluorescence, decay times and quantum efficiencies 2=720

Organic compounds—contd

- phthalic acid, in alums, phosphorescence, -183° to $+125^{\circ}\text{C}$ 3=23116
 phthalic acid, powder, reflection spectra, rel. to absorbed layer 3=23062
 phthalimide-activated boron phosphors, transitions to meta-stable states 1=14643
 phthalimide cpds., limiting polarization rel. to electronic transition frequency 3=2635
 phthalimide derivatives, dipole moments in first excited singlet state 3=20010
 phthalimide derivatives, radiationless transitions, potential barrier 4=1284
 phthalimide derivatives, solid sol., polarization of fluorescence 0=10054
 phthalimide derivs., first and second excited states 3=4739
 phthalimide derivs. in liq. soln. spectra rel. to molec. interacts. 2=18472
 phthalimide mixed with light gas, intermolec. interact. rel. to temp. 2=16567
 phthalimide, spectrum, u.v., in alkaline solns 4=9759
 phthalimides, in different solvents, luminescence 2=17474
 phthalimides, electronic spectra 2=14291
 phthalimides, polarization of fluorescence 2=57
 phthalocyanine, charge carrier diffusivity 1=11307
 phthalocyanine, α and β , photoconductivity 4=1891
 phthalocyanine, carrier transport, applicability of band model 3=22680
 phthalocyanine complexes, spectra and photoconduction 2=18751
 phthalocyanine, conductivity rel. to phase transformations 3=10873
 phthalocyanine crystals, photoconductivity 3=23019
 phthalocyanine crystals, spectra, absorpt., polarization 3=20495-6
 phthalocyanine dyes, e.p.r., impurity $g = 2$ lines 3=20653
 phthalocyanine, effect of 60 kV electrons on crystals 1=2400
 phthalocyanine, elec. cond. of α and β forms, 10^5 ratio 1=14393
 phthalocyanine, elec. conductivity at high freq. and press. 4=26067
 phthalocyanine, frozen crystalline solution, emission and absorption spectra 4=7163
 phthalocyanine, mechanism of photoconductivity 0=6144-5
 phthalocyanine and metal derivs., electron diffraction lattice image problem 4=23508
 phthalocyanine, metal-free crystals, bulk currents 3=8528
 phthalocyanine, metal-free, elec. and thermoelec. props. 4=12923
 phthalocyanine, metal-free, Hall effect meas. 2=16730
 phthalocyanine, optical absorption of metal-free crystals 3=10971
 phthalocyanine, optical and photoelec. props. 2=16825, 18829
 phthalocyanine, photocond., rel. to temp. 2=21197
 phthalocyanine, photoconductivity of metal-free crystals 3=10890
 phthalocyanine with uranyl complex, luminescence 3=20534
 phthalocyanines, absorption and fluorescence spectra 1=7707
 phthalocyanines, absorption and fluorescence spectra 1=11361
 phthalocyanines, absorption spectra 3=18013
 phthalocyanines, e. s. r. rel. to semiconducting props. 4=10335
 phthalocyanines, pressure effect on optical absorption 1=17889
 phthalocyanines, rectification props. 3=17916
 phthalocyanines, evaporated films, photoconductivity kinetics 0=20936
 phthalocyanines, rectifiers 4=20394
 phyllochlorine ester, crystal struct. 0=4617
 π -electron crystals, rapid triplet excitn. migration 3=3058
 4-picoline, N^{14} n.g.r. 2=14861
 2-picoline N-oxide, photolysis 2=15156
 4-picoline, nuc. quadrupole coupling 3=2656
 4-picoline, nuclear quadrupole resonance 1=12575
 β -picoline-water, non-stratifying system, anomalous light scatt. 4=24216
 β -picoline-water, non-stratifying system, scatt. indicatrices 4=24215
 β -picoline-water solns., conc. fluctuations, light scatt. study 3=21365

Organic compounds—contd

- picryl-N-aminocarbazyl 4=28884
 picryl-N-amino-carbazyl, e.s.r. linewidth rel. to temp. 2=10703
 picryl-n-amino carbazyl, exchange-ordering and forbidden spin resonance transitions 1=11483
 picryl amino carbazyl, free radicals, magnetic transitions 1=17364
 picryl amino carbazyl, n.m.r. Overhauser effect 1=17358
 pigments, mixture data 0=14857
 pinacryptol, films on Ni, photoelec. emission 0=19718
 pinacyanol, films on Ni, photoelec. emission 0=19718
 pinacyanol, films, photocond., surface recomb. 1=3783
 pinacyanol, photoconductivity 0=1684
 piperidine hydrochloride, crystal structure 0=6366
 in planetary atmospheres 2=17259
 plastic crystals, crystallographic transition, thermal 2=10901
 plastic scintill., scintillation light yield for α and β -rays 4=13093
 plastic scintillator with anthracene derivatives, photoluminescent characteristics 0=9235
 plastic scintillator solns, efficiency and spectra 4=16735
 plastic scintillators, effect of solvent and solute structure on pulse heights 1=6236
 plastic sheets, u. s. absorpt. 4=2787
 polar liquids, permittivity, temp. depend. 1=8133
 polar molecules in non-polar solvents, relaxation times 0=5009
 polar soln. mixtures, mol. interactions, from dielectric const. and refractive index 4=10637
 polyacene mono- and dinegative ions, electronic transitions 4=20093
 polyacenes, electronic structure, self-consistent field calc. 4=15375
 polyacenes, triplet-singlet transits., polariz. 2=20857
 polyacrylonitrile-AgNO₃ complex, i. r. spectra 4=12509
 poly-DL-alanine, proton magnetic resonance, 250°K , rel. to side-chain reaction 4=3913
 poly-DL-alanine, 250°K , rel. to side-chain reaction 4=3913
 polyalcohols, r.f. absorption spectra 1=2768
 polyatomic molecules in solutions, electronic spectra 2=14294
 polyazine anion radicals, e.s.r. meas. 4=1304
 polycarbonate resins, dielec. props., α -, β - and γ -absorption peaks meas. and origin 4=30648
 polycarboxylic acid, hydration-dehydration 1=15865
 polycyclic aromatic hydrocarbons, bond order calculations 1=7480
 polyene compounds, resonance Raman effect 0=2175
 polyene, Raman spectra 0=9816-17
 polyenes, cyclic, bond alternation 2=8121
 polyethylene, crystallization kinetics, influence of prep. 1=20423
 polyethylene, evaporation, mass spectrometric study 1=13025
 polyethylene, extension of Eyring-Ree theory of flow 1=18367
 polyethylene single crystals, recryst. rate in hot liqs. 1=20424
 polyethylene, use in megarad dosimetry 1=4837
 polyglycine ($N^{14} \rightarrow N^{15}$), vibrational freq. shifts, isotope effects 4=23213
 polymers, long chain, crystals, new habit features 1=7841
 polymethyl methacrylate, β -relaxation, stress relax. and creep, activation energies, theory 4=28922
 polymethylmethacrylate, crack growth, kinetics 1=20387
 polymethyl methacrylate plates, rel. to electron beam ($> 1 \text{ MeV}$) meas. 4=29975
 polynitroalkanes, vibrational spectra, analysis 4=9760
 polynucleotides, energy band structure calc. in Hückel approx. 4=20140
 polypeptides, synthetic, solid, dielectric studies 4=12966
 polyphenols, excess electron and hole band structures 4=1430
 polyphenyl acetylenes, effect of molec. wt. on luminescence 0=20995
 polyphenyl ethers, as vacuum pump fluids 0=16740
 polyphenyls, bond orders, mobile, calc. using SCF-LCAO-MO theory 4=22413
 polyphenyls, reactor coolants, nucleate boiling 0=13359
 polyphenyls, frozen cryst. solns., absorpt. and emission spectra 4=10205

Organic compounds—contd

- poly (4-vinyl pyridine), quaternization with n-butyl bromide, steric hindrance 4=7741
 polysiloxanes, isoviscous, various props. 2=11350
 polysiloxanes, and mutual solns., u.s. vel. and compressibility 1=15872
 polysiloxanes, viscosity, density, u.s. vel., compress. 2=11351
 polystyrene, isotactic, characteristic bands in i.r. spectrum 1=17902
 polystyrene, optical properties, orientation functions 1=10093
 polystyrene, solution in benzene, u.s. absorption 1=6938
 polystyrol, crack growth, kinetics 1=20387
 polyvinyl chloride, dynamic mechanical props. during gelation 1=18349
 polyvinyl chloride, e.s.r. 1=20200
 polyvinylalcohol, irradiated, paramagnetic resonance spectra 1=20226
 polyvinylalcohol-rhoduline orange, luminescence 1=14647
 porphyrin complexes, Kuhn electron gas model, ring form 0=9814
 porphyrin, absorption spectrum and polarization of fluorescence 1=5053
 porphyrin charge-transfer complexes with sym-trinitrobenzene 3=2651
 porphyrin cpds., limiting polarization rel. to electronic transition frequency 3=2635
 porphyrins, fluorescence polarization 3=2650
 porphyrins, luminescence 0=10064
 porphyrins, luminescence 3=9467
 porphyrins, molec. symmetry and fluoresc. polarization 0=9829
 porphyrins, nuclear magnetic resonance 0=4222
 porphyrins, spectroscopy 3=25129
 potassium ethyl sulphate, rotativity 1=12880
 powders mixed with naphthalene, Raman spectra 4=26170
 product of N₂-chlorinated hydrocarbon reaction, light emission 1=20731
 L-proline monohydrate, cell size and space group 0=3250
 propane, absorption of slowed-down π^- , data analysis 4=19568
 propane, adsorption on Hg surface 2=1126
 propane-air flame, sparking potential 4=16454
 propane-argon mixtures, electron cascades 0=7248
 propane, breakdown, between plane electrodes, rel. to press. 3=4091
 propane, bubble chamber appl., bubble density 2=248-9
 propane-d₂, vapour-phase radiolysis 2=19166
 propane-d₈, radiolysis 3=18457
 propane, dependence of mass spectrum on electron voltage 1=3575
 propane, dissociative charge exchange with rare-gas ions 4=3920
 propane, flames, recombination of ions 1=11914
 propane, fragmentation by electron impact 2=2030
 propane, γ -radiolysis 0=16387
 propane, γ -radiolysis, effect of elec. fields 4=29233
 propane, gas-phase radiolysis 2=17097
 propane gas, slow-neutron scatt. 2=3764
 propane, in H₂ and N₂, detection by thermal cond. 0=16402
 propane, ion dissociation cross-sects., for Ne atom collisions 4=28274
 propane, ionization by electron impact 2=13533
 propane, ions formed at different temperatures 1=9525
 propane, mass spectrum 0=3741
 propane, mass-spectrum, fragment ions, initial energy 2=9655
 propane, mixtures with H₂, potential parameters, from viscosity 1=14122
 propane, molecular yields in radiolysis 0=16385
 propane, neutral decomposition products, mass-spectra analysis 1=9963
 propane-O₂-N₂ mixtures, speed of detonation 3=3395
 propane, oxygen explosions, within gas boundary 2=4542
 propane, photocond. and photoionization 4=27189
 propane, proton magnetic resonance 0=4227
 propane, proton resonance spectra 4=30073
 propane, radiolysis, inhibition of Ar-sensitizing by H 3=8977
 propane, radiolysis, rare-gas sensitized 3=3409

Organic compounds—contd

- propane, ranges of protons and mesons 1=19201
 1-C¹³-propane, reaction with H atoms 3=20989
 propane, reactions with Hg(¹⁹⁹Pt), D isotope effect 3=8973
 propane, 24 litre bubble chamber 0=3898
 propane, vac. u.v. photolysis 2=23969
 propane vapour, u.v. absorption and ionization cross-sections, 9-25 eV 3=1932
 propanol, diffusion of polybutylmethacrylate 0=14636
 n-propanol mol., dissociation and mass-spectra 4=6652
 propanol, Rayleigh scattering depolarization factor meas. 0=19450
 n-propanol, self-diffusion at 25°C 0=14632
 1-propanol-2-methylpentane, dielec. relaxation 3=23898
 propargyl bromide, second-order quadrupole effect in r.f. spectrum 0=2744
 propargyl halides, force consts. and normal vibrations 4=25716
 propene, thermodynamic props. 0=1064
 propionaldehyde, microwave spectrum 4=17308
 propionic acid, n.m.r. study of structure 0=18231
 propionic acid, r.f. absorption spectra, dielectric constant 1=12804
 propionitrile, thermal props. 2=5222
 n-propyl alcohol, acoustic streaming, viscosity ratio 0=6880
 n-propyl alcohol-glycerol, u.h.f. dielec. props. 1=1751
 n-propyl alcohol, Raman spectra 2=8099
 n-propyl alcohol, sound velocity meas. 4=8206
 n-propyl, of Cd, Sn, Hg, Pb, n.m.r., 25 Mc/s satellite line analysis 3=22598
 n-propyl chloride, microwave spectrum, 2 rotational isomers 3=25130
 propyl fluoride, rotational isomerism and microwave spectrum 2=18473
 9, 10-di-n-propylanthracene, fluorescence and photo-oxidation quenching 2=721
 propylene-argon system, liq.-vapour equil. 4=11410
 propylene, incandescent reaction with Nb 3=13605
 propylene-iodine system, thermodynamics 2=17080
 propylene oxide, heat capacity, at low temp., and rel. thermodynamic functions 4=22496
 propylene, photoionization and vac. u.v. absorption 2=6178
 propylene, r_g structure, bond lengths 1=17371
 propylene, reaction with HI 2=21582
 propylene, sulphide microwave spectrum 3=20009
 propylene sulphide, n.m.r. spectrum 2=18486
 propylene vapour, u.v. absorption and ionization cross-sections, 9-25 eV 3=1932
 4, 4-di-n-propyloxy-azoxybenzyl, dielectric dispersion 2=7226
 propynal, vibration and rotation 2=539
 propyne, absorption and photoionization coeffs., 1050-2000 Å 4=8616
 propyne, Hg-photosensitized decomp. 4=4708
 proto naphthalene in durene and biphenyl, triplet state e.s.r. 3=1181
 protoporphyrin, absorption and fluorescence spectra 1=7707
 protoporphyrin, absorption and fluorescence spectra 1=11361
 pseudo-ferromagnetism 2=14766, 16896
 pump oil, effect on ZnS film adhesion to glass and silica 0=14087
 purification by zone refining 0=6329
 purines, single crystals, polarized absorption spectra 3=25131
 purity determinations using adiabatic calorimeter 0=16924
 pyracene, e.s.r., 2nd order splitting and coupling const. 2=20861
 pyracene ions, e.s.r., h.f.s., hyperconjugation mechanism 3=22591
 pyrazine, e.s.r., N¹⁴ h.f.s. 3=8295
 pyrazine, elec. dipole nature of 3700 band 4=20092
 pyrazine, in hydrocarbon and EPA glasses, solvent effects on n → π^* transitions 0=15742
 pyrazine, ions, spin density from e.s.r. spectrum 2=3777
 pyrazine, ions, spin density and hyperfine coupling 2=22995

Organic compounds—contd

pyrazine, $n \rightarrow \pi^*$ transitions, excitation transfer splitting 1=12292
 pyrazine, single-triplet transitions, role of ground state 3=8245
 pyrazine, spectrum, ground-triplet transitions and mixing 3=22588
 pyrazine, vibr. freqs. rel. to spectrum 4=22411
 pyrene anion, e.s.r. spectra 3=8310
 pyrene, in boric acid glasses, photo-ionization by u.v. 0=21290
 pyrene, cryst. and liq., electronic transport 2=23256
 pyrene, delayed fluorescence 3=13212
 pyrene, derivs. in frozen solns., luminescence 2=18871
 pyrene in ethanol, luminescence, delayed and normal, spectra 3=14174
 pyrene, fluorescence and absorpt. spectra at 20° and 4°K 4=10235
 pyrene, fluoresc. in micelle soln. 4=14176
 pyrene, ionization-dissociation processes caused by electron impact 4=28248
 pyrene, luminescence, in isopentane, 77°K, delayed, and excimers 4=10234
 pyrene, luminescence, two-photon, laser excitation 3=11002
 pyrene monocrystals, polarized light absorption, 20°K 1=11384
 pyrene-perylene, fluorescence 2=8584
 pyrene, polarization of first two electronic transitions 0=15755
 pyrene, polymerization of styrene 0=8317
 pyrene in solid hydrocarbons, fluorescence 1=10127
 pyrene solid molecular complexes, photo-conductivity 4=7079
 pyrene, in soln., excimer fluorescence 2=11376
 pyrene, soln. in solid pentane, luminescence spectra 1=17917
 pyrene, solutions, spectra, changes on addition of ferric acetylacetonate 3=15359
 pyrene, spectra, 4000-400 cm^{-1} 3=25468
 pyrene, spectrum, in fluorene lattice, and polarization of first two singlet states 4=22410
 pyrene-tetracyanoethylene complex, polarized absorption spectrum 4=22909
 pyrene, two-photon capture cross-sections, SCF-MO calc. 4=28250
 pyrene in 2,3 and 2,6 dimethyl naphthalene, fluorescence 3=18042
 pyridazine, i.r. spectra, solvent shift 1=8123
 pyridazine, $n \rightarrow \pi^*$ transitions, excitation transfer splitting 1=12292
 pyridazine, single-triplet transitions, role of ground state 3=8245
 2-pyridenes, proton n.m.r., strong coupled AA'KL system 3=4780
 pyridine, acoustic and mech. props. 2=15586
 pyridine, adsorption by Ge surfaces 0=12115
 pyridine derivatives, n.m.r. chemical shift measurements 1=12903
 pyridine and deuteropyridines, vibr. spectra, calc. and interpretation 4=9761
 pyridine, and deuterioisomers, coordinates of planar vibrations 3=8293
 pyridine in diff. solvents, Raman spectra 0=942
 pyridine, effect on fluorescence of acetylanthracene in hexane 1=9400
 pyridine, electronic structure calc., Pariser-Parr approx. validity 4=15323
 pyridine, FEMO calculations 1=9936
 pyridine, frozen, X-ray anal. 0=6370
 pyridine, i.r. absorption bands, widths and profile 0=20614
 pyridine, ionization potentials from Rydberg series observations 1=7478
 pyridine-Mn halogenated complexes, fluorescence 0=16088
 pyridine, N-H stretching and deformation freqs. 2=7219
 pyridine, N¹⁴ n.q.r. 2=3687, 14861
 pyridine N-oxide, photolysis 2=15156
 pyridine, nuc. quadrupolar coupling 3=2656
 pyridine, π -electron suscept., calc. 2=6215
 3-pyridine, proton magnetic resonance 2=2023
 pyridine, pyrrole, and other N cpds., N electro-negativity parameter, LCAO calc. 0=20682

Organic compounds—contd

pyridine, single-triplet transitions, role of ground state 3=8245
 pyridine, spectral symmetry, 1500-2000A 2=6176
 pyridine, spectrum, ground-triplet transitions and mixing 3=22588
 pyridine type mols. complexed with paramag. Ni(II) and Co(II) acetylacetonates, n.m.r. 3=25144
 pyridine, u.s. dispersion, molecular structure 3=21354
 pyridine, u.v. absorption spectra 0=6804
 pyridines, dipole moments 0=5985-6
 N-3-pyridylsydrone, photochromism 2=2452
 pyrimidine, crystal and molec. structure 0=8230
 pyrimidine, FEMO calculations 1=9936
 pyrimidine, $n \rightarrow \pi^*$ transitions, excitation transfer splitting 1=12292
 pyrimidine, spectral symmetry reduction, 1500-2000A 2=6176
 pyrimidines, single crystals, polarized absorption spectra 3=25131
 pyrocarbons, e.s.r. 3=13305
 pyrrol, thermodynamic functions calc. from spectroscopic data 0=13433
 pyrrole, electronic structure calc., Pariser-Parr approx. validity 4=15323
 pyrrole, improved LCAO method 3=4774
 pyrrole, proton resonance spectra analysis 2=6220
 p-quaterphenyl, elect. conduct., space-charge-limited 2=2130
 quaterphenyl, fluoresc. by α -rays, polarization 4=20503
 p-quaterphenyl, prep. of thin single crystals 2=4386
 quaterphenyl in scintillation chamber 3=4296
 p-quaterphenyls, as scintillators, u.v. props. 0=16710
 quinhdrone, intermolecular forces, nature 1=14089
 quinidine salts, luminescence and ionization 0=6198
 quinine bisulphate, fluoresc. quantum efficiency 1=15890
 quinine and quinidine, optical rotation, effect of irradiation by 2 MeV electrons 1=11355
 quinine salts, luminescence and ionization 0=6198
 quinine sulphate, electron emission -100° to 300° C 1=18915
 quinine sulphate, fluorescence decay time measurement 1=11834
 quinine sulphate, light scattering by fluorescence 1=5282
 quinine sulphate solutions, light scattering 1=145
 quinizarin, radical, anion, e.s.r. and H-bond 3=17610
 β -quinol clathrate with occluded CO, thermodynamics and hindered rotation 4=15376
 β -quinol clathrate, paramag. res. trapped O₂ 1=19664
 β -quinol clathrate, quadrupole resonance of trapped N₂⁴ 0=11961
 quinol clathrate, trapped Kr⁸⁵ as β source 0=4051
 β -quinol clathrates of N₂, CO and CH₄, N₂, CO, CH₄ motion, 15-100°K 3=8284
 quinoline, acoustic and mech. props. 2=15586
 quinoline phosphomolybdate, decomposition, thermogravimetric anal. 0=14574
 quinoline solns., absorption and phosphorescence spectra 0=5949
 quinoline, u.s. dispersion, molecular structure 3=21354
 quinonemethide, molecules, apparent asymmetry, by n.m.r. 3=20003
 quinones, effect of pressure on resistance 2=18701
 quinoxaline, phosphorescent state, e.s.r. study 4=7335
 quinoxaline solns., absorption and phosphorescence spectra 0=5949
 RDX, explosion growth 1=11620
 radicals, bond dissociation energy rel. to ionization potential 4=9777
 radicals, bond dissociation energy rel. to (ionization potential-electron affinity) 4=9777
 radicals by h.f. discharge in aromatic vapours, absorption and fluorescence spectra 0=6199
 radicals, in liquids, spin-lattice relax. 2=60
 radicals, in liquids, spin-lattice relaxation 3=3817
 radiolysis, inhibition 2=4558, 8927
 Raman effect relationship with elect. band spectra 0=4209
 Raman resonance effect, 73 substances 0=2175
 Raman spectra of C = O, C \equiv N and C \equiv C groups 2=15596-7
 Raman spectra, conjugation effects on intensity 1=14032
 Raman spectra, crystalline powders, compared with solutions 3=6650

Organic compounds—contd

- rare earth ($\text{C}_2\text{H}_3\text{SO}_4$), $\cdot 9\text{H}_2\text{O}$, paramag. relax., low temp. var. 4=17677
 rare earth org. chelates, in solution, 77°K, nonexponential decay of luminescence 4=28754
 refractivities of covalent bonds 1=14075
 resins, ion-exchange, pore size 2=8873
 resins, synthetic, non coincidence of optical and mechanical singularities 4=26461
 resorcin-gelatin, interfacial tension 0=14614
 resorcinol, elec. and elastic props. 0=633
 L-rhamnose monohydrate, growing, dielec., piezoelec. and elastic props. 0=13650
 rhodamine B in glycerin, concentration-depolarization of fluorescence 0=4423
 rhodamine B, decoloration by pH changes 3=23536
 rhodamine B, photoluminescence quenching 1=12886
 rhodamine B in Plexiglas, fluorescence polarization 1=7723
 rhodamine B, sensitized fluorescence 1=2763
 rhodamine B and 6G in glycerine and polymethyl methacrylate, reflection symmetry 2=19566
 rhodamine B, 6G, in polymethyl methacrylate, fluorescence polarization 3=15713
 rhodamine B solns., quenching of sensitized fluorescence 1=4350
 rhodamine B, spectrum, influence of solvent mixture of MAM or ethanol 3=21378
 rhodamine B and 6G, spectra of solns., in mono- and PMMA 2=9281
 rhodamine B solns., fluorescence quenching 2=9283
 rhodamine B and uranin, anti-Stokes excitation of fluorescence 0=88
 rhodamine dye, luminescence, active and nonactive absorption separation 3=18822
 rhodamine 6G in aniline, optical consts. meas. in strong absorpt. region, use of layers 4=8208
 rhodamine, solutions in glycerine, depolarization of fluorescence 1=9397
 riboflavin, absorption spectra change on addition of amino-acids 3=8954
 riboflavin, interaction with amino-acids 3=8954
 Rochelle salt, dielec. const. at 10 Gc/s rel. to temp. 4=26127
 Rochelle salt, ferroelec. crystal structure, radiation effects 4=7050
 rod-like mols., sedimentation in ultracentrifuge 3=11361
 rosin, dielec. props 0=6153
 rosin, dielectric properties at 8.7 mm 0=18090
 rosin, vitrification under high press. and temp. 0=12060-1
 ruthenocene- Ru^{103} synthesis by ferrocene + U fission 1=20736
 S-containing cyclic cpds., molecular structure 1=14115
 saccharose, X-irrad., paramag. centre prodn. and decay 2=12823
 salicylaldehyde-ethylenediimine copper (II) complex, crystal spectra 1=11373
 salicylic acid, molec. vibr., X-ray meas. 4=30511
 salicylidene aniline crystals, piezoelectricity 4=22781
 salol, crystal growth from melt, mechanism 4=26605
 salol, supercooled liquid, u.s. velocity discontinuity at melting point 1=12876
 salol, u.s. propagation constants 0=10723
 salol, u.s. velocity, normal and super-cooled, temp. depend. 0=6789
 sarcosine hydrochloride, and ester, protolysis kinetics 2=17083
 saturated hydrocarbons, indirect nuclear spin-spin couplings 1=7491
 saturated hydrocarbons, photolysis, theory 4=29230
 saturated hydrocarbons, proton-transfer reactions with H_3^+ 4=23622
 saturated ring ketones, carbonyl stretching vibrations 1=14009
 scintillation process, in crystals and solutions 1=2459
 scintillation process, energy origins 1=2460
 scintillation in pure crystals, theory 4=26232
 for scintillation counters, new 4=3240
 scintillators, liquid, quenching kinetics 2=15667
 scintillators, luminescence time meas. 4=14961
 scintillators, mode of action, theory 0=13702
 scintillators, monocryst., anisotropy rel. to α -rays 2=726

Organic compounds—contd

- scintillators, 1-12 keV electron response, meas. and energy depend. 1=1185
 sec-butyl acetate, photolysis 2=23968
 sec-butyl radicals, collisional energy transfer with molecules 3=12879
 sec-butyl radicals, collisional energy transfer in rare gases 3=12878
 sec-butyl radicals, produced by chem. activation 3=8965
 Sec-butyl radicals, vibr. deactivation 4=3929
 sec-butyl systems, D substituted, chemically activated, isotope effects, secondary 4=22432
 sec-butyl-d, radicals, vibrationally excited, collisional deactivation 0=17739
 sec-propyl ions, hydride and proton transfer 4=13712
 seedlac, dielectric properties at 8.7 mm 0=18090
 semiconducting, photoelectric emission 4=574
 semiconductivity 1=7654
 semiconductivity 1=7655
 semiconductor dyes, dark elec. cond. and long-wave absorption 0=13619
 semiconductors, conference, Chicago (1961) 4=22727
 semiconductors, elec. cond. cell for cond.: temp. meas. 4=28577
 semiconductors, electron mobilities, calc. from band and hopping models 4=15445
 semiconductors, impurity effects, theory 4=26066
 semiconductors, management appraisal 4=26061
 semiconductors, narrow-band, transport coeffs. 4=12920
 semiconductors, resistivities of 30 complexes 0=15969
 semiquinone radicals, g -values, structure depend. 1=14090
 semiquinone solutions, dynamic nuclear polarization 3=23908
 semiquinone-type molecular complexes, semiconductivity 1=7655
 semiquinones, in aprotic solvents, e.s.r. 2=17486
 semiquinones, C^{13} e.s.r. hyperfine interactions 3=22589
 semiquinones, C^{13} hyperfine splitting in e.s.r. spectrum 1=19663
 serum albumin, elec. props. 0=15970
 shellacs, dielec. props. meas. at 3 cm and 8 mm 4=26110
 short-lived transients in radiation chemistry 0=16383
 silica gel, small- and intermediate-angle X-ray scatt. 2=6862
 silicone dielectrics, γ -irradiated 0=2173
 silicone, dimethylpolysiloxamic, elastic rebound of steel balls 4=147
 silicone, liquid scintillant 0=5032
 silicone oil films, 350-5000 Å, insulation 3=21388
 silicone oils, X-ray induced elec. cond. 4=29640
 silicone, rolling friction 0=4572
 silicone, vacuum apparatus, contaminant 3=14229
 silicone varnish films, elec. cond. equilibrium approach 4=20413
 silicones, proton magnetic resonance 0=5998
 siloxanes, density and short-range coordination 2=21893
 siloxanes, liquid, surface tension and intermolec. interaction 2=23016
 siloxanes, 2-component solns., density 2=21906
 silyl acetylene, microwave spectrum and structure 3=25132
 soap films, damping of oscillatory motion 1=4318
 soap films, scattering, light, due to thermal corrugations, interfacial correlation effects 4=11171
 soap solutions, elasticity and surface tension of films 1=15828
 soaps, film formation and rupture 0=931
 soaps and resins, effect on elec. breakdown of liquids 1=15898
 sodium acrylate, polymerisation, crystal shapes 4=15842
 sodium lauryl sulphate, monolayers, viscosity studies 1=15782
 sodium salicylate, films, u. v. fluorescence, thickness depend. 4=29756
 sodium salicylate, layers, preparation method 4=13675
 sodium salicylate, fatigue effects on luminescent yield 4=20506
 sodium salicylate, luminescence, u.v. 4=22932
 solid solutions, solubility, structure 1=14934
 solids containing methyl groups, proton resonance, methyl group reorientation 1=10197
 solids, irradiated, dissolution in dosimetric liqs. obs. 1=20760
 solids, irradiated, luminescence in fluorescent liqs. 1=18415

Organic compounds—contd

solids, irradiated, photoluminescence excitation spectra, 77°K 4=1416
 solids, u.s. velocity 1=6857
 solution charge-transfer complexes, microwave relax. and structure 4=2699
 solutions, aq., dielec. const., temp. and conc. depend., calc. 0=3528
 solutions in CS₂, dilute, dielectric constants and loss factors, -30° to 20°C, rel. to relaxation 4=198
 solutions, energy transfer, solute-solute 1=8401
 solutions, energy transfer, spectral effects 1=9402
 solutions, fluorescence depolarization, by Brownian motion and molec. vibr. 1=2760
 solutions, intermolecular free lengths 4=18195
 solutions, luminescence and Cherenkov radiation, X- and γ -ray excited 0=19158
 solutions, luminescence quenching, "sphere of influence" 1=18416
 solutions, luminescence quenching, "sphere of influence" 2=1155
 solutions, luminescence, u.v., ionizing rad. excited, quenching 4=24221
 solutions, luminescent, for scintillators, non-radiative transfer 3=10001
 solutions, phosphorescence duration, at -196°C 1=3866
 solutions, resonance fluorescence, diffusion theory 0=53
 specific heat and enthalpy, 8 subst., 1-300°K 1=910
 spectra, electro-optical parameter theory, H-D isotope effects 3=25114
 spectra, quasilinear, obtained at low temp. and in paraffin solid solutions 3=18012
 spectra, triplet state absorption in solutions 4=8214
 spindle oil soln., viscosity study 0=916
 spiropyran, photo-isomerization to merocyanine 1=10297
 squalene, radiolysis 0=6417
 stannohydrocarbons, ene-yne, vibration 2=16547
 starch-iodine complex, metallic nature 1=19670
 starch-iodine complex, model, (HI₃·2C₆H₅CONH₂), crystal structure 4=13619
 stearic acid adsorbed on stressed metal surfaces, birefringence 3=4962
 stearic acid, adsorption by mica, Fe, Cu, Au 3=8931
 stearic acid, B- and C-forms, thermal expansion, X-ray study 0=18368
 stearic acid, molecular motion in film separating sliding steel surfaces 1=1354
 stearic acid, monolayer orientation on Ag crystal 0=10372
 stearic acid monolayers, effect of benzene and hexane spreading solvents 0=10371
 stearic acid, oleophobic monolayers on mica 0=1947
 stearic acid-palmitic acid binary system, structure 0=18369
 stearic acid u.s. velocity 0=10659
 stearic acid, X-ray temp. diffuse scattering 1=9969
 stearyl alcohol films coating water surfaces, evaporation 0=16922
 steatites, dielectric properties at 3.15 cm and 8.7 mm 0=18090
 stilbene, α -irrad., scintillation light yield 1=5057
 stilbene, cis, luminescence, u.v. excited 4=10236
 stilbene crystals, α -particles and protons, space charge discrimination 4=9323
 stilbene and derivs., absorpt. and fluoresc. spectra 3=735
 stilbene, for fast neutron spectrometry 4=6084
 stilbene, fluoresc. by α -rays, polarization 4=20503
 stilbene, frozen cryst. solns., absorpt. and emission spectra 4=10205
 stilbene, γ -scintillation luminescence yield 0=4451
 stilbene, i.r. dispersion and absorption 1=11382
 stilbene, luminescence excited by α -particles, intensity of slowly decaying component 1=6238
 stilbene, luminescence, particle discrimination 2=22360
 stilbene, luminescence polarization 0=656
 stilbene, luminescence polarization, under β -ray excitation 1=20025
 stilbene, luminescence polarization, rel. to excitation-energy migration 3=11000
 stilbene, luminescence at 20°K 0=4450
 stilbene, molecular vibr., from spectrum, in CCl₄ 4=12510
 stilbene, as neutron detector 3=4411
 stilbene, in octane, fluoresc. and absorpt. spectra 2=23609

Organic compounds—contd

stilbene, 1-17 μ absorption, frequencies and intensities 4=15607
 stilbene, optical consts. meas. and calc. 0=4263
 stilbene, particle discrimination rel. to temp. and energy 4=5887
 stilbene, photodepolarization, polarity, in fundamental absorpt. band 3=17908
 stilbene, π -electronic u.v. spectra 3=25133
 stilbene, scintillation crystal as fast neutron spectrometer 0=20161
 stilbene, scintillation light yield for α and β -rays 4=13093
 stilbene scintillator, γ -ray spectrum, in high elec. field 4=10227
 stilbene soln. in n-octane at liq. H₂ temp., absorpt. and luminescence spectra 4=5187
 stilbenequinone, molecules, apparent asymmetry, by n.m.r. 3=20003
 stilbene-tolan crystals, luminescence and absorption, 20°K 1=11376
 stilbene-tolane with naphthacene impurity, absorpt. and luminesc. 2=6568
 strychnine, diamag. susceptibility 1=20052
 styrene, ionic polymerization by γ -irradiation 1=15203
 styrene, n.m.r. of vinyl group, calc. 0=1507
 styrene, nuclear spin-spin coupling of protons 1=2499
 styrene, polymerization, n.m.r. invest 2=4544
 styrene polymerization spectra, with Li, Na, K, in solns. 4=25796
 styrene, Raman spectrum, stimulated, combination lines 4=20094
 styrene, u.s. dispersion, molecular structure 3=21354
 4-styrylstilbene, fluorescence quantum yields 0=16098
 substituted benzaldehyde an ions, rotational, e.s.r. study 3=15373
 substituted cyclobutane anions, e.s.r. 4=25726
 succinic acid, diamagnetic susceptibility 1=14073
 succinic acid, free radicals by irradiation, e.s.r. study 2=3180
 succinic acid, irradiated, e.s.r. hyperfine structure 1=10184
 β -succinic acid, radiation damage 0=13572
 succinic acid, temp. depend. of diamag. anisotropy 4=7213
 succinimide, diamagnetic susceptibility 1=14073
 succinonitrile, dielectric dispersion and relaxation in liquid and solid 0=4385
 succinonitrile, molecular rotational relaxation 1=12898
 succinonitrile, polycryst., rotational transitions meas. 4=1898
 sucrose, crystal growth 2=10788
 sucrose crystal growth 3=8803
 sucrose, e.s.r. of γ -irradiated single crystals 1=20230
 sucrose soln., surface tension, temp. depend. 2=21883
 sucrose, X-irrad., e.s.r. study 2=18946
 sugar-aeridine orange phosphor, transitions to metastable states 1=14643
 sugar-esculin phosphor, transitions to metastable states 1=14643
 sugar solutions, light scattering, turbidity meas. 0=6951
 sugar solutions, mixing with solvent 0=10639
 sugar-tryptaflavine phosphor, transitions to metastable states 1=14643
 sugar, X-irrad., centre prodn. and decay 2=12823
 sulphides, meas. of appearance pot. prod. by electron impact 4=8623
 sulphobenzoic acid, in nonane, phosphorescence spectra, liq. O₂ temp. 2=18877
 sulphur cpds., magnetic susceptibilities 1=1192
 supercooled, dielectric spectra, two dispersion regions 4=14178
 sym-trinitrobenzene, electronic structure and spectrum 4=15361
 sym-trinitrobenzene and related radicals, e.s.r. study 4=30474
 TNT, pressed, detonation vel., charge diam. depend. 1=4099
 TPPAP radical, proton resonance, spin densities 0=17778
 tar, elastic props., meas. under dynamic loading 1=3956
 tartaric acid, Al, electrolysis, luminescence, flash spectra 3=10984
 tartaric acid, optical rotation, effect of irradiation by 2 MeV electrons 1=11355
 tartaric acid, quenching of dye solutions 1=15891

Organic compounds—contd

- terbium ion chelate in vinylic resin matrix, laser action 4=5875
 terephthaldehyde anion, rotational isomerism by ESR spectra 1=17368
 terephthalic acid, convective diffusion, in turbulent flow 0=78
 ternary mixtures, static polarization, association consts. 2=2728
 p-terphenyl in benzene and cyclohexane, luminescence quenching by CCl_4 4=18208
 p-terphenyl, crystal growth 2=4386
 p-terphenyl crystals, luminescence decay times 2=18869
 terphenyl in cyclohexane-benzene, luminescence quenching 1=6867
 terphenyl, effect of adsorption on fluoresc. spectrum 3=8932
 p-terphenyl, electrical conductivity, space-charge-limited 2=2130
 terphenyl, fluoresc. by α -rays, polarization 4=20503
 n-terphenyl, fluorescence quantum yields 0=16098
 terphenyl, σ -, m- and p-, e.s.r. meas. 4=25730
 p-terphenyl, light yield rotation under α -rays 4=13094
 terphenyl, liq. and solid, slow neutron scatt. 2=9854
 p-terphenyl, luminescence in quenching solns. 2=7224
 terphenyl and other phosphors, dissolved in polymers, luminescence 1=14649
 terphenyl, photoelec. fluorescence props., u.v. 3=21865
 p-terphenyl + POPOP, in polystyrene, scintillation efficiency 1=16815
 terphenyl salicylate, films, u. v. fluorescence, thickness depend. 4=29756
 terphenyl, scintill. light yield under deuterons and α -rays 4=26255
 n-terphenyl, scintillation 0=4447
 terphenyl, scintillation light yield for α and β -rays 4=13093
 terphenyl soln. in toluene, energy transfer, spectral effects 1=9402
 terphenyl, solns., in dioxane, radioluminescence quenching 2=14750
 p-terphenyl solns., luminescence and spectra 3=1701
 p-terphenyl, solution in xylene, luminescence 0=14662
 p-terphenyls, as scintillators, u.v. props. 0=16710
 p-terphenyl-tetraphenylbutadiene soln. in toluene, solute-solute energy transfer 1=9401
 p-terphenyl-toluene soln., cathodoluminescence, rise-time charac. 1=2765
 terpine monohydrate crystals, growth, elastic and piezoelectric props. 0=13952
 tert-butyl bromide, decomposition rate, comparative meas. with single-pulse shock tube 4=15838
 tert-butyl chloride decomposition rate, comparative meas. with single-pulse shock tube 4=15838
 tert-butyl cpds, thermal decomposition at high temp. 4=15839
 tetrabromobenzene, molec. structure, X-ray anal. 0=1922
 1,1,2,2 tetrabromoethane, C^{13} n.m.r. 3=22594
 tetracene, bond lengths 3=1341
 tetracene, in boric acid glasses, photo-ionization by u.v. 0=21290
 tetracene, e.p.r. of positive ion 2=18477
 tetracene microcrystals, surface excitons, from visible absorption 1=6090
 tetracene, press. effect on elec. resistance 2=18701
 tetracene-pyrene mixed crystals, emission props. 4=30692
 tetracene, soln. in solid pentane, luminescence spectra 1=17917
 tetrachloroethane, far i.r. absorption 3=24031
 tetrachloroethane, optical constants from i.r. reflection spectrum 1=7698
 tetrachloroketo-naphthalene, crystal struct. 0=4617
 tetrachloromethane sol., diffusion coeff. of polystyrene 0=10654
 tetrachlorosemiquinone, polycrystalline derivs., anisotropic g-factor 4=10334
 tetracyanoethylene complexes, semiconduction and absorption spectra 2=4040
 tetracyanoquinodimethan ion radical salts, e.s.r. 1=9056
 tetracyanoquinodimethan radical ion, high elec. cond. 4=25995
 tetracyanoquinodimethan salts, high elec. conductivity, exchange interaction 1=2402

Organic compounds—contd

- tetracyanoquinodimethan salts, highly conductive solids 4=6912
 tetracyanoquinodimethan salts, mag. props. 4=7223
 tetracyanoquinodimethane ion radical salts, e.s.r. 3=11109
 tetracyanoquinodimethane, pressure effect on properties 4=30602
 tetracyclic hydrocarbons and alkyl-substituted derivatives, spectra and state assignments 3=15360
 tetradecanoic acid coating to suppress neutron total refl. 3=7867
 tetraaduterioallene, Raman and i.r., integrated intensities and polarizations 4=6609
 tetraaduteriomethane, absorp. on carbon black 3=1377
 tetraaduteriomethane, viscothermal and thermal relaxation 4=24271
 tetrafluoroethane, F-F spin-decoupling 2=18482
 tetrafluoroethylene-hexafluoropropylene copolymers, relaxations 2=23903
 tetrafluoromethane, virial coeff., intermolec. potl. 1=15052
 tetrahydrofuran hydrate, Structure II, dielectric absorption 4=22771
 tetrahydrofuran-Na reaction product e.s.r. spectrum 2=10278
 tetrahydrofuran, vac. u.v. absorption spectrum 3=15365
 tetrahydropyran, vac. u.v. absorption spectrum 3=15365
 tetraiodoethylene, magnetic anisotropy meas. 4=7212
 tetrakis-thiourea-nickel chloride, crystal spectrum and magnetism 4=13064
 tetramethyl ammonium chloride, irradiated crystal, e.s.r. 3=8716
 1, 2, 4, 5-tetramethyl benzene, nuclear quadrupole resonance in solid solution 1=20277
 tetramethyl silane, self-diffusion 1=4330
 tetramethylammonium bromide, thermodyn. props. 2=14381
 tetramethylammonium chloride, thermodyn. props. 2=14381
 tetramethylammonium, crystal struct. 4=26682
 tetramethylammonium dichromate, spectrum 3=15671
 tetramethylammonium hydrogen dichloride, thermal props. and bonds 2=14303
 tetramethylammonium mercury tribromide $[\text{N}(\text{CH}_3)_4\text{HgBr}_3]$ crystal structure and ferroelec. props. 3=13488
 tetramethylammonium tetrachlorocobaltate, crystal structure 0=3243
 tetramethylammonium tetrachlorozincate, crystal structure 0=3243
 tetramethylammonium-trichloro-mercurate, switching time 1=3807
 tetramethylammonium-trihalo-mercurates, ferroelec. props. 2=4093
 N, N'-tetramethylbenzidine, positive ion, e.s.r. 2=23000
 tetramethylbenzidine: I_2 , Br_2 , tetranitromethane electrical conductivity 1=17718
 tetramethyl-1, 3-cyclobutane-dione ketyl, e.s.r. 2=18479
 tetramethyl-1, 3-cyclobutanedione, u.v. absorption spectrum 3=17606
 1, 1, 4, 4-tetramethylcyclohexyl-cis-2, 6 diaetate relative signs of geminal and vicinal coupling const. 3=2663
 3, 6-tetramethyldiamino and 3-aminophthalimide, luminescence, gases, liquids, anti-Stokes 4=22415
 3, 3, 6, 6-tetramethyl-1, 2-dioxo-cyclohexane, intramolecular hindering potential 1=17359
 tetramethylparaphenylenediamine 2-methyl pentane, stimulated emission 3=959
 tetramethyl-paraphenylenediamine in 2-methylpentane, u.v. irradi., e.s.r. 3=5041
 tetramethyl-pentamethylene oxide of nitrogen solns., ordinary and supercooled glassy solid, e.s.r. 4=2710
 tetra-n-butyl ammonium fluoride hydrate, structure 4=7655
 tetra-n-butyl ammonium halides, electron irradiation 0=7797
 tetra-n-butyl ammonium iodide in CCl_4 , contact ion pairs, rel. to added methanol 3=13612
 tetra-n-butyl and tetra i-amyl quaternary ammonium salts, hydrates 0=3255
 tetra-n-hexylammonium iodide in carbon tetrachloride, u.v. absorption spectrum 4=184

Organic compounds—contd

n-tetranonacontane ($n\text{-C}_{94}\text{H}_{190}$), crystal growth and habits 3=11236
 tetraphenanthroline dihydroxyl diferric chloride, paramagnetism 1=17934
 1,1,4,4-tetraphenyl-1,3-butadiene, fluorescence quantum yields 0=16098
 tetraphenylbutadiene, photoelec. fluorescence props., u.v. 3=21865
 tetraphenyl-1:3-butadiene + polystyrene solutions, fluorescence, energy transfer mechanism 1=6865
 tetraphenylhydrazine, free radicals, e.s.r. study 1=9951
 tetraphenylporphyrin with Mg and Zn, D_{4h} symmetry structure and limiting polarization 3=2635
 tetravinylsilane, n.m.r. unique parameters calc. 4=3810
 tetravinylsilicon, proton mag. res. spectra 3=2657
 S-tetrazine, fluorescence 2=4186
 s-tetrazine, nature of emission spectra 3=18044
 s-tetrazine, vibr. freqs. rel. to spectrum 4=22411
 tetrolaldehyde, near-u.v. spectrum analysis 2=14290
 thalic acid in NaOH, response to 14 MeV neutrons 4=25118
 thalidomide, spectrum, u.v., in alkaline solns. 4=9759
 thiazine dye crystals, absorption spectra 1=14595-6
 thiazine dye radicals, e.s.r. study 2=23008
 thiazine-iodine complexes, semiconducting and optical props. 4=6995
 thioindigo-chlorobenzene system, molar extinction coeffs., determ. by graphical method 4=16114
 thio-indigo and derivs., free radicals, e.s.r. study 2=16552
 thio-indigo and di-derivs., luminescence 2=17473
 thiolacetic acid, molal thermodynamic props., ideal gas, state, 273-1000°K 3=14210
 thionaphthalene, near u.v. spectra 3=15368
 thionine violet, liquid crystal spectrum 4=24220
 thiophene, acoustic and mech. props. 2=15586
 thiophene in benzene, spectrochem. analysis by i.r. absorption 4=30912
 thiophene, diamag. anisotropy by n.m.r. 2=13698
 thiophene, high-resolution n.m.r. 3=8301
 thiophene, light scatt., orientational interaction and rotation of molecules 4=24162
 thiophene, proton resonance spectra analysis 2=6220
 thiophene, thermodynamic functions calc. from spectroscopic data 0=13433
 thiophene, u.s. dispersion, molecular structure 3=21354
 thiosalicylic acid, monoclinic crystals, twinning 4=29033
 thiourea, adsorption onto Ni electrode 2=4499
 thiourea, crystal structure and ferroelec. props. 2=667
 thiourea, ferroelec. props. 0=2921
 thiourea, ferroelec. props. under high press. 4=26130
 thiourea, ferroelec.-switching time rel. to applied field 2=21213
 thiourea, ferroelec. transits. 2=12566
 thiourea, low-temp. ferroelectric phase, electron diffraction crystallography 3=18330
 thiourea, molal thermodynamic props., ideal gas state, 273-1000°K 3=14210
 thiourea, N^{14} n.q.r. 2=14861
 thiourea, nature of dielectric anomalies 1=2431
 thioxanthone S, S-dioxide, e.s.r. of mononegative ion 3=2655
 36 hydrocarbons, refractivities 0=8777
 thymol, supercooled liquid, u.s. velocity discontinuity at melting point 1=12876
 tin cpds., Sn^{119} 23.8 keV Mössbauer spectra 3=15415
 tobacco mosaic virus, orientation in flow birefringence 1=15875
 tolan, frozen cryst. solns., absorpt. and emission spectra 4=10205
 tolan, i.r. dispersion and absorption 1=11382
 tolan, vapour, soln. and crystals, u.v. absorption, luminescence 1=14056
 tolane, absorption bands, rel. to temp. 2=21243
 tolane-Hg diphenyl, mutual solubility 4=10408
 tolane-Hg diphenyl, mutual solubility in solid state 4=10408
 tolane, i.r. spectrum, freqn. and intensities 3=25469
 tolane, luminescence polarization 0=656
 tolane, as neutron detector 3=4411

Organic compounds—contd

tolane, oscillator strengths from i.r. dispersion data 4=4282
 tolane, photodepolarization, polarity, in fundamental absorpt. band 3=17908
 toluene, adsorption on carbon, enhancement of nuclear polarization 0=16717
 toluene- α , α , α - d_3 , radiolysis, thermal-spike model 4=26762
 toluene anion, e.s.r. 2=2018
 toluene, carried in N_2 , as pyrolytic coating for zone-melting vessels 0=21167
 toluene and chlorobenzene, weak dipolar interaction 2=17455
 toluene, complex refractive index, below 5 mm 0=81
 toluene containing organic scintillators, excitation energy transfer from toluene 4=11202
 toluene, cross stresses in laminar flow 0=10637
 toluene, D-substituted, proton chemical shift 1=12317
 toluene- d_8 , dissoci. by electron impact, preferential H loss 4=20116
 toluene, electroluminescence 4=22938
 toluene, electrostriction 0=934
 toluene, glow discharge in vapour 0=9017
 toluene, i.r. absorpt., temp. depend. 3=8286
 toluene, interfacial phenomena with acetic acid 1=2742-4
 toluene, internal conversion, upper electronic—first excited singlet states 4=1286
 toluene, liquid, molecular motion, by proton relaxation 1=9408
 toluene, methyl and ring protons, n.m. relax. 3=4282
 toluene, neutron moderation, pulsed source 4=25113
 toluene, nuclear spin-lattice relax. meas. 3=23912
 toluene, Raman light intensities, ang. distrib. 4=16118
 toluene, Raman scattering cross-sections 4=17300
 toluene soln., with various aromatic activators, scintillation efficiency 1=4348
 toluene, thermal conductivity, -20° to +112°C 2=2709
 toluene, thermodyn. and mol. props. 2=15822
 toluene, 2.8 MeV electron beam, energy loss 1=18935
 toluene, u.s. absorption in kc/s region 2=9274
 toluene, u.s. absorption and mol. structure 2=13335
 toluene vapour, h.f. resistance 3=9515
 toluene vapour ionization, isotope effect in energy transfer from metastable noble-gas atom 4=29866
 toluenes, halogen-substituted, singlet \rightarrow triplet absorption in near u.v. 1=14053
 p-toluidine crystals, growth and evaporation 0=13956
 toluidene, fluorescence quenching mechanism 2=14745
 toluidenes, Raman and i.r. spectra 2=7219
 p-toluidine, heat of fusion 4=5450
 toluidine, para, crystal structure, atomic 4=13618
 toluidine, rotational mobility, orientational relax., temp. depend. 4=25700
 di-o-tolyl ether, mol. struct., by n.m.r., correction 3=10546
 Tony blue (4,4'-dipyridyl radical) e.s.r. spectrum 2=15619
 trans-butadiene, electronic structure, SCF calc. 1=9935
 trans-butane-2, effect of atomic T irradiation 2=4562
 trans-butene, reaction with H and D atoms 2=21586
 trans-1-chloropropylene, microwave spectra 3=2642
 trans-cinnamic aldehyde, nuclear spin-spin coupling of protons 1=2499
 trans-cinnamic acid, heats of combustion and formation 2=21585
 trans-1,2-dichloroethane, effect of hindered rotation on n.q.r. 4=26457
 trans-dichlorotetrammine Co III, spectrum, tetragonal splittings 4=22399
 trans-hexatriene, secondary Raman effect 4=3899
 trans-hexene-2, effect of atomic T irradiation 2=4562
 trans-stilbene, α -particle scintillation 3=18045
 trans-stilbene, crystals, luminescence decay times 2=18869
 trans-stilbene, hole drift mobility, meas. by photoconductivity method 4=26154
 trans-stilbene, p-monohalogen substituted, luminescence 2=722
 transformer oil, compressibility measurement 1=9365
 transformer oil, conduction current and breakdown rel. to organic additives 4=5203

Organic compounds—contd

- transformer oil, kinetic theory of viscosity 1=8094
transformer oil, potential distrib. between high-voltage electrodes, coating effects 4=21146
transition metal cyano cpds. overlap integral calculation 3=10529
transition-metal pentacyanonitrosyl complexes, optical spectra 2=6570
transition metal porphyrins and phthalocyanines, electronic structure, theory of e.s.r. and mag. susceptibility 1=865
triacetin, velocity of hypersound 1=8183
triacetin, velocity of hypersound 1=10570
trialkylboranes, B¹⁰ pure quadrupole resonance spectra rel. to α C-H bonds 4=6645
triarylborons, molec. configurations, theory 4=12511
1, 3, 5-triaryl-2-pyrazoline, fluorescence, wavelength shifting in scintillators 3=25491
s-triazine, $n \rightarrow \pi^*$ absorption spectrum 1=17322
triazine, symmetrical, potential constants 4=1301
s-triazine and trimethyl-s-triazine, phosphorescence and absorption 1=10126
s-triazine, vibr. freqs. rel. to spectrum 4=22411
1,3,5-tribromobenzene, diamag. anisotropy 0=2978
1,3,5-tribromobenzene, structure at 20°C 0=8246
trichloroacetic acid, crystal structure by PMR 1=20276
trichloroacetic acid, polycryst., n.q.r. of Cl^{35,37} 4=10350
trichloroacetic acid, proton resonance 0=8093
1,3,5-trichlorobenzene, diamag. anisotropy 0=2978
1,3,5-trichlorobenzene, intra-molecular vibrations 0=4622
1,3,5-trichlorobenzene, polarity of substituents 0=3256
1,3,5-trichlorobenzene, quadrupole resonance frequencies 2=4293
1,2,3-trichlorobenzene, quadrupole resonance study 0=18234
1,2,4-trichlorobenzene, Raman, i.r. and luminescence spectra 1=14035
1,3,5-trichlorobenzene, space group 0=18370
1,3,5-trichlorobenzene, structure at -183 and 20°C 0=8246
1,3,5-trichlorobenzene, Zeeman effect of nuclear quadrupole resonance 1=9076
trichlorobromomethane, fragmentation by Br nuclear decay 2=12981
1,1,2-trichloro-2,2-difluoroethane (CHCl₂-CF₂Cl), spin-spin splitting, temp. depend. 2=22999
3,3,3-trichloropropene, n.m.r. spectrum 2=6224
tricosanol, electron diff. intensities rel. to structure amplitudes 4=10521
tricyanomethanide ion, i.r. and Raman spectra 3=6407
tricyclodecane, crystal lattice vibr. 4=3978
triethanolamine, nuclear emulsion hypersensitization 0=12735, 12738, 12744
triethylamine, nuclear emulsion hypersensitization 0=12744
triethylamine, u.s. relaxation studies 1=1741
triethylamine-water solns., conc. fluctuations, light scatt. study 3=21365
triethylamine-water, u.s. propagation 1=12878
triethylammonium-(tetracyanoquinodimethane)₂, elec. conduction and charge transfer 4=22729
triethylborane-d₁₅, i.r. spectrum 0=1532
triethylscarphane, crystal and mol. structure 2=15039
trifluorethylene derivs., relative signs of F n.m.r. spin coupling constants 2=11392
trifluoroacetamide, e.s.r. of γ -irradiated crystal 2=23707
trifluoroacetamide, e.s.r. of irradiated crystals 4=26395
trifluoroacetonitrile, thermodynamic props. 1=11861
trifluorobromoethylene, F-F spin-decoupling 2=18482
trifluoromethanethiol (CF₃SH), i.r. spectrum and fundamental freq. assignment 0=4205
trifluoromethanethiol, i.r. spectrum and internal rotation 3=6401
trifluoromethanethiol, thermodynamic props. 0=5017
triglycine sulphate, critical-pt. polarization fluctuations 3=893
triglycine fluoborerylolate, elec. conductivity nr. phase-transition pt. 3=17924
triglycine fluoborerylolate, ferroelec. transition, nature 1=17833
triglycine selenate, ferroelec. transition, nature 1=17833
triglycine selenate, ferroelectric props., pressure effects 0=4379

Organic compounds—contd

- triglycine sulphate, charged powder study of growth features 1=12613
triglycine sulphate, coercive field frequency dependence 4=4217
triglycine sulphate, corrosion by domain boundaries 3=8563
triglycine sulphate, deuterated, pulsed polarization reversal 1=3804
triglycine sulphate, dielec. const. and loss tangents at 3.3 kMc/s 1=14551
triglycine sulphate, dielec. props. 100 c/s to 3 Gc/s 3=20386
triglycine sulphate, dielec. props. rel. to γ -irrad. 3=25406
triglycine sulphate, dielectric const., up to 23 kMc/s 3=23005
triglycine sulphate, dielectric constant charge during switching 1=11338
triglycine sulphate, deuterated, dielec. props. 3=13122
triglycine sulphate, deuterated, domain walls 2=18770
triglycine sulphate, deuterated, prep. and dielec. props. 2=16775
triglycine sulphate, dielec. consts. and loss tangents at 3.3 kMc/s 2=16768
triglycine sulphate, use as dielectric element 4=22788
triglycine sulphate, dielectric props. 0=16011
triglycine sulphate, domains, nucleation sites 0=640
triglycine sulphate, effect of γ -irrad. on ferroelec. props. 2=14622
triglycine sulphate, effect of γ -radiation on diel. props. 1=17832
triglycine sulphate, effect of u.v. on ferroelectric props. 1=12476
triglycine sulphate, elastic props. and internal friction 3=13323
triglycine sulphate, electrostriction 4=20426
triglycine sulphate, electrostrictive constants 3=15624
triglycine sulphate, etch patterns 0=4601
triglycine sulphate, external habit and ferroelec. props. 4=15767
triglycine sulphate, far i.r. dielec. props. 3=15687
triglycine sulphate, ferroelec. domain delineation, arrays prod. by thermal shocks 1=17834
triglycine sulphate, ferroelec., e.s.r. analysis 2=2208
triglycine sulphate, ferroelec. hysteresis and pyroelec. 0=1703
triglycine sulphate, ferroelec. phase transition 2=6521
triglycine sulphate, ferroelec. polarization reversal 2=10554
triglycine sulphate, ferroelec. props. 1=17835
triglycine sulphate, ferroelec. props. 3=6619
triglycine sulphate, ferroelec. props., ageing 1=8930
triglycine sulphate, ferroelec. props., ageing process and rejuvenation 0=18100
triglycine sulphate, ferroelec. props. at 0.01-50 c/s 2=668, 14624
tri-glycine sulphate, ferroelec. statistical theory 4=17523
triglycine sulphate, ferroelec. switching mechanism 0=1694
triglycine sulphate, ferroelec. transition, nature 1=17833
triglycine sulphate, ferroelectric domains, structure and motion 0=20956
triglycine sulphate, ferroelectric, high pressures, hysteresis 3=23004
triglycine sulphate, ferroelectric non-linearity, var. with r.f., temp. 4=7052
triglycine sulphate, ferroelectric properties, rel. to γ -irradiation 3=20387
triglycine sulphate, ferroelectric props., γ -induced changes 4=15561
triglycine sulphate, ferroelectric props., pressure effects 0=4379
triglycine sulphate, ferroelectric transition temp., press. depend. 3=17938
triglycine sulphate, γ -irrad., ferroelec. switching mechanism 2=8673
triglycine sulphate, h.f. ferroelec. props. 2=14608
triglycine sulphate, h.f. ferroelec. props. 4=4218
triglycine sulphate, hysteresis loop, effect of X-rays 4=26131
triglycine sulphate, hysteresis losses 2=16782
triglycine sulphate, inverse piezoelectric effect, various dependences 3=20391

Organic compounds—contd

- triglycine sulphate, light detection using pyroelec. effect 2=18768
 triglycine sulphate, matrices for information storage 2=16779
 triglycine sulphate monocrystals, elec. conductivity 1=6194
 triglycine sulphate, optical harmonic generation 4=10206
 triglycine sulphate, optical harmonics meas. 2=17605
 triglycine sulphate, optical mixing of laser beams 2=9388
 triglycine sulphate, permittivity increase during slow switching 3=2960
 triglycine sulphate, permittivity and $\tan \delta$ at 9600 Mc/s 1=1135
 triglycine sulphate, phase transitions 1=14556
 triglycine sulphate, piezoelec. and elastic props., effect of γ -radiation 3=17949
 triglycine sulphate, piezoelec. and electrostrict. consts. 4=7051
 triglycine sulphate, piezoelec. oscill. damping 2=16797
 triglycine sulphate, piezoelec. props. 2=679, 6531, 23508
 triglycine sulphate, piezoelec. props. and elastic consts. 2=14623
 triglycine sulphate plates, dielectric properties 1=11339
 triglycine sulphate, polarization relaxation above Curie temp. 3=2961
 triglycine sulphate, polarization reversal 2=16778
 triglycine sulphate, polarization reversal, antiparallel domains 4=15560
 triglycine sulphate, proton mag. resonance 2=6710
 triglycine sulphate, pulsed polarization reversal, asymmetry 1=3803
 triglycine sulphate, pyroelectric response 3=25414
 triglycine sulphate, pyroelectricity, internal domains, and interface charges 0=6160
 triglycine sulphate-selenate, ferroelec. props., composition depend., Devonshire coeff. 0=4380
 triglycine sulphate, switching, dielec. const. 2=16783
 triglycine sulphate, thermal expansion 0=7856
 triglycine sulphate, thermal expansion 3=6481
 triglycine sulphate, thermal expansion anomaly at Curie pt. 2=10335
 triglycine sulphate, twins and dislocations, etching 3=22790
 triglycine sulphate, u. s. relax. near Curie temp. 4=6728
 triglycinfluoroberylate, ferroelectric impedance during switching in pulsed elec. fld. 4=1865
 triglycylsulphate, internal friction, ampl. depend. 4=15716
 trimethoxyboroxine, B^{11} quadrupole coupling constants 1=17348
 trimethyl aluminium, chemiluminescence in upper atmosphere 4=7876
 trimethyl phosphorus, reaction with BF_3 1=6569
 trimethyl silane, microwave spectrum, structure, dipole moment and int. rotation 0=17744
 trimethylacetic acid, n.m.r. study 3=13313
 trimethylamine oxide, molecular and crystal structure 4=10561
 trimethylaminoxid hydrochloride, crystal structure 0=6365
 trimethylammonium ion in aq. soln., proton-transfer study by n.m.r. 3=25812
 trimethylbenzenes, solid, proton resonance, methyl group reorientation 1=10197
 trimethylborane- d_9 , i.r. spectrum 0=1532
 N-trimethylborazole, B^{11} quadrupole coupling constants 1=17348
 trimethylcarbinol, liquid-solid phase boundary 2=19772
 trimethylene oxide, vac. u.v. absorption spectrum 3=15365
 tri-1-(2-methylnaphthyl) boron, rotational isomerism, n.m.r. study 4=12511
 2, 2, 4-trimethylpentane, double refraction in strong shock waves 3=7205
 2, 2, 4-trimethylpentane, ion pair average energy loss 4=24252
 trimethylplatinum cpds, infrared spectra 4=30693
 tri-1-naphthylboron, spectrum, intramolecular charge-transfer bands 1=19641
 tri-n-butyl sulphonium fluoride hydrate, monoclinic, crystal structure 4=23502
 tri-n-butyl sulphonium fluoride, monoclinic, structure 4=13620

Organic compounds—contd

- s-trinitrobenzene, e.s.r., photo induced, line splitting 3=18831
 trinitrotoluene, liquid, detonation pressure 0=6399
 trinitrotoluene (trotyl), cast, shock-wave velocities and effects 0=16776
 trioxane, polymerization growth, BF_3 catalyst 4=23659
 tripalmitrin, proton mag. reson. and crystal structure 2=2308
 triphenyl derivatives of group IV elements, ring proton shifts 3=16637
 triphenyl methane dyes, photoconductivity 0=1684
 triphenyl-phenoxyl in benzene, O_2 electron spin relaxation 4=2711
 triphenyl phosphate liquid state, u.s. velocity and compressibility 1=18406
 triphenyl phosphate, u.s. velocity rel. to molecular parameters 1=18403
 1, 3, 4-triphenyl- Δ^2 -pyrazoline, fluorescence quantum yields 0=16098
 triphenylamine, e.s.r., photo induced 4=26437
 triphenylamine, hole drift mobility, meas. by photoconductivity method 4=26154
 triphenylamine, luminescence 2=6629
 1, 3, 5-triphenylbenzene, e.s.r. obs. of $\Delta m = 1$ transitions 3=1186
 1, 3, 5-triphenylbenzene, X-ray diffuse scattering 0=21206
 triphenylchlorostrannane, Mössbauer spectra peak anisotropy 4=25812
 triphenylene, in boric acid glasses, photo-ionization by u.v. 0=21290
 triphenylene, e.s.r. obs. of $\Delta m = 1$ transitions 3=1186
 triphenylene, ionization-dissociation processes caused by electron impact 4=28248
 triphenylene, luminescence, u.v. 4=22932
 triphenylene, and mono- and divalent ions, electronic spectra, correlations 0=20648
 triphenylene, π -electron calc. 4=1250
 triphenylene in polymethylmethacrylate host, e.s.r. triplet state, effect of temp. 4=23054
 triphenylmethane dye halides, dark conductivity 3=25416
 triphenylmethane, unstable luminescence centres 2=21277
 triphenylmethane dyes, photoconductivity, carrier "sticking" levels 4=26155
 triphenylmethyl, absorption and fluoresc. spectra at 4.2° K 3=4976
 triphenylmethyl, paramag. resonance absorption 0=17773
 triphenylmethyl radical, e.s.r., spin densities, corrections 3=20018
 triphenylphosphine anion, e.s.r. 2=20863
 triptycene, u.v. absorption, calc. 1=6023
 tris-acetylacetonates of Cr, Mn, Fe, and Al, i.r. spectra, Jahn-Teller effect in Mn cpd. 0=20636
 tris (2,2'-dipyridyl) Os ions, n.m.r. study of electron transfer 3=12866
 tris-p-nitrophenylmethyl radical, e.s.r. absorption 1=17342
 tris (1,10-phenanthroline) Fe ions, n.m.r. study of electron transfer 3=12866
 tristearin, proton mag. reson. and crystal struct. 2=2308
 tris(trimethylene)benzene, $C_{15}H_{18}$, crystal structure and molecular statics 4=10562
 trivinylmethyl radical, spin density, calc. 1=6055
 trivinylphosphate, n.m.r. spectrum analysis 4=1315
 tropaeolin phosphor, use in polymer adhesion study 0=3162
 tropylium ion, vibrational-electronic interactions 1=17309
 tryptaflavin in frozen solvents, phosphoresc. 4=7204
 tryptaflavine cation, absorption spectrum 1=14013
 tryptaflavine, films, photocond., surface recomb. 1=3783
 tryptaflavine, fluorescence, solvent effects 4=29637
 tryptaflavine in gelatine, phosphorescence and absorption 1=6866
 tryptaflavine, luminescence 3=9469
 tryptaflavine, luminescence, in alcohols, polarization, effect of "initial shock" 4=8215
 tryptaflavin luminescence quenching by rhodamin-6G in methanol by intermol. energy transfer 4=28287
 tryptaflavine, phosphorescence, anti-Stokes 1=6235
 tryptaflavine in Plexiglas, fluorescence polarization 1=7723

Organic compounds—contd

- tryptaflavine in poly and monomethylmethacrylate, absorpt., light, conc. var. 4=22416
 tryptaflavine, sensitized fluorescence 1=2763
 tryptaflavine, solutions in glycerine, depolarization of fluorescence 1=9397
 22 liquids, thermal cond., 20°C 0=8660
 L-tyrosine hydrochloride, crystal struct. 2=10860
 tyrosine, paramagnetic resonance and semiconductor theory 1=11115
 tyrosine thermoluminescence, rel. to surf. area and gas press. 3=18052
 u.v. spectrophotometry, sample disks compacted with KCl 1=18593
 ultramarine free radical, double quantum transition 2=4247
 undecane, trapped Au and Ag e.s.r., liq. N₂ temp. 4=13317
 unsaturated hydrocarbons, d-hybridization in π molecular orbitals 3=10533
 unsaturated, proton resonance, effects of electron delocalization 1=2351
 uracil, crystal study of three derivatives 0=6368
 uranin dye solns., luminescence polariz. and decay 3=23893
 uranin, ionic forms, luminescence 2=9284, 15606
 uranin, soln., fluoresc. depolariz. by mol. rotation 3=139
 uranin solns., fluorescence quenching 2=9283
 uranyl acetate, absorption bands analysis 3=8282
 uranyl phthalocyanine soln., luminescence 4=5199
 urea ammonium bromide, crystal structure 3=13487
 urea cpds., radiation damage, e.s.r. study 2=2106
 urea, electron diffrn. study 3=3310
 urea, n.m.r. of H¹, analysis by lattice harmonics 3=5047
 urea, N¹⁴ n.q.r. 2=14861
 urea, N¹⁴ nuclear quadrupole reson. spectrum, temp. depend. 0=6271
 1:2 urea-phenol, heat of fusion 4=5450
 urea single crystals, n.q.r. 2=2309
 urea, temp. vibrations 2=10249
 urotropine, electro-optical effect 4=15604
 urotropine molecules, rotation in solid state 4=1894
 valence refractivities for 150 cpds. 2=11372
 d, l-valine, γ -irrad., e.p.r., free radical structure and orientation, 77° and 293°K 4=17685
 vanadyl ion complexes, electronic structure, e. s. r. studies 4=30468
 vapours, complex mols., fluorescence 2=15654
 vapours, electron ionization coeff. 0=2316
 vaseline, electroluminescence 4=22938
 vaseline, electromagnetophoresis 3=16901
 vinyl acetate liquid state, u.s. velocity and compressibility 1=18406
 vinyl acetate, polymerization, effect of ionising radiations 3=6925
 vinyl acetate, u.s. velocity rel. to molecular parameters 1=18403
 vinyl acetylene, rotational Raman spectra 4=9762
 vinyl bromides, rotation spectra, quadrupole coupling and structure 4=6638
 vinyl chloride-acetate films, electric breakdown strengths 1=10082
 vinyl chloride, kinetics of HI addition 3=11338
 vinyl chlorides, i.r. spectral bands at 1.6, 1.1, 0.8 μ 2=14280
 vinyl cpds, polymerization, molecular motion 3=23545
 vinyl, far-u.v. spectrum 2=14284
 vinyl formate, microwave spectrum 4=22417
 vinyl formate, proton-proton couplings 2=14242
 vinyl free radical, e.s.r. meas. 4=12532
 vinyl group, n.m.r. spectra, analysis 2=3186
 vinyl radical, β -proton hyperfine splittings 4=25732
 vinyl silanes, substituted, p-p coupling, solvent var. 4=20109
 vinyl stearate, crystalline transitions and mechanical dispersion 0=6299
 vinyl stearate, dielec. const. and crystal structure 0=13647
 vinylamine, improved LCAO method 3=4774
 9-vinylanthracene, scintillation props. 2=1158
 vinylidene fluoride, microwave spectrum and structure 3=17595
 vinylmethylsilanes, proton magnetic resonance 2=3782

Organic compounds—contd

- viologen free radicals, e.s.r. spectra 3=20028
 vitamin-A acid, triclinic, crystal structure 3=8870
 vitrinite, absorption of u.v. and visible light 0=20992
 VYNS, energy loss of 4-30 keV H¹ and He⁴ 3=4394
 VYNS resin films, for 4π β -counting 2=18030
 water-acetone mixtures, proton mag. res. study 1=12902
 water-dioxane mixtures, proton mag. res. study 1=12902
 in water, effect of chain length and structure on surface ageing of interface 0=2159
 Werner complexes, rotary dispersion 1=2756
 wool fibres, surface replication by rolling 0=8263
 Wurster salts, anomalous bathochromic shift 4=6639
 Wurster's blue perchlorate, exchange-ordering and forbidden spin resonance transitions 1=11483
 Wurster's blue perchlorate, free radicals, magnetic transitions 1=17364
 Wurster's blue perchlorate, n.m.r. Overhauser effect 1=17358
 Wurster's blue perchlorate, solid free radical, e.s.r., and ferromagnetism 4=6657
 xylene, adhesion to alkali halide crystals 2=9250
 xylene anions, m- and p-, e.s.r. 2=2018
 xylene, amplitude factor determ., X-ray method 4=24167
 xylene-based liquid scintillators, intermediate transfer of excitation 3=16629
 p-xylene complex with carbon tetrabromide, crystal structure 2=17027
 xylene crystals, o-, m- and p-, space groups 1=15113
 p-xylene, D-substituted, proton chemical shift 1=12317
 xylene for diffractational light modulator 0=12494
 p-xylene- α , α' -diol, heats of combustion and formation 2=21585
 p-xylene, i.r. intensity calculation 3=15369
 p-xylene, internal conversion, upper electronic-first excited singlet states 4=1286
 p-xylene, irradiation effects 2=19570
 xylene, m- and p- liquid structure 2=7193
 p-xylene, multiple proton mag. resonance relaxation 1=15910
 xylene, ortho-, para-, meta-, neutron scatt. meas. 4=28251
 p-xylene, Raman spectra, temp. depend. 2=703
 xylene solns., dynamic polarization 2=13353
 m-xylene, u.s. wave propag., nonlinearity parameter 2=9275
 xylene, ultrasonic absorption 0=3525
 xylenes, luminescence in crystalline state 0=10067
 m-xylo crystals, electron spectra 2=18822
 ytterbium ethyl sulphate, spectrum, absorpt. 4=10173
 AgClO₄·3C₆H₆O₂, p.m.r., -66 to +25° C, dioxane rot. 4=1900
 AlH₃ and AlD₃, trimethylamine and tetrahydrofuran complexes, i. r. spectra rel. to coordination bonds 4=3869
 (ϕ_3 AsCH₃)⁺(TCNQ)₂⁻ solid free radical, exciton mag. reson., zero-field 4=20584
 (ϕ_3 AsCH₃)⁺(TCNQ)₂⁻ spin-lattice relax. rel. to temp. 4=17684
 BF₃·diethyl ether, Raman and i.r. spectra 3=15361
 BF₃ + dimethyl and diethyl ether addition compounds, spectra, i.r., valence vibrs., gas, solid 4=25695
 BF₃, tetrahydrofuran, Raman and i.r. spectra 3=15361
 B₁₀H₁₃C₂H₅, ionization potential 0=14963
 Ba stearate, molecular films, thickness meas. 2=17069
 Be hydroxyacetate, optical constants from reflectivity meas. 1=17862
 Br₂, benzene, charge transfer lack, p.q.r. investigation 4=25802
 C chemical shifts from electron molec. orbital theory of diamagnetism 4=12518
 C disulphide, superheat, measurement 1=15850
 C tetrachloride, superheat, measurement 1=15850
 C₂ hydrocarbons, ionization processes 2=19895
 C₃ hydrocarbons, γ -radiolysis, ion-molecule reactions 0=16386
 C₆ hydrocarbons, C¹¹ recoil reactions 3=11359
 C₂B₂H₂, structure 4=28240
 CBr₄, p-xylene, charge transfer lack, p.q.r. investigation 4=25802
 C-C bond lengths and radii of C hybrid orbitals 0=1510
 C-C and C-H bonds, diamag. anisotropy 3=22585
 (C(CH₃)₂CH)₂, internal rotation isomers 3=25082
 CCl₄, dielectric losses 1=18426

Organic compounds—contd

- CCl₄, elec. breakdown, effect of dielec. layer on electrodes 4=29641
 CCl₄, force const., isotopic structure of $\nu_1 + \nu_4$ band 1=13987
 CCl₄, force consts. from vibr. data 3=6376
 CCl₄, i.r. band intensities, temp. depend. 1=11791
 CCl₄, i.r. bands, intensity and structure, Fermi reson., aggregate state 1=14031
 CCl₄, ionization by electron impact 1=8309
 CCl₄, ionization by H⁺ and O⁻ 1=16269
 CCl₄, liquid, i.r. absorption spectrum, 740-810 cm⁻¹ 3=23884
 CCl₄, liquid, mol. theory 3=21317
 CCl₄, liquid, optical constants from i.r. reflection 3=16624
 CCl₄, optical constants from i.r. reflection spectrum 1=7698
 CCl₄, Raman line intensities, calc. 1=2759
 CCl₄, p-xylene, charge transfer lack, p.q.r. investigation 4=25802
 CCl₄-C₆H₆, CCl₄-C₆H₁₂ mixtures, velo., acoustic waves, var. 3=16622
 CCl₃CH(OH)₂, neutron diff. crystal structure meas. 4=29147
 CCl₃C(OH)₂C₂H₅, Cl³⁵ nucl. quadrupole resonance 3=15964
 CClF₃, centrifugal stretching 2=8089
 CClF₃, microwave absorpt. in compressed He mixtures 4=24273
 CCl₃F, microwave spectrum, structure 2=14271
 CClF₃, nonresonant absorption spectra 0=10700
 CClF₃, u.s. cavitation, neutron induced 3=14122
 CCl₂F₂, ionization and attachment coeffs. 4=5550
 CCl₂F₂, ionization, by Li positive ions 1=4565
 CCl₃F, positive and negative ion formation 1=10668
 CDCl₃ in non-polar—proton-acceptor solvents, i.r. spectra, rel. to H-bond formation 4=28208
 CD₃, abstraction of primary, secondary and tertiary H atoms 3=3384
 CD₄, i.r. absorption spectrum at 4500 cm⁻¹ 2=16544
 CD₄, liquid and solid, thermodynamic props. 3=22658
 CD₄ reaction, unimolecular, statistical complexion calc. 4=13707
 CD₄, solid, phase transitions and compressibilities 0=12055
 C₂D₂, ionization, photo, mass spectrometer study 4=16440
 C₂D₆, vibr. spectrum, second order lines 4=22393
 C₁₀D₈, fluorescent props. 2=12630
 (CD₃)₂CCl, microwave spectra 2=8093
 CD₄ and CH₄, second virial coeff. below 0°C, meas. of small differences 0=14682
 CD₃H, spectrum, vibrational—rotational bands 0=7761
 CF⁺, spectrum 1=17321
 CF₄, force consts. from vibr. data 3=6376
 CF₄, i.r. spectrum, 1850-3100cm⁻¹ 3=6406
 CF₄, liquid, n.m.r. and diffusion 3=21412
 C₆F₁₂, crystal struct., atomic 4=29151
 CF₄-Ar, liquid, n.m.r. and diffusion 3=21412
 CF₃Br-CCl₂Br, i.r. and Raman spectra 1=14026
 CF₃=CCl₂, n.s.r., C¹³ isotope effect 1=12316
 CF₃CCl₃, n.s.r., C¹³ isotope effect 1=12316
 C₇F₁₆-C₈H₁₈ solns., X-ray exam. near critical region 4=27155
 (CFCl)₂, n.m.r., C¹³ satellites and F-F coupling consts. 4=1314
 CFClBr-CFClBr, potential energy det. by n.m.r. 2=18483
 CFCl=CCl₂, n.s.r., C¹³ isotope effect 1=12316
 CF₃CO₂H, n.s.r., C¹³ isotope effect 1=12316
 C¹³F₃COOH and CF₃C¹³OOH, INDOR spectra, spin decoupling 2=23004
 CF₃COOH-HCOOH double mol., hydrogen bonding 2=3739
 CF₃COOH-HCOOH, CF₃COOH-CH₃COOH, and CF₃COOH-CH₂FCOOH, microwave rotation spectra 4=28241
 CF₃SF₆, i.r. spectra 1=17318
 CH bond, anisotropic proton hyperfine interaction 4=30424
 CH, far-u.v. spectrum 2=14284
 CH group, Raman spectra, intensity, var. with excitation freq., 5461-3021A 3=25117
 CH, in halogenated hydrocarbons, molec. interacts. by n.m.r. 2=14339
 C-H, and methyl group, magnetic screening constants 4=3849

Organic compounds—contd

- CH radical, electronic structure 1=7477
 CH radical, ²π state, dissociation energy 4=12527
 CH radical in polycrystalline state, e.s.r. 1=11116
 CH⁺, transition probabilities 0=11518
 CH₂, far-u.v. spectrum 2=14284
 CH₂ radical, ionization potential 3=360
 CH₂, spectra, i.r., and vibr. assignments and excitation energies 3=15363
 CH₂, spectrum and ioniz. potential 3=7328
 CH₂, spectrum and ioniz. potential 3=7328
 CH₄, with A and N₂, condensed state, density 1=12873
 CH₄, adsorption on graphite 2=4497
 CH₄, absorption spectra, cross-sections, 600-170A 4=15272
 CH₄, absorption spectra, 1850 to 4000 A 4=11249
 CH₄, BH₄⁻, NH₄⁺, isoelectronic systems, electronic props. 3=22554
 CH₄β-quinol clathrate, CH₄ motion, 15°-100°K, free heat capacity 3=8284
 CH₄, CH₂D₂ and CD₄, heat of vaporization 4=18494
 C₂H₂, C₂HD and C₂D₂, crystalline, i.r. absorpt. spectra 4=17585
 CH₄, correlation energy 4=12507
 CH₄, decomposition, in d.c. glow, at low temp. 1=2952
 CH₄, diamag. susceptibility 1=8870
 CH₄ electron avalanche components, temporal growth meas. 3=4086
 CH₄, fundamental ν₃, fine structure freq. 1=6002
 CH₄ gas, electron drift velocities in inert gas-CO₂ mixtures 4=24274
 CH₄ gas, Joule-Thompson zero press. coeff., exptl. and theoret. 4=27208
 CH₄ gas, 7.6 and 3.3 μ band absorpt., correl. with CO₂ 4=27221
 CH₄, intermolecular potential functions, 2nd virial coeff. 1=7503
 CH₄, ionization, by Li positive ions 1=4565
 CH₄, liquid, n.m.r. and diffusion 3=21412
 CH₄, liquid and solid, thermodynamic props. 3=22658
 CH₄, melting temp. at 300 atm 1=919
 CH₄, in mixtures with H₂, O₂, CO₂ and air, viscosity 1=4364
 CH₄, n.m.r., proton chemical shifts 1=8139
 CH₄, solid, density, 77°-174°K 4=26497
 CH₄, synthesis for radiocarbon dating 1=7914
 CH₄, molecular Jahn-Teller distortions 2=22983
 C₂H₂, i.r. spectrum 1=17316
 C₂H₂, ionization, photo, mass spectrometer study 4=16440
 C₂H₂, ionization, photochemical 4=23671
 C₂H₄ molecule metastable states by electron bombardment 3=4742
 C₂H₄ molecule metastable states by electron bombardment 3=4742
 C₂H₄, rate of reaction with N 1=1471
 C₂H₅ ion, in mass spectra, paraffins from C₁ to C₈, field ionized 3=14524
 C₃H₃⁺ ion formation 4=13714
 C₃H₆, H ion prod. in, by proton beams 2=1386
 C₆H₆⁺, Jahn-Teller effect 2=6194
 C₆H₆ mols., vibr. freqs. 4=22392
 C₆H₆, neutron scattering, 0.2-2.7 × 10⁻³ eV, -100° to +200°C 1=13429
 C₆H₆, Raman line intensities, calc. 1=2759
 C₆H₆, vibr. spectrum, second order lines 4=22393
 (C₆H₆)_n, transmission of electrons, energy loss 0=11146
 C₁₀H₁₂, electronic energy levels, absorption line calc. 0=11533
 n-C₉H₂₀, radiothermoluminescence 0=21018
 C₁₂H₁₁⁺ ion-molecule complex formation and activation 2=8913
 C¹³-H coupling, from n.m.r., non-additivity of electroneg. substituents 4=20108
 C₁₂H₁₄, crystal structure 0=16332
 n-C₁₆H₃₄, radiothermoluminescence 0=21018
 C₁₆H₃₈, triclinic form, crystal structure 2=10900
 C₂₉H₆₀, structure at low temperatures 0=18337
 CH₄-A, CH₄-CO systems, thermodynamic props., ~ 90°K 3=14140
 CH₄-Ar, liquid, n.m.r. and diffusion 3=21412
 CH₄-Ar and CH₄-CO solutions, heat of mixing and volume change 3=1682

Organic compounds—contd

- $C_6H_5Br_2$, energy levels and wave functions, calc. using metallic model 1=2342
 $CHBr_3$ (liquid), proton spin-lattice relaxation, temp. depend. 1=9409
 C_6H_5Br , n.m.r. spectra, analysis 1=3569
 CH_3Br^{82} , β^- -decay, fragment ion abundances 4=2168
 $(CH_3)_3CCl$, microwave spectra 2=8093
 $(CH_3)_3C^{35}Cl$, microwave spectrum and quadrupole coupling constant 3=4769
 $C_6H_5-CCl_4$, $C_6H_5-C_6H_{12}$, C_6H_5 -neopentane, $C_6H_{12}-CCl_4$, C_6H_{12} -neopentane mixtures, velo., acoustic waves, var. 3=16622
 CH_2 and CH_3 , Rydberg levels 4=3883
 $C_7H_{16}-i-C_6H_{14}$, solution, crit. region, X-ray scatt. obs. 2=9269
 C_2H_2 , CH_3 stream, electronic excitation 2=8138
 $CH_3-(CH_3)_3=CH_2$, radical, C atom spin densities 3=15393
 $m-C_6H_4(CH_3)_m(CH_2)_n$ [$m+n=2$], electron spin-spin interact. 4=1245
 $(CH_2)_2$, $(C_6H_4)_2$, $(CH_2)_2$, intra-molecular vibrations 0=4622
 $C_6H_5CH(CH_3)NH_2$, $C_6H_5O_8$, unit cell and space group 0=14037
 CH_3CHF , n.m.r. and double resonance in gas phase 3=6420
 CH_3CH_2HgX , nuclear spin coupling H^1-Hg^{199} 3=25145
 $(CH_3CH_2)_2TiX$ $Ti^{203}-H^1$ nuclear spin-spin coupling 4=12521
 $CHCl_3$, absorpt. and dispersion, i.r. 4=22397
 $CHCl_3$, anomalous dispersion 1=2757
 $CHCl_3$, liquid, i.r. absorption spectrum, 740-810 cm^{-1} 3=23884
 $CHCl_3$ (liquid), proton spin-lattice relaxation, temp. depend. 1=9409
 $CHCl_3$, refractivity, second virial coeff. 3=3835
 CH_2Cl_2 , H-H distance calc., appl. of inertial defects 4=22338
 CH_2Cl_2 (liquid), proton spin-lattice relaxation, temp. depend. 1=9409
 CH_2Cl_2 , in ultrasonic field 0=1964
 CH_2Cl (liquid), proton spin-lattice relaxation temp. depend. 1=9409
 CH_3Cl , nonresonant absorpt. and collision diameters in foreign gas broadening 4=25785
 $C_6H_5Cl_3$, energy levels and wave functions, calc. using metallic model 1=2342
 $C_{12}H_5Cl_4$, $C_{12}H_5Cl_5$, $C_{12}H_4Cl_6$, viscosity, temp. var. 4=14148
 CH_2Cl_2 , $CHDCl_2$ and CD_2Cl_2 , Raman and i.r. spectral data, thermodynamic props. 4=22396
 $CH_3Cl_{3-n}CN$ ($n=0-3$), electro-optical parameters 4=6634
 $CHClF_2$, microwave absorpt. in compressed He mixtures 4=24273
 $CHCl_2F$, dielectric dispersion 0=14696
 $CH_2Cl_2-N_2$ reaction 2=4537
 CH_3CN , gas, virial coeff. and light scattering 1=11788
 CH_3CN , n.m.r., proton chemical shifts 1=8139
 $C_{11}H_{23}.CO.C_{11}H_{23}$, molecular torsional oscillations 1=19626
 $(CH_2)_nCR$ cpds., quasi-spherical molec. rots. 2=8871
 CH_3CXO , ($X=H, F, Cl, Br$), H-H distance calc., appl. of inertial defects 4=22338
 CH_3D , Coriolis interaction, effect on heat capacity 4=12426
 CH_3D , spectrum, vibrational-rotational bands 0=7761
 CH_3DOH , CD_3COH , analysis of microwave rotational spectrum 3=8288
 $CHDO$, n.m.r. [J_{HD}] value 4=9773
 CHF_3 , dielectric virial coeff. calc. 4=27211
 CHF_3 , gaseous, proton magnetic resonance, medium effects 3=9517
 CHF_3 , microwave absorpt. in compressed He mixtures 4=24273
 CHF_3 , nonresonant absorpt. and collision diameters in foreign gas broadening 4=25785
 CH_3F , n.m.r. and double resonance in gas phase 3=6420
 CH_3F , gas, virial coeff. and light scattering 1=11788
 CHF_3 , liquid, nuclear mag. spin-lattice relaxation, mechanism 1=8138
 CHF_3 , nuclear relaxation mechanism 1=17349
 CH_3F , refractivity, second virial coeff. 3=3835
 CH_3F , vibration-rotation spectra 4=1295
 CH_3F^{18} , β^+ -decay, fragment ion abundances 4=2168
 $CHFCl_2$, liquid, nuclear mag. spin-lattice relaxation, mechanism 1=8138
 $CHFCl_2$, nuclear spin relaxation in liquids 3=7220

Organic compounds—contd

- CHF_2Cl , liquid, nuclear mag. spin-lattice relaxation, mechanism 1=8138
 CHF_2Cl , microwave spectrum, structure 2=3738
 CH_2FCl , liquid, nuclear mag. spin-lattice relaxation, mechanism 1=8138
 $[C_3H_5FeCOAs(CH_3)_2]_2$, Mossbauer effect, cis- and trans-equal shifts 4=15360
 $[C_3H_5FeCOP(C_6H_5)_2]_2$, Mossbauer effect, cis- and trans-equal shifts 4=15360
 $(CH_3)_nGeCl_{4-n}$, stretching vibr. i. r. absorption 4=30463
 CH_3GeF_3 , v.h.f. absorption 1=2323
 $\alpha-C_{10}H_7HgI$ 4=23507
 C_2H_4-He gases at high press., interface tension 1=4317
 CH_3HgX , nuclear spin coupling H^1-Hg^{199} 3=25145
 CH_3I , reactive scattering of K beam in, KI formation 1=12336
 CH_3I^{131} , charged fragments due to nuclear decay 2=15159
 C_2H_5I , reactive scattering of K beam in, KI formation 1=12336
 CH_2N_2 , photolysis in solid CO_2 2=15157
 $C_6H_5N_2^+$, ion-molecule complex formation and activation 2=8913
 $C_{11}H_9N_2$ (Norharmon), 9H-pyrido [3, 4-b] indole, crystal structure 1=20570
 $CH_3NH_3Al(SO_4)_2.12H_2O$, specific heat anomalies, rel. to ferroelec. phase transition points 4=22497
 $CH_3NH_3^+ + OH^- + NH_2CH_3$ reactions in aq. acid, proton transfer study by n.m.r. 0=14118
 $C_6H_4(NO_2)_2$, energy levels and wave functions, calc. using metallic model 1=2342
 CH_3NO_2-Ar , shockwaves, emission and dissociation of NO_2 4=3919
 $C_6H_5NO_2-C_6H_{14}$, frequency dispersion of dielec. const. 2=15611
 $(CH_3)_2NP$ group, n.m.r. 3=4782
 $(C_6H_5)_2NP$ group, n.m.r. 3=4782
 CH_2O , n.m.r. [J_{RH}] value 4=9773
 CH_2O , neutron scattering, $0.2-2.7 \times 10^{-3}$ eV, -100° to $+200^\circ C$ 1=13429
 CH_2O , $1_{01}-0_{00}$ transition, in beam maser 4=3206
 CH_3O radical spectrum, u.v. absorpt., from photolysis of CH_3NO_2 4=22435
 C_2H_2 and O_2 explosions, shock waves, microwave obs. 4=27522
 $(C_6H_5)_3O$, n.m.r. spectra, analysis 1=3569
 $(C_6H_5O)_n$, transmission of electrons, energy loss 0=11146
 $C_{12}H_{22}O_{11}$, neutron diff. crystal structure meas. 4=29147
 $C_{12}H_{22}O_{11}$, OH bond orientation 3=4968
 CH_3O and $CHDO$, h.f.s. of microwave spectra 4=9733
 $(CH_3O-C_6H_5)_2NO$, h.f.s. and coupling consts., from e.s.r. 3=14183
 $C_{13}H_{10}O$, $C_9H_{10}O_2$, dielec. relaxation, effect of temp. 0=5022
 CH_3OH , ionization potential, higher, using electron impact Foxgun 3=14520
 $C_2H_5OH-\alpha$ -bromonaphthalene, dielec. props., 900-2000 Mc/s 1=1752
 C_2H_5OH , e.s.r. of trapped Ag , $77^\circ K$ 3=25575
 C_2H_5OH , ionization potential, higher, using electron impact Foxgun 3=14520-
 C_2H_5OH-o -cresol, dielec. props., 900-2000 Mc/s 1=1752
 $C_{14}H_{26}OH$, i.r. bands, temp. depend. 1=12289
 $C_{16}H_{33}OH$, i.r. bands, temp. depend. 1=12289
 C_6H_5OH , i.r. bands, temp. depend. 1=12289
 CH_3OH and $CHOD$, intermolecular potentials 1=8837
 $C_6H_5O.H_2O$, OH bond orientation 3=4968
 CH_3OCH_3D , analysis of microwave rotational spectrum 3=8288
 $(CH_3)_2S$, microwave spectrum 2=5494
 CH_3SH , hindered rotation potential barrier, neutron scatt. study 0=5912
 $(CH_3)_4Si^{29}$, INDOR spectra, spin decoupling 2=23004
 $(CH_3)_2TiX$, $Ti^{203}-H^1$ nuclear spin-spin coupling 4=12521
 $(CH_3)_2X$ type mols., torsion vibr. theory 3=2598
 CH_3X , Q-branch separations, rel. to quantum nos. 2=1994
 $C_3N_3F_3$, i.r. and Raman spectra 4=22376
 $C(NH_2)_3Al(SO_4)_2.6H_2O$, n.q.r. and e.s.r. 1=12573
 $C(NH_2)_3Cr(SO_4)_2.6H_2O$, Zeeman effect, 2 fine red lines 4=1759
 CNH_2N and CND_2N , vibrational spectra 4=3872

Organic compounds—contd

- Co β -quinol clathrate, CO motion, 15°-100°K, from heat capacity 3=8284
 C₆O₈H₈, OH bond orientation 3=4968
 C₆O₈H₈·2H₂O, OH bond orientation 3=4968
 Ca benzoate in NaOH response to 14 MeV neutrons 4=25118
 Ca₂Sr(C₂H₃CO₂)₈, optical birefringence 3=20445
 Cd(CH₃)₂, Raman spectra, rotational anal. 1=844
 Ce ethylsulphate, n.m.r. below 1°K 0=10245
 Ce tetrakis-dibenzoylmethane, crystal structure 0=3248
 Cl₂ in 6-chloro-2-nitrotoluene, n.q.r. Zeeman spectrum 4=17704
 Co ammines, mag. susceptibility, interaction and crystalline field 0=21027
 Co(ethylenediamine)₃³⁺, optical rotatory dispersion 3=730
 Co, molecules, electric field gradient at O nucleus, dipole moment, calc. 3=19977
 Co phthalocyanine crystals, spectra, absorpt. polarization 3=20495-6
 Co III complexes, rot. dispersion, circular dichroism 4=22398
 Co, vibration, fourth positive system, Franck-Condon factors, calc. 3=17571
 Co(CH₃COO)₂·4H₂O, paramagnetism, 0.35-4.2°K 4=13114
 Co₂(CO)₈, metal-metal bonding, and structure 1=11573
 Co₂(CO)₈·C₂H₂, metal-metal bonding, and structure 1=11573
 Co-Cl complex formation in methanol, n. m. r., optical spectra, and kinetics of methanol exchange of solvation shell, -80° to +80°C 4=27201
 [Co(MeOH)₅Cl]⁺ in methanol, n. m. r. and optical spectroscopy, and kinetics of methanol exchange of solvation shell, -60° to -80°C 4=27200
 Cr acetylacetonate, crystal spectrum 2=16836
 Cr-acetylacetonate crystals and derivatives, inter-combination spectra, 4° and 77°K 4=10170
 Cr acetylacetonate, magnetization and molec. field 0=10091
 Cr trisethylxanthate, mol. electronic struct., ligand field theory 4=22412
 [Cr₃(CH₃COO)₆(OH)₂]Cl·8H₂O, paramagnetism, 0.35-4.2°K 4=13114
 (CrMn)B, Curie points and magnetic moments 3=8637
 CS₂, optical constants from i.r. reflection spectrum 1=7698
 Cs polycyclic aromatic cpds., photoelectric emission 3=16975
 (Cs⁺)₂(TCNQ)₂⁻, props. and structure 2=14827
 (Cs⁺)₂(TCNQ)₂⁻, spin-lattice relax. rel. to temp. 4=17684
 Cu acetylacetonate, polarized absorption spectrum, 11000 to 22000 cm⁻¹, 30° to 300°K 3=3027
 Cu dihydroxy-para-quinone, mag. susceptibility at low temps. 3=1060
 Cu dipyrindine dichloride and dibromide, lattice consts., effect of size of halogen atom 0=3257
 Cu formate 4H₂O, mag. susceptibility at low temps. 3=1060
 Cu malonate, e.s.r., splitting factor 2=21361
 Cu oxinate, crystal growth and dimorphic transformations 3=18257
 Cu phthalocyanine, crystal growth and dimorphic transformation 3=18257
 Cu phthalocyanine crystals, spectra, absorpt., polarization 3=20495-6
 Cu phthalocyanine, e.s.r. 4=26392
 Cu phthalocyanine, elec. props. and charge carriers 4=6994
 α-Cu phthalocyanine, field effects and surface photovoltage 4=28422
 Cu phthalocyanine, Hall effect and carrier mobility 3=2911
 Cu phthalocyanine, surface ionization energy 2=17793
 Cu quinone complex salts, mag. susceptibilities 3=11103
 Cu salicylate tetrahydrate, crystals structure 0=8247
 Cu salt-quinoline complexes, i.r. absorption 4=22414
 Cu II acetylacetonate, thermodynamic and mag. props. 1-20°K 0=10093
 Cu(II) monoethylenediamine chloride, e.s.r. 4=7323
 Cu triethylenediamine, crystal structure 2=21526
 Dy ethyl sulphate, demagnetization expts. 3=1056
 Dy ethyl sulphate, spin-lattice relaxation 3=1194
 Dy ethylsulphate, dipolar ferromagnetism 0=8040
 Dy ethylsulphate, susceptibility and sp. ht. below 1°K 0=10094
 Dy³⁺ ethyl sulphate, cryst. field, parameters, calc. 2=552

Organic compounds—contd

- Eu benzoylacetate chelate, eightfold dodecahedral arrangement of O round Eu ion 4=29150
 Eu benzoylacetate chelates, ligand field spectra 4=28753
 Eu benzoylacetate, laser, in alcohol soln. in capillary 4=5858
 Eu benzoylacetate, laser characteristics 4=27698
 Eu benzoylacetate, optical maser action 3=17084
 Eu benzoylacetate, spectroscopic props., fluorescence kinetics and optical pumping 4=20082-3
 Eu chelate and benzophenone, soln., Eu luminescence, by inter and intra mol. energy transfer 4=2694
 Eu chelates, fluorescence rise and decay times 4=26256
 Eu chelates, fluorescent lifetimes 3=20513
 Eu chelates, luminescence, non-exponential decay mechanism 4=20500
 Eu dibenzoylmethide chelate, eightfold dodecahedral arrangement of O round Eu ion 4=29150
 Eu dibenzoyl-methide, stimulated light emission 3=23886
 Eu dibenzoylmethides, fluorescence lifetime 4=1790
 Eu β -diketone chelate in PMMA, absorption and fluoresc. spectra 4=22906
 Eu hexafluoroacetylacetonate, luminescence 4=20085
 Eu salicylaldehyde, as laser material 3=9980
 Eu tris-dibenzoylmethide, fluorescence spectra, lifetimes 3=8628
 Eu³⁺ in organic matrix solid solution, optical maser action 3=25443
 EuR₃ (R is organic radical), for possible maser, optical, by internal energy transfer 3=17072
 F₂DC-CDHF, absorption spectra, 7000-25000 Mc/s 4=1294
 F₂HC-CH₂F, molecule, spectra, 7-30 kMc/s 4=3893
 Fe acetylacetonate, magnetization and molec. field 0=10091
 Fe-nitrosyl complexes, Mössbauer effect interpretation 3=25125
 Fe(α 'dipyridyl)₃(ClO₄)₃·3H₂O, magnetic suscept. 2=4200
 Fe(o-phenanthroline)₃(ClO₄)₃·3H₂O, magnetic suscept. 2=4200
 Gd hexa-antipyrene iodide, e.s.r. of Gd³⁺ 2=4256
 Ge⁷³(C¹³H)₄, nuclear coupling, Ge⁷³-p, C¹³H, 4=22425
 HCN, π and σ Stark components 0=13441
 HC¹⁵N, vibration-rotation bands 1=829
 HCO₂ radical, electronic structure and spectrum 4=6622
 H₂CO K-type doubling spectra, microwave 1=12285
 H₂CO¹⁸ K-type doubling spectra, microwave 1=12285
 H₂C¹⁸O K-type doubling spectra, microwave 1=12285
 HDCO K-type doubling spectra, microwave 1=12285
 Hg methylmercaptide, crystal structure 4=20768
 Hg(CH₃)₂, Raman spectra, rotational anal. 1=844
 2HgCl₂·(C₂H₅)₂S, crystal structure, atomic 4=13617
 Hg/Na-decane sulphate/H₂ system, contact angles and surface tension 2=4995
 Ho ethyl sulphate, i.r. absorption spectrum and Zeeman effect 2=12605
 InC₃H₅, molecular structure and bonding 4=25707
 K acetate, u.s. vel. 2=15589
 K acid phthalate, cleavage plane grating spacing 4=4583
 K amine disulphate, e.s.r. of N(SO₃)₂⁻ radicals 2=16566
 K hydrogen succinate, temp. depend. of diamag, anisotropy 4=7213
 K methane disulphonate, e.s.r. of CH(SO₃)₂⁻ radicals 2=16566
 K squarate monohydrate, crystal structure analysis 4=23509
 K₂ tartrate (DKT), piezoelec. oscillations, effect of d.c. field 1=17855
 K vanadyl oxalate, e.s.r. study 3=1189
 KF·2Al(C₂H₅)₃, crystal structure 3=11272
 KHC₄H₄O₆, unit cell and space group 0=14037
 La ethyl sulphate, Nd gnd. state pop. changes, direct optical meth. 2=21238
 La ethyl sulphate, Pr-doped, absorption and fluorescence spectra, Pr bond covalence 3=23072
 La ethyl sulphate, single crystal growth, dielec. props. 2=19057
 La fluorenone, e.s.r., dimers 2=23012
 La hexa-antipyrene iodide e.s.r. of Gd³⁺ 2=4256
 Li-alkylated amines, e.s.r. absorpt. spectra 4=18216
 Li oxalate electron density in C-C bonds 4=4595
 Mg phthalate, luminescence rel. to temp. 2=8583
 Mg phthalocyanine, surface ionization energy 2=17793

Organic compounds—contd

- Mg phthalocyanine: $\text{VO}_2(\text{NO}_3)_2 \cdot 6\text{H}_2\text{O}$, luminescence, and H bonding 4=22935
 Mg $(\text{HCOO})_2 \cdot 2\text{H}_2\text{O}$, crystal struct. 4=23506
 Mn amines, mag. susceptibility, interaction and crystalline field 0=21027
 Mn formate $\cdot 2\text{H}_2\text{O}$, mag. props., and two kinds of Mn ion 4=26266
 MnBr $_2[\text{OP}(\text{C}_2\text{H}_5)_2]$ in acetonitrile soln., spectrum, and Mn $^{2+}$ electronic struct. 4=15349
 Mn $(\text{CH}_3\text{COO})_2 \cdot 4\text{H}_2\text{O}$, Cotton—Monton—Voigt effect 4=29777
 MnCl $_2 \cdot 2\text{C}_2\text{H}_5$, HCl, fluorescence lifetime and intensity 3=8613
 Mn $(\text{HCOO})_2 \cdot 2\text{H}_2\text{O}$, crystal struct. 4=23506
 Mn $(\text{HCOO})_2 \cdot 2\text{H}_2\text{O}$, paramagnetism, exchange interactions 4=13114
 N-containing heteronuclear molecules, N electro-negativity parameter, LCAO calc. 0=20682
 N 14 in ethylenediamine, n. q. r. temp. depend. from 77-280°K 4=7359
 N $(\text{C}_2\text{H}_5)_4\text{Cl}$, in water, osmotic coeff. from integral-equation theory 2=12353
 $(\text{NH}_4\text{CH}_2\text{COOH})_2 \cdot \text{H}_2(\text{SO}_4, \text{PO}_4, \text{F})$, ferroelectric props. 1=5038
 $(\text{NH}_4)_2\text{C}_2\text{O}_8$, crystal struct., atomic 4=29149
 $\text{NH}_4\text{HC}_2\text{H}_4\text{O}_6$, unit cell and space group 0=14037
 $\text{NH}_4\text{H}_2\text{PO}_4$, elastic resonances, optical observation 4=15562
 $(\text{NO}_2\text{C}_2\text{H}_5)_2\text{NO}$, h.f.s. and coupling consts., from e.s.r. 3=14183
 Na acetate, u.s. vel. 2=15589
 Na acetate, u.s. velocity rel. to molecular parameters 1=18403
 Na benzo-acetate, salicylate, luminescence, temp. var. and dosimetry 3=17117
 Na carboxymethyl cellulose, aq. soln., relaxation phenomena 2=2727
 Na carboxymethyl cellulose gel, diffusion of water 3=1403
 Na decyl sulphate, micelles 2=4569
 Na dodecyl sulphate, micelles 2=4569
 Na fluorescein aq., luminesc., KI quenching 3=3807
 Na-fluorescein, lumin. quenching in aq. and glycerin solutions 3=14173
 Na formate, chemical decomposition, by u.s., no change in H isotope ratio 4=13745
 Na metadinitrobenzene, spin distrib. 2=10280
 Na oleate, boiling heat transfer at coexistence of nucleate and film regions 4=27379
 Na perfluorosuccinate, X-irrad., e.s.r. spectra of free radical formed 3=20601
 Na salicylate films, spectra and luminesc., 1750-5000Å, room temp. and 80°K 4=28716
 Na salicylate, fluorescence, 2500-3200Å, as u.v. detector 1=2863
 Na salicylate, luminescence of coatings 4=17613
 Na soap films, electron diffraction patterns 3=16145
 Na uranyl acetate, exciton absorption spectrum 2=18849
 Nd ethyl sulphate, spin—lattice relax. and heating, low temps 4=17681
 Nd ethylsulphate, Faraday effect, influence of paramag. res. saturation 0=10216
 Nd ethyl sulphate, gnd. state pop. changes, dir. optical meth. 2=21238
 Ni amines, mag. susceptibility, interaction and crystalline field 0=21027
 Ni β -alanine dihydrate, crystal structure 4=7654
 Ni hexamine halides, motional and exchange effects in e.s.r. 4=26418
 Ni phthalocyanine crystals, spectra, absorpt., polarization 3=20495-6
 Ni $(\text{CH}_3\text{COO})_2 \cdot 4\text{H}_2\text{O}$, paramagnetism, 0.35-4.2°K 4=13114
 OH $^-$ ions, low-energy collision cross-sections in O_2 3=4012
 $(\phi_3\text{PCH}_3)^+(\text{TCNQ})_2^-$, spin—lattice relax. rel. to temp. 4=17684
 PPD, luminescence, scintillation 0=4447
 Pr ethyl sulphate, paramag. suscept. 2=16892
 Pt-dimethyl-glyoxime, structure 0=3252
 Pt ethanolamine compounds, luminescence 1=3855
 Pt phthalocyanine, dislocation dipoles rel. to fission fragments 3=20253
 Pt phthalocyanine, electron micrograph "lattice image" 4=26638
 trans-[Pt $(\text{C}_2\text{H}_4)(\text{NH}(\text{CH}_3)_2\text{Cl}_2]$, crystal structure 0=8235
 [Pt $(\text{C}_2\text{H}_5)_3\text{P}_2\text{HBr}]$, crystal structure 0=8236

Organic compounds—contd

- α -[Pt $(\text{SCN})_2\text{Cl}_2(\text{P}(\text{C}_2\text{H}_5)_3)_2]$, crystal structure 0=8237
 Pt(IV) and Th(IV) acetylacetonates, probable isomerism 0=8239
 Pu oxalates, decomp. by own α -particles 0=4735
 Rb tetraphenylboranate, crystal structure 3=20862
 S cpds., bond energies and next-nearest-neighbour interactions 0=1512
 SP $(\text{C}_2\text{H}_5)_3$, structure 0=3254
 S and Se cpds, u. v.-irrad, e. s. r. free-radical comparison 4=30473
 SeP $(\text{C}_2\text{H}_5)_3$, structure 0=3254
 SiH $_2\text{C}\equiv\text{CH}$ and SiD $_2\text{C}\equiv\text{CH}$, i. r. spectra 4=12492
 SiH $_2\text{F}_2$, H—H distance calc., appl. of inertial defects 4=22338
 SiR $_3\text{H}$, where R is alkyl and X halogen, mag. props. and bond interactions 4=30467
 Sm ethylsulphate, Sm $^{3+}$ spectrum anal., term diagrams, mag. sp. ht. 0=10047
 Sm $(\text{C}_2\text{H}_5\text{SO}_4)_3 \cdot 9\text{H}_2\text{O}$, Zeeman effect 1=6207
 SmR $_2$ (R is organic radical), for possible maser, optical, by internal energy transfer 3=17072
 Sn cpds, Mössbauer effect, Sn—Sn and Sn—C bonds 4=25717
 Sn—organic cpds., Mössbauer effect rel. to γ -irrad. 3=17633
 Sn—organic, Mössbauer spectra anomalies, rel. to chemical bonds 3=744
 Sn tetraethyl, paramagnetic proton resonance spectra 1=12310
 Sn $(\text{C}_2\text{H}_5)_4$, Mössbauer effect 3=8340
 Sn $(\text{C}_4\text{H}_9)_2\text{X}_{1-2}$, X = O, S, halogen, SO_4 or SO_3 , Mössbauer obs. 4=28332
 SnCl $_4$ -ester complex solution, Raman spectra 4=5189
 SnCl $_4$ -ester complexes, Raman spectra 2=18468
 SnCl $_4$.CH $_3\text{CN}$ molecular force const. calc. 4=6606
 Sr $(\text{HCOO})_2 \cdot 2\text{H}_2\text{O}$, i. r. reflection spectrum 4=7165
 Tb hexa-antipyryne tri-iodide, fluorescence, effect of substitution 1=11401
 Tb tri-anthranilate, fluorescence spectra, lifetimes 3=8628
 Th(IV) and Pt(IV) acetylacetonates, probable isomerism 0=8239
 Ti(III) acetylacetonate, e.s.r. 3=8715
 Ti $^{3+}$ in alcohol and glycerol, e.s.r. and absorption spectra 3=1712
 Tm ethyl sulphate, Mossbauer effect and electronic shielding 4=20171
 Tm $^{169}(\text{C}_2\text{H}_5\text{SO}_4)_3 \cdot 9\text{H}_2\text{O}$, Mossbauer effect, and n. q. r. temp. var. 4=3965
 V tri-dipyridyl 3,5 tetrahydrofuran, space group 2=23859
 V(dipy) $_2$, mol. electronic struct., ligand field theory 4=22412
 X $(\text{CH}_3)_4$, C 13 —H and X—H coupling consts. 4=1317
 Zn $(\text{CH}_3)_2$, Raman spectra, rotational anal. 1=844

Oscillations

 exchange, collisions 2=3679
 inviscid flow between rotating cylinders, non-rotationally
 symm. disturbances 3=1714
 Jacobi, Maclaurin and Jeans spheroids,
 stability 3=16681-4
 liquid columns, viscous damping 4=138
 magnetron, plasma-filled; analysis 3=6290
 nearly linear, harmonically forced van der Pol eqn.,
 general perturbational soln. techniques 2=7
 nonlinear, use of method of averaging 4=16165
 nonlinear sampled-data systems, method of deter-
 mination 3=6500
 nonlinear systems, principal mode def. 2=4
 nonlinear systems, transitional processes, differential
 eqns. 4=8018
 non-linear theory 0=11037
 non-linear, in weak external fields 0=16602
 operational amplifiers, relation to computer errors 3=6564
 oscillator, hard-spring, randomly excited 1=15995-6
 parametron, amplitude limiting and hysteresis 3=4985-8
 particle, in fluid wave 2=13317
 particle, nonlinear, in a long wave in rotating
 fluid 0=10642
 pendulum with viscous liq. filling the cavities,
 calc. 4=8122
 periodic classical systems, adiabatic
 invariants 0=50
 piston in shallow fluid-filled cavity 2=13398
 plates, in non-Newtonian fluid flows 0=14602
 quartic oscillator, energy levels and matrix
 elements 3=14030
 quasi-discontinuous, model 3=1743
 relativistic oscillator with natural forcing
 functions 1=10408
 relativistic oscillator, nonlinear, damping effects 4=8041
 Roche stellar model, non-radial oscillations 0=18862
 self-excited, in closed pipe 4=5281
 self-sustained, in relay sampled-data systems 3=6501
 in solids, small-amplitude, theory 1=14860
 space charge in semiconductors 0=6086
 subharmonic, in Melde's expt. 0=6847
 subharmonic, nonlinear system 2=13390
 theorems for finite degrees of freedom 3=7086
 thermal-mechanical coupling 3=9380

Oscillations—contd

- thermally stratified fluid under gravity, stability 4=24134
 thermoelastic, isentropic motion, finite deform. 3=18883
 threshold, atomic hydrogen maser 3=6106
 torsion pendulum, meas., carrier freq. device 4=4997
 torsional, in rods 2=15670
 in transport process systematization 3=5392
 two-dimensional, pendulum analogue for accelerator
 particle oscillations 0=19835
 two solids in friction 1=5320
 two-superposed fluids, classification of possible
 oscillations 0=18860
 viscoelastic fluid normal stresses 4=14124
 viscoelastic fluid in pipe 4=29598
 in viscoelastic medium, between parallel
 planes 0=3502
 weakly coupled nonlinear systems, beating 0=19242
 Al rods, torsional, temp. generated 2=23741
 Al tubes, torsional, heat generation meas. 2=21417
 He gas, spontaneous vibrations in 0.3 mm tube,
 10-20°K 0=19203
 He-Ne laser, 0.63-3.39 μ m, behaviour and reciprocal
 action 4=16700

Osmium

- atomic spectrum, isotope shift meas. 2=16482
 cathodic sputtering, thin films prep. 2=9648
 crystal structure and occurrence in minerals 2=2397
 electron emission, field, meas. 4=11691
 in iron meteorites, meas. 0=12273
 radioactive dating, isotope and Os/Re ratios 2=4758
 spectral structure, neutral and ionised 1=8816
 superconducting, isotope effect meas. 3=19121
 vaporization data and boiling pt. 2=17694
 vapour pressure and heat of sublimation meas. 4=24459
 Os I, atomic hyperfine str. quadrupole
 coupling 2=16484
 Os I, II, energy levels, spectral data, Zeeman
 effect 0=20588
 Os I and II, structure and Zeeman effect 1=2293
 Os⁷⁶, L-emission spectrum, quad. and forbidden
 lines 2=12293
 Os¹⁸⁴, spectrum, relative isotope shift 2=3705
 Os¹⁸⁶, relative isotope position 2=22910
 Os¹⁸⁷, spectrum, relative isotope shift 2=1779

Osmium compounds

- complexes, charge and type of chem. bonds 0=20672
 with rare earth, Curie points and mag. moments 0=1776
 semiconductors, resistivity and diamagnetic
 measurements 4=1618
 superconductivity 3=24148
 Os(IV) cryst. hexag. complexes, neutron-irrad., nuclear
 recoil defects annealing 2=21006
 Os hexabromo-complexes, Br⁸⁰%-separation 2=17101
 Os hexahalide complexes, electron transfer
 spectra 0=20650
 Os oxide, use as shadowcasting material in electron
 microscopy 1=2553
 Os-As or Sb-S, Se or Te, semicond. props., crystal struct.,
 atomic 4=26056
 Os-B, orthorhombic phase (probably OsB₂)
 structure 2=23866
 Os-B system, crystallography 1=10260
 OsC, preparation and crystal structure 1=1399
 OsF₆, absorption spectrum and magnetic
 properties 1=3543
 Os-Ir, crystal structure and occurrence in
 minerals 2=2397
 Os-Ir equilibrium diagram 4=26563
 Os-Ir, superconductivity 3=3962
 [Os(NH₃)₆]Br₃, charge and bond detm. by L_{III}
 absorpt spectrum 2=14693
 Os-O system, ionic species formed at high
 temp. 0=14971
 OsSb₂, structure 1=4049

Osmosis

- aqueous solutions, osmotic coeffs. using thermoelectric
 differential v.p. method 4=8196
 binary systems, thermodynamic limit 3=14151
 electrolytes, symmetrical, osmotic term in relaxation
 field 4=10643
 electro-osmosis, a.c. 0=2313
 electro-osmosis, effect on electrodiffusion 2=1141
 electro-osmosis, in electrophoresis 2=15147

Osmosis—contd

- electro-osmosis through collodion membranes 2=11612
 flow through charged membranes 4=23668-9
 gas thermo-osmosis through polymers, press. difference approach to steady state 4=29172
 ion-exchange membrane systems, diffusion-exchange of exchange ions and nonexchange electrolyte 0=4714
 osmotic press. rel. to solvent conc. 2=17454
 polymer membranes 1=15848
 polymer solns., osmotic press. calc. 0=14641
 polymer solns., second virial coeffs., rel. to mol. weight 3=3802
 polymer solutions, second virial coeff., light scatt. meas. 4=2669
 polymers, second virial coeff. 2=6242
 polystyrene solns., second virial coeff. calc. 3=16615
 solute-permeable membranes 0=8659
 solute permeation through membranes, invest 2=11363
 solvent and ion transport through membranes 2=5007
 system of charged particles, osmotic coeff. by statistical mech. 2=12353
 He³, in liq. He⁴, refrigerator for <1°K 3=5565
 Hg, electro-osmosis, temp. depend. 0=5269

Oxidation

- acetylene, chemi-ionization by O atoms 3=16904
 acetylene, in shock waves 1=11618
 acetylene in shock waves, ionization produced 2=23959
 anodes, ion transport mechanism 3=13616
 benzaldehyde- α -t with aqueous acid chromate 0=1953
 beryllides, "pest" degradation 4=29169
 carbonized anthracite aggregates, contact resistance 3=8545
 carbons, formation of spin centres 2=12816
 electric field effects, proposed obs. in triode 4=20829
 electron microprobe examin. 3=3377
 getters 0=3572
 graphite, effect on rhombohedral modification, by X-ray diffr. 3=18309
 graphite, electron microscope study 0=21260
 graphite, by gases, theory 2=23956
 graphite, imperfections as active sites 2=3925
 graphite, in O and air under flow conditions, 1000°-1400°C 4=29211
 graphite, structural aspects, study 3=20985
 graphite, thermal 3=25821
 growth kinetics of oxide films, discontinuous 4=29041
 ionization, mass spectrometer shock tube study 4=13713
 kinetics, gas, 1-100 msec, by adiabatic compression 3=20981
 magnesiowustite single crystals 3=20986
 magnetite, rel. to elec. resist. and temp. above Curie pt. 2=12499
 mesonaphthodanthrene, photo-oxidation 0=21289
 metal films, layer formation, 1.5°-100°K meas. 4=7754
 metal oxide films, space-charge distrib. 1=11593
 metal thin film surfaces, emission microscope obs. 2=21565
 metallic films, rel. to optical transmission and resistance 4=20801
 metals 3=20984
 metals, rel. to adsorption rate 1=2546
 metals and alloys, at low press., gravimetric determ. apparatus 4=13711
 metals, films, and absorption, light 3=17991
 metals, oxide film growth, homog. field approx. 4=7753
 metals, oxide film growth, kinetics 3=25775
 metals, during vaporization in Ar + O₂ 3=24120
 metals, X-ray diffraction examination 4=13623
 methane, acetylene, C₂H₂⁺ ion formation 4=13713
 methane, in shock waves, mechanism 4=17859
 methanol, using photosensitized ZnO 4=23652
 oxidation-reduction reactions in solutions, electron-transfer processes 0=19171
 oxide films, growing, space charge, rate effects deduced by averaging technique 4=23563
 parabolic growth law for oxide films 4=26745
 photosensitized oxidation of phenol by dyes 1=7919
 polymers, i. r. spectroscopic study 4=4697
 positronium, in chloride solns. 1=18436
 rubber, stress effects, cyclic, smoked-sheet 4=23619
 semiconductor formation, effect of equilibrium conditions 3=25824
 steel, during mild wear 2=4349
 sulphate radicals, conc. meas. by chemiluminescence 4=2151

Oxidation—contd

- transition-group complexes, oxidation-reduction reactions 0=21280
 transition metal oxides, prep., use of CO-CO₂ atmospheres 4=15640
 water, to H₂O₂, by X-rays 1=15360
 wüstite, O/Fe ratio rel. to oxygen press. 3=5076
 Zircalloy and Zr, at high temp., in O₂ and H₂O 4=15254
 Ag films, by heating or irradi., electron diffr. study 2=12959
 Ag liquid surface, and surface tension 4=11190
 Al alloys, anodic oxide films, microanalysis 4=7711
 Al, direct electron-microscope obs. 3=11336
 Al, effect on electron energy loss spectrum 0=9880
 Al, films 0=8335
 Al films 2=12944
 Al, films, reflectivity decrease 3=23039
 Al, growth kinetics of oxide films, discontinuous 4=29041
 Al, oxide film formation, electron microscope study 1=4080
 Al, small crystals, ~0.025 μ diameter, rel. to melting anomalies 4=9861
 Al-Fe alloys 1=15129
 Al₂O₃ film formation 2=10938
 Bi, anodic oxide film formation 2=15151
 CO, catalytic, elec. cond. of catalyst MnO₂ 1=5111
 CO, on NiO catalyst, mechanism 4=17862
 Co, films, and absorption, light 3=17991
 Co submicron whiskers 3=23412
 Co, ZnO photosensitized, kinetics, activation energy 4=17869
 Co-Al alloys, around Curie point 3=11337
 Co-Pd, reactivity, anomaly, at Co Curie point 3=20982
 Cu, for Cu₂O crystal growth 4=13531
 Cu, to Cu₂O, crystallite growth 2=16986
 Cu, effect on elec. cond. and chemoemission, up to 600°C 3=2012
 Cu, effect on mag. props. 2=12756
 Cu, electron-diffraction study 3=13417
 Cu, electron microscope obs. 3=18435
 Cu, electron microscope study 1=2554
 Cu, and film growth mechanism 3=23516
 Cu, films, and absorption, light 3=17991
 Cu films, X-ray reflection study 0=14089
 Cu, using gas reactor for transmission electron microscopy 4=29220
 Cu, high temperature 4=23639
 Cu, kinetics 4=23526
 Cu, needle growth 0=6331, 13960
 Cu, 250-450°C, CuO whiskers 1=6502
 Cu, whisker growth of CuO is of no importance 4=29212
 Cu-Bi alloys 3=18221
 CuCo, CuFe, CuMn, dilute alloys, internal, effect on elec. resistivity 0=17996
 Cu-N, alloys, under various conditions 0=16375
 Cu-Ni, oxide film formation 3=18432
 Cu-O soln. and Cu₂O after annealing, 750°-1050°C 2=12962
 Cu₂O, pulverized, to CuO 0=16371
 Cu-S, scale formation, causes and mechanisms 4=23640
 Cu-Si alloys 3=18221
 Dy³⁺ in CaF₂, Dy³⁺ → Dy²⁺ photo-reduction by γ -rays and thermal reoxidation 4=23679
 Fe, Armco, diffusion of Fe ions 1=6112
 Fe, in atmosphere of Ar + 10% water vapour 3=3268
 Fe, Fe-C submicron whiskers 3=23412
 Fe, films, and absorption, light 3=17991
 Fe, by O₂ and water vapour, rel. to imperfections, electron microscope study 1=4077
 Fe oxide films on Fe single crystals, electron diffraction study 4=26711
 Fe oxide growths, rel. to surrounding gas 3=18433
 Fe, using gas reactor for transmission electron microscopy 4=29220
 Fe whiskers, resistance to 2=12960
 Fe-Al alloys, around Curie point 3=11337
 Fe(NH₄)₂(SO₄)₂, aq. soln., radiation-induced 1=1490
 GaAs wafers in oxygen stream 3=2943
 Ge films, at low temp. 1=1481
 Ge films, X-ray reflection study 0=14089
 Ge, nucleation of oxide, dislocation effects 3=25276
 Ge, rel. to orientation, temp., and O₂ pressure 0=12097
 Ge, surface, kinetics 1=5102

Oxidation—contd

Ge surface, selective 4=30896
 Ge thin films 2=23957
 H_2 , catalytic, by Ni-on-CrO₃, simultaneous isotopic exchange between H_2 and steam 4=7758
 H_2 , combustion delay surfaces 4=17858
 KI solns., effect of relax. due to u.s. 2=11370
 Mg crystal faces, oxide film growth 3=23512-13
 Mg, effect on electron energy loss spectrum 0=9880
 Mg, single crystals and films 3=11335
 Mn ferrite solid solns., effects on structure and mag. props. 2=4232
 Mo, by dissociated O, kinetics 4=26743
 Mo, 1500°-2600°K, mass-spectr. study 4=4695
 Mo oxides, 230-350°C 0=18345
 MoSi₂, 1400°-1700°C meas. 4=13716
 MoSi₂, "pest" degradation 4=29169
 Mo-Si-Be system, at 1000°-1200°C 4=10638
 Nb, anodic film structure 3=23507
 Nb-Sn diffusion specimens, superconducting, anodic oxidation, intermetallic compound existence 4=27430
 Ni, films, and absorption, light 3=17991
 Ni films, by ion bombard. 0=10988
 Ni films, rel. to magnetic properties 3=15823
 Ni films, X-ray reflection study 0=14089
 Ni, mechanism 4=13710
 Ni, O₂ interaction with clear (111) surface 4=7702
 Ni particle catalysts, electron diffraction study 0=4764
 Ni, surface temp. increase 4=23641
 Ni, temp., effects on water boiling on wire 4=11423
 Ni, using gas reactor for transmission electron microscopy 4=29200
 NiAl, "pest" degradation 4=29169
 Ni₃CO, ordering detected at 773°C 0=16355
 Ni-Si alloys, 1000°-1200°C 4=23642
 O¹⁸ atoms with NO₂ 3=13598
 P³² produced in Cl³⁵ (n, α) P³² processes in KCl crystals 4=7777
 Pd-Fe alloys, at 1200-1460°C 2=15140
 Pd-H soln. in constant current, anodic 3=5166
 ReSi, resistance to 3=872
 Se films, X-ray reflection study 0=14089
 Se, polycrystalline, rel. to conductivity ratio 3=17893
 Si, rel. to Al-dopant redistribution 3=17866
 Si, by boiling water, rate 2=21583
 Si, effect on B distribution 2=21071
 Si, effect of electric field 2=19143
 Si, and film growth mechanism 3=23516
 Si films 2=23957
 Si oxide films on Si surface, growth versus time, parabolic relation 4=7564
 Si, oxide films on surface, 300°-1000°C 3=25439
 Si with oxide film, oxidation rate determ. 4=4277
 Si, at 600-1000°C 2=15141
 Si surface, p- to n-type conversion, min. resistivity 4=12911
 Si, thermal 2=21584
 Si, thermal, rel. to acceptor and donor impurity redistrib. 4=28572
 Si, thermal oxid. mechanism 3=13600
 Ta, anodic, film structure 3=23507
 Ta, 500°-700°C 2=10970
 Ta₂O₅ film formation, effect of Frenkel defects 1=20675
 Ti, effect of O₂ formed during TiO₂ reduction 4=23643
 Ti, 500°C, electron microscope study 3=18434
 Ti, surface film structure meas. 4=15808
 Ti, Ti oxides scale, structure 1=12661
 TiB₂, "pest" degradation 4=29169
 Ti-Fe alloys, dilute 2=10975
 TiO₂ growth on Ti at 482°C 2=7370
 U, oxidized in air at increasing temps. 3=3250-1
 U, from X-ray M_V emission, spectrum last lines 3=23558
 W, 1500°-2600°K, mass-spectr. study 4=4695
 W, pure and carbon-containing 1=5109
 WS₂, 650-1500°C, weight var. 4=13715
 Zn films, atmosphere corrosion, kinetics 4=26748
 ZnF₂, by air, growth of ZnO crystals 2=4383
 Zr, anodic film structure 3=23507
 Zr films 4=4696
 Zr films, oriented 4=26715
 Zr, surface temp. increase 4=23641

Oxide cathodes

See Cathodes, oxide.

Oxygen

absorption coeffs. at high temp. 0=7120
 absorption coeffs., 1060-580 Å, rel. to dissociation and ionization 4=9723
 absorption line, 2.53mm wavelength, shape, intensity and pressure broadening 4=17288
 absorption spectrum, visible and u.v. 0=1533
 with admixtures, thermal relaxation 4=5244
 adsorbed, on Fe, i.r. spectrum 2=23963
 adsorbed on metals, effect on elec. cond. and superconductivity 3=16872
 adsorption on CdS single crystals, surface states 4=28421
 adsorption on Cu₂O, mag. susceptibility changes 4=23596
 adsorption on GaSb 4=4673
 adsorption on Ge, effect of water vapour 0=16395
 adsorption on Ge, effect on work function 0=9059
 adsorption on Ge, influence on free charge carriers 1=17684
 adsorption on Ge, kinetics and mechanism 3=3365
 adsorption, on Ge and Si, sticking probab. regeneration of clean surfaces 1=11597
 absorption on Ge, surface electron energy distrib. 1=1045
 adsorption, on Hg surface 2=1126
 adsorption, on ice, effect on mag. props. 2=16895
 adsorption, on Ni, (110) face, O-Ni structures 2=23921
 adsorption, on Ni films, effect on elec. resist. 3=20271
 adsorption on Ni oxide, crystal field effects 3=13573
 adsorption on NiO, neutron effects 3=13567
 adsorption on Pt and C-supported Pt, partial molal enthalpies of adsorption 4=26721
 adsorption on Pt, electron diffr. study 4=23602
 adsorption on semiconductors, rel. to eye melanin free radical kinetics 4=20975
 adsorption on Si 0=12116
 adsorption on Si, e.s.r. obs. 4=26723
 adsorption on Si and Ge, elec. diffraction study 4=20824
 adsorption on W 0=21297
 afterglow and night airglow, 3350-4500 Å 0=5954
 airglow, auroral green line, prod. 2=4659
 in airglow, day and twilight, (0,0) band obs. at 1.27 μ 3=18553
 analyser for O₂, by gas-phase polarography at low press., -20° to 80° C 4=26774
 analysis in biological materials, polarographic microelectrode 1=12683
 analysis of > 0.3 p.p.m. in transistor-grade Si, by α -activation 1=6581
 arc plasma, Stark-broadened spectral lines, shifts and widths 3=24277
 atmosphere content, rel. to positive ion variations 2=8989
 atmosphere, O/O₂, 100-135 km, by mass spectrometer, rocket-borne 3=18522
 atmospheric, absorption of e.m. waves 0=12717
 atmospheric microwave spectra 3=13679
 atmospheric, origin 2=15181
 atmospheric, origin, rel. to solar "wind" 1=20811
 atmospheric oxygen, hypothesis on origin 1=20810
 atmospheric, solar rad. absorpt. 2=17143
 atom charge transfer with O⁺, H⁺ 4=24593
 atom concentration, e.s.r. meas. 2=3792
 atom, electron capture by protons 3=15303
 atom, 5577 Å line, by α -radiation of N₂-O₂ 4=15287
 atom, free-free continuum spectrum, rel. to polarization and exchange 3=17531
 atom and O₂, excited, electron impact ionization meas. 4=11537
 atom, O III, emission spectrum, asymmetric auto ionized lines 4=15285
 atom, O II and III lines, relative oscill. strengths 4=15284
 atom, 1s²2s^m2pⁿ states, self-consist. field functions 3=19942
 atom, radiative recombination coeffs., into low-lying excited states 4=19942
 atom reaction with CO 3=5159
 atom reaction with olefins, rate meas. 3=11341
 atom recombination 0=2728, 18430
 atom recombination by Ar catalysts 3=13595
 atom recombination in inert gases 3=13597

Oxygen—contd

atom recombination on Pt surface 0=6402
 atom, recombination rate constants, three-body 4=17852
 atom recombination rates 0=6405
 atom recombination, surface catalyzed 0=18428
 atomic, chemiluminescence, in O and N reactions 3=25819
 atomic, reaction with NO₂ 2=20891
 atomic, recomb. to O₂, e.s.r. study 2=16494
 atomic recombination, by e.s.r. 3=25068-9
 atomic, recombination on surfaces 1=20743
 atomic, scatt. factor for X-rays 2=15010
 atomic scattering factor of O²⁻ 0=8197
 atomic system, continuous absorption coeff., rel. to stellar atmospheres 3=3599
 atomic, thermal cond. and viscosity calc. 2=9316
 atomic, wave-functions 2=8059
 atoms, appearance potential and scattering cross-section 2=20890
 atoms, aspherical scatt. factors in sp³, sp² and sp valence state 4=26626
 atoms, charge exchange cross-sect. with N₂ molecules, at low-energy 2=22173
 atoms, charge transfer with atmospheric ions 3=14531
 atoms, diffusion in O₂, using tubular flow reactor 1=12920
 atoms, electron scatt. bremsstrahlung-elastic cross. rel. 4=15299
 atoms, electron scatt., low-energy, cross-sect. abs. meas. 4=25568
 atoms, electron scatt. total cross-section, 2.3-11.6 eV, using O₂ beams 1=11079
 atoms, excited, quenching abilities of Xe, Co₂, H₂, Kr, SF₆, C₂F₆ 4=6491
 atoms, gaseous, transport coeffs., calc. 0=3565
 atoms, ionization by electron impact 2=3001
 atoms in lightning stroke near peak temp. 4=23765
 atoms, O¹⁷, h.f.s., calc. 0=20550
 atoms, O¹⁷, hyperfine consts., calc. 2=22898
 atoms, photoionization 1=1888
 atoms, photoionization cross-sections 4=19978
 atoms, polarizability, dipole, calc. 0=9736
 atoms, reaction with simple mols. in matrix 4=25757
 atoms, reactions with isobutane 3=11340
 atoms, reactions with NO and NO₂ 4=29215
 atoms, three-body reaction discounted as airglow 5577 Å line mechanism 1=1552
 atoms, wave-functions, analytic 0=15637
 attachment coeff. meas. 2=5300
 attachment coefficient data 0=2316
 attachment coeffs., for slow electrons 0=8995
 auroral spectra, lines excited by particles 2=2513
 β-phase solid, neutron diffn., structure, consts. 4=29127
 breakdown, microwave, meas. 3=14560
 charge transfer cross-sections 3=14530
 chemical analysis, by thermal cond. var. in mag. field 4=29245
 chemical reaction O + NO₂ = NO + O₂, via NO₃, isotope exchange 3=18436
 chemical reactions, in upper atmosphere, bimolecular, rates 4=13719
 chemi-ionization in atomic mixtures with N 3=25820
 chemisorption on CdS, elec. cond., contact potential obs. 4=29194
 chemisorption on and diffusion in MnO₂ 4=20823
 chemisorption, on Ge 0=10368
 chemisorption on Ni, mechanism 1=20687
 chemisorption on NiO after neutron irradiat. 3=3366
 chemisorption on semiconductors 4=20832
 chemisorption on W filament, detector using work function prop. of W 4=10683
 chemisorption on W, 20° and 300°K 3=3396
 chemisorption on Zn oxide 2=6693
 compressibility coefficients, law 1=9417
 concentration determ. in fluids, galvanic cell 4=7806
 concentration in gases, electrochemical meas. 2=4579
 condensed film at low temp., optical props. 0=740
 content in liquid metals, meas. 1=16209
 content, rapidly changing, in gas mixtures, absorption spectroscopy meas. 0=4755
 crystal struct., atomic, γ, 50°K 4=23441
 cyanogen flame, seeded, plasma stream prod. 2=3036
 d.c. glow discharge, ion balance 1=16288

Oxygen—contd

detonation of H₂-O₂ mixtures 1=11623
 detonation, marginal, of mixtures with H₂, effects of additives 2=19147
 detonation, with 2H₂ + 2CO 1=7908
 diamagnetic susceptibility calc. 2=3682
 dielectric constants, audio frequency meas. 4=27227
 diffusion, in CO₂, CH₄, H₂, CO and H₂O 2=2764
 diffusion in CaF₂, meas. 4=12786
 diffusion in calcium aluminoborate and aluminosilicate glasses 4=28610
 diffusion and configuration in Si and Ge 4=28485
 diffusion in gas mixtures at high temp. 0=3563
 diffusion in GeO₂, liquid and solid 3=20224
 diffusion in Ge and Si, calc. 1=17560
 diffusion, in Nb, 2145-2350°K 4=22620
 diffusion, in NiO crystals 2=2100
 diffusion in Si during thermal oxidation 3=13600
 diffusion, thermal, in Zr 1=14326
 diffusion in TiO₂, quartz and quartz glass 3=2831
 diffusion, in UO₂, mech. 2=3944
 diffusion in W, activation energy determ. by internal friction 4=17446
 diffusion, self, in BeO, 1500-2000°K 4=12784
 dipole moment induction, orbital calc. 2=20792
 discharge, electric, positive column oscills, freq. var. with dimensions, voltage 4=8650
 discharge, glow, ions, mass spectrometry 3=14552
 discharge, point-to-plane 2=9545
 discharge, positive column fields, 10⁻⁶-10⁻² Å 3=19213
 discharge positive column, low-gradient form, connection with moving striations 1=16285
 dissociated, viscosity, heat transfer 1=6878
 from dissociating CO, adsorbed on Ta, field emission patterns 4=26726-7
 dissociating, gas, high-temp. transport props. 2=13372
 dissociation, A, Kr, Xe catalysis efficiencies 2=10981
 dissociation by electron impact, O⁻ prod. 3=361
 dissociation in ionosphere rel. to comp. 4=23803
 dissociation in microwave discharges, catalytic effects of foreign gases 0=7737
 dissociation of O₂-A in shock tubes 2=23005
 dissociation rates, shock tube determination 1=10295
 dissolved in aqueous solns., meas. using temp. compensated electrodes 4=10645
 dissolved in V, mobility, effect of pressure 1=2396
 e.s.r. in solution, influence of dissolved O 0=14663
 effect, on e.s.r. line widths of solutions, of dissolved oxygen 10521
 effect on fatigue life of Pb 4=13421
 effect on photoelec. emission of Ni films 0=19720
 effect on precipitation of Li in Ge 0=12078
 effect on surface mobility of Sn atoms 4=13684
 effect on Ta solid films 4=13685
 effect on vitreous silica crystallization 4=23348
 effect on work function of Ba-coated W 0=9064
 effects, on Se, polycryst., elec. cond. 2=8278
 effects on surface props. of Ge and Si 4=20795
 elec. breakdown, current increase 0=9021
 elec. discharge, gas-ionizing radiation 2=17795
 elec. discharge, O atom conc., time depend. 0=2332
 elec. discharge, r.f., in Ne-O₂ and A-O₂, optical maser action 2=22908
 elec. discharge, spatial expansion 2=3013
 electric sparks in, channel expansion 1=18790
 electrodeless discharge, electron mobility meas. 0=7094
 electron affinity 0=8996
 electron affinity, review 0=1504
 electron attachment coeff. 0=5277, 8480-1
 electron attachment and ionization meas. 4=5556
 electron attachment, at low-energy 2=13536
 electron avalanches, in uniform elec. fields, electron component 1=272
 electron beam energy losses in 0=19764
 electron capture, from fast alkali-metal atoms 2=11618
 electron conductivity after weak ioniz. 3=3839
 electron interchange, with H atom beam 2=14182
 electron irradi., free electron loss 3=14598
 electron mobility, in O₂ 2=7562
 electron scatt., elastic and inelast., from electron transport 4=11509
 electron scatt., multiple, 40-130 keV, spatial distrib. 4=887

Oxygen—contd

electron stopping power 0=352
 electron trapping by impurity in liquid argon 3=19175
 energy of solution in Ag 2=12928
 enriched water, O^{17} , n.m.r. 2=1170
 equation of state and thermodynamic props. 4=2723
 equilibrium props. behind shock waves 3=21493
 ether- O_2 mixtures, onset of detonations 2=12965
 exchanges, chemical, O^{18} with O_2 , NO, NO_2 , mass spectrometry obs. 4=23645
 excit., of 8446 and 7774 Å lines in chromosphere 0=8507
 excited atoms and molecules, reactions, from flash photolysis of O_3 0=8319
 Faraday effect, anomalous 0=7772
 Faraday effect, theory 3=5468
 fluorescence quenching, organic solns., diffusion 2=9282
 flow, two-phase, idealized solutions 4=11152
 γ -irradiated, gaseous and liquid, reaction products, rel. to space flight 0=18440
 γ -ray absorption 2=5599
 gas, absorption and velocity of sound 3=9506
 gas, Aston bands, rel. to ionization 3=4020
 gas, discharge detector 3=8993
 gas, ionized, e. m. wave absorption, parabolic law 2=17950
 gas, microwave ionization, net frequency 3=9723
 gas, microwave (3 cm) breakdown in flowing gases 3=9516
 gas, permeability of Ag 3=13549
 gas release from glass, on electron bombardment 3=16124
 gas, second virial coefft. estim. 2=11414
 gas, sound velocity and absorption 3=9509
 gaseous, nucleation temp. 3=303
 gettering, electrical in low-pres. discharge in steel vessel 3=7461
 glow discharges, electron energy distrib. in plasma 1=16317
 glow discharges, ion emission, mass spectrometer study 0=9005
 h.f. electrical discharges, effect on coupled circuit 1=5425
 heat of solution, in Ag 2=20999
 heat of solution in Mg uranate 4=20714
 i.r. absorption, collision-induced 2=2775
 i.r. and red atmospheric absorpt. band systems, effect of high press. 4=6578
 impurity in NaCl, KCl, KBr, optical absorption and fluorescence 1=11563
 interaction with CdSe surfaces, meas. 3=11326
 interaction with incandescent filaments 0=1950
 intermolecular, Morse potential force consts. from viscosity 4=9787
 intermolecular repulsion, from intramol. oscill. relax., temp. var., from shock wave propag. 3=12881
 ion-atom interchange in upper atmosphere 0=14200
 ion-electron recombination in afterglow 2=3008
 ion emission, field 3=19371
 ion mass, discharge glow, O_3^+ , O^- , O_3^- 3=19183
 ion mass identification with wire filter 4=11510
 ion, O^{18} , charge distrib. at high velocities 3=7447
 ion-pair formation, by 100-300 kV X-rays 2=7560
 ion recomb. and electron capture, meas. from plasma density 4=21495
 ion scatt. by C, Mg and Al, elastic 3=19891
 ionic radius, calculation 1=11562
 ionization, attachment and breakdown meas. 4=8622
 ionization electron affinity meas. by beam, thermal motion effects 4=21454
 ionization, electron avalanches analysis 2=3003
 ionization, by electrons and protons, Born approx. 2=9529
 ionization and excitation, in hot stars 1=1653
 ionization by H^- and O^- 1=16269
 ionization potential-refractivity relation 0=2321
 ionization, in pulsed discharge 2=1387
 ionization by 10-50 keV H^- and O^- ions 0=12579
 ionization, by X-rays at 100-300 kV, ion-pair formation energy 2=15886
 ionized, slightly, cyclotron reson., collision freq. det. 4=461
 ionospheric, rel. to height and latitude 2=8987
 ions, bombard. of W-Ge and W-Si contacts, V-I curves 1=17771
 ions, electron attachment and detachment, simultaneous determ. 4=24592

Oxygen—contd

ions, electron capture from N_2 0=8997
 ions, energy loss and range in C, Al, Ni, Ag and Au 1=4668
 ions formed in mass spectrometer 0=10875
 ions, mobility, in O_2 and O_2-H_2O mixtures 3=12080
 ions, negative, source 0=12640
 ions, O^- , in Ca fluorophosphate, e.s.r. 2=23700
 ions, O^- , electron photodetach. and atomic electron scatt. 2=12298
 ions, O^- and O^{2-} , electron affinity and stability calc. 4=9643
 ions, O^- , photodetachment, final state effects 4=22317
 ions, O^- , prod. cross-sections and electron affinity 3=361
 ions, O^- , atmosph. concn., rel. to solar time 2=8981
 ions, O^+ , bomb. of metals, secondary emission 0=9078
 ions, O^+ , double charge exchange in inert gases 0=14978
 ions, O^+ , high-energy, in CO , mass spectra 0=19615
 ions, O^+ , resonance charge transfer with H atom 2=16492
 ions, O^+ , ^{45}S state, dielectronic recomb. 2=15889
 ions, O^{2+} , atomic parameters calc. 4=6482
 ions, O^{2+} , n.m.r. shielding constant 2=1970
 ions, O^{16} , energy loss in Ni, O_2 and nuclear emulsions 0=17051
 ions, O^{16} , tracks in nuclear emulsions 0=12777
 ions, O_2 , collision freq. with mols., var. with pressure 4=8626
 ions, O_2^- , energy absorption and emission, model 2=5306
 ions, O_2^- , in prep. of large Langevin ions 2=15167
 ions, O_2 , in atmos. at 400 km, formation 2=8990
 ions, O_2 , formation mechanism in ionosphere 2=15212
 ions, O_2 , line in nightglow 2=11074
 ions, O_2^+ , near i.r. spectrum meas. 2=16518
 ions, O_2^+ , O^- , O_2^- , O_3^- in pure gas, by mobility meas. 3=7438
 ions, O_2^+ , O^+ , O^{2+} , prodn. in atmosphere 2=19241
 ions, O_2^+ , 4I_1 multiplet anomalous splitting 2=18458
 ions, O_2^+ , 4I_1 multiplet splitting, spin-spin interactions 0=5965
 ions, O_2^{3+} , potential curves eval. 2=20816
 ions, O_3^+ clusters, bonding 4=17319
 ions, range and ionization in emulsions 0=12772
 ions, range in solids and gases 2=7674
 ions, scatt. from A and Xe meas. 2=16489
 ions, single, exosphere, distrib., 1500, 2000°K 3=16240
 isotope, O^{13} , predicted existence 0=13396
 isotopes, relative abundance, mass-spectra 3=12785
 isotopic analysis 2=20061
 K-LL spectrum, fine structure 0=17715
 laser action in atoms from mol. dissociation 4=11828
 liquid, absorption bands rel. to pressure (to 7000 atm), temp. (78°-300°K) and density 3=1692
 liquid, boiling, bulk density meas. 4=11432
 liquid, boiling point, absolute meas. 0=1086
 liquid, boiling temp. increase in mag. fld. 2=9456
 liquid, boiling, temperature grad. and convection processes 1=16144
 liquid, breakdown, electric, mechanism, impurity effects 4=5200
 liquid, cool-down conditions, in contact with various materials 4=11436
 liquid, density, rel. to press. 2=7190
 liquid, density, -190° to -120°C 2=2702
 liquid, density on saturation curve 1=4327
 liquid, diffusion of N_2 , gas phase method 4=5168
 liquid, elec. strength, electrode surface effects 0=12423
 liquid, miscibility with ozone and F 2=21904
 liquid, and mixtures with N_2 , X-ray diff. meas. 4=24170
 liquid N_2 diffusion in, meas. 2=9266
 liquid, Rayleigh line study rel. to temp. 1=18417
 liquid, structure, neutron diff. study, possible existence of O_4 0=12414
 liquid systems, binary, with N and A 3=132
 liquid, ultrasonic velocity 2=21908
 liquid, velocity of sound 0=124
 liquid, viscosity meas. 2=15541
 liquid, viscosity and mol. interaction 3=9423
 luminescence, chemi, in $H_2O_2-NaOCl$ solns. 4=24223
 luminescence in $NaOCl + H_2O_2$ solns., chemi- 4=5195
 in mesosphere, density 0=14199
 meteors, i.r. spectra 2=4757
 microwave dispersion, calc., 0.25 to 50 atm 1=12930

Oxygen—contd

- mixtures, binary, with N_2 and CO, sound absorption, relaxation, composition depend. 4=28285
 in mixtures with CH_4 , viscosity 1=4364
 mixtures, with H_2 , thermal and ordinary diffusion, u.s. velocity meas. 0=5049
 molecular absorpt. spectra, press. 2-35 atm, 12600-3600 Å 4=25677
 molecular beam techniques 0=2758
 molecular bond length by neutron diffraction 2=22960
 molecular excitation by electron impact 2=22974
 molecular pleochroism in O_2^{16} , rel. to parity nonconserv. 2=16517
 molecule, dissociation by Ar, statist. study 3=6423
 molecule, dissociation and vibr. rates meas. 3=7274
 molecule, ground state, parity impurity, upper limit 4=5957
 molecule, H_2O line width from collision 4=22439
 molecule, microwave absorption, pressure effect calc. 4=6579
 molecule, neutron scatt., quantum states transition 3=25074
 molecule, O_2 , Schumann-Runge band system, electronic transition moment 4=15339
 molecule, O_2 , vibr. de-excitation, in collisions, light impurity effects 4=20059
 molecule, proton scatt., two-state and multistate 3=25104
 molecule, rotational const. Bo, precise det. from microwave absorption 1=837
 molecule, rotational transitions due to He 3=6431
 molecule, Schumann-Runge band system, Franck-Condon factors 4=9721
 molecule, Schumann-Runge bands, electronic transition moments 4=15340
 molecule, Schumann-Runge bands, electronic transition moments, determ. 4=9722
 molecule, vibr. relax., in He and Ar mixtures 4=1269
 molecule, vibrational relax., 600°-2600°K 4=1268
 molecules, adsorption on W 2=23919
 molecules, adsorption on W 3=6887
 molecules, $B^2\Sigma_u^-$ state, pot. energy curves 2=12316
 molecules, collisional detachment and attachment coeffs. 1=5420
 molecules, dissociation and excitation of oscillations 2=12350, 14334
 molecules, dissociative charge transfer from He^+ 3=24224
 molecules, electron attachment coeff. at low energy 3=362
 molecules, electronic transition moment for Schumann-Runge bands 3=724
 molecules, far-u. v. spectrum 2=14284
 molecules, Franck-Condon factors and vibrational wavefunctions 4=6577
 molecules, nightglow spectrum, near i.r. 4=23779
 molecules, O_2 , 6300-3000 Å absorption spectrum 3=6395
 molecules, O_2^+ , vibrational spectrum 3=8266
 molecules, photo-ionization efficiency curves, 9-14 eV 3=24211
 molecules, Schumann-Runge system, emission intensities 2=543
 molecules, vibration, excitation by impurities, high temp. 3=17581
 molecules, vibrational relaxation 2=8079
 mutual diffusion with A, Xe, He 2=5050
 nightglow forbidden spectra, variations 1=21030
 nightglow, (0, 1) 8645 Å bands 2=15251
 nuclear relaxation in methane- O_2 mixtures 2=1210
 nuclei, O^{17-20} , energy levels in shell model 2=7933
 optico-acoustic effect 0=8715
 in organic solns., u. v. absorption spectra 2=5020
 oxide cathodes, influence on 1=16364
 oxygen-gas mixtures, paramag. effects due to viscous flow in mag. field 1=5297
 oxygen + inert gas, combustion and flow in boundary layer 1=4369
 paramag. resonance absorption, $O^{16}O^{16}$ and $O^{16}O^{18}$, g values 0=9821
 paramag. resonance in alkali halides 0=3127
 partial pressure gauge 1=9361
 peak electron density, curvature 1=15064
 photodesorption, in ZnO, temp. depend. 0=18074
 photodissociation, electronic transition moment calc. 4=28273

Oxygen—contd

- photodissociation in Schumann-Runge system 0=17721
 photoionization by solar Lyman- α radiation 1=11649
 photosorption and desorption on ZnO 1=4082
 plasma, isothermal, ambipolar diffusion at high temps. 4=14642
 positive ions, 5-25 keV, sputtering of Cu 1=8363
 positron annihil. in liq. and solid 3=17254
 positron annihil. mean life in liq. and solid 4=4031
 positronium formation and quenching meas. 4=19495
 positronium formation and quenching meas. 4=19496
 potential energy curves 0=17734
 props. at 1-30 atm., 1000=3000°K 0=7129
 proton beam, fast, discrete energy losses 4=11517
 quenching of luminescence, solute mols. in cyclohexane soln. 3=3810
 Raman spectra 0=17746
 Raman spectrum of liquid, laser stimulated 4=8210
 Raman spectrum, rotational and rotational-vibrational, gas at 1 atm 0=7763
 Raman spectrum at 7-125 atm 0=7764
 range-energy rel. to heavy ions in gaseous O_2 0=17051
 reaction with acetylene, induction times 2=4531
 reaction with H, i.r. emission 0=19221
 reaction $H + O_2 + M = HO_2 + M$, third-body efficiency 0=21272
 reaction with orthopositronium 0=3292
 reaction with sulphur in h. f. discharge 2=23958
 reactions at ZnO surfaces, $O_2^{18} + O_2^{16} = 2O^{18}O^{16}$, effect of u. v. irradiat. 0=8303
 recombination in elec. discharges, role of excited molecules 4=21464
 Redhead vacuum gauge sensitivity, pumping rate 2=21954
 refractivity, second virial coeff. 3=3835
 reversible poisoning of oxide-coated cathodes 0=5333
 saturated vapour pressure, exper. data., anal. and correl. 4=29803
 saturation, reflection oximeter design 0=8435
 scattering, $O^{16}-O^{16}$, rel. to nuc. interactions and surface 2=5973
 second negative system, new bands 1942-6532 Å 2=2001
 second virial coeff. and vel. of sound 0=16764
 self-diffusion in Al_2O_3 , temp. depend. 0=13562
 self-diffusion in MgO (periclase), 1300-1750°C 0=15873
 self-diffusion in PbO, oxidation process 3=20230
 shock-front structure and reflectivity 1=167
 shock fronts, non-equil. region, radiation 2=2757
 shock wave temp. 0=14732
 shock waves, attenuating, temp. variation, theory and expt. 4=18344
 shock waves, rate of dissociation 2=19597
 solid, absorpt. band at 1550 cm^{-1} 3=3010
 solid, α -phase, absorption spectra, 2300-8800 Å, electron irradiat. effects 0=5945
 solid, β -phase, structure 2=21509
 solid, crystal structure, atomic, mag. props., neutron diff. obs. 4=7633
 solid films, electron energy loss 2=1514
 in solid N_2 , spectrum, under electron bombard. 1=6221
 solid, phase transitions and compressibilities 0=12055
 solid, reaction with Cu, in microwave discharges at low temp. 0=14982
 solid, solubility meas. in 27°-33°K liq. H 2=11365
 solubility in Be, X-ray diffrac. study 3=20908
 solubility in distilled water 4=11184
 solubility in Ge, GeO_2 phase, i.r. determination 1=3662
 solubility in H_2O , heat and entropies 4=159
 solubility in H_2O , isotope effect 3=9450
 solubility in liquid H_2 , 20-33°K, 35 atm 0=75
 sorption coeff., Ti droplet getter-ion pump 0=16742
 sorption, on Fe films 1=1482
 sorption on NiO, MgO, neutron irradiated 3=13604
 sorption on NiO, 20-400°C 3=13603
 sorption by PrO_x , irregular press. var. 4=23601
 sound absorption and dispersion 0=19287
 sound absorption, pressure depend. 0=16737
 sound absorption, water vapour effects 3=18860
 sound propagation, low frequency 1=18521
 sound velocity, at b. pt. as temp. meas. 0=216
 sound velocity, sp. ht. calc. 0=5052
 specific heat, near critical point 4=5480

Oxygen—contd

- spectra, afterglow, rel. to atmos. spectra 2=15252
 spectra, airglow, synthetic 3=6989
 spectra, emission, excited by protons and H atoms 3=15338
 spectra excitation by reaction with active He 4=11533
 spectra of glow discharges 0=1520
 spectra in highly ionized state, meas. 3=10448
 spectra, O_2 and O, excited by 0.5-1 MeV protons 0=5942
 spectrum, atomic, fine Zeeman level transitions, e. s. r. 4=6481
 spectrum, O V, O III, 8000-480 Å 4=15286
 spectrum, O I, forbidden doublet, intensity ratio 0=15663
 spectrum, OI, 6 multiplet transitions, arc meas. 4=28134
 spectrum, O_2^+ , in hollow cathode discharge and aurora 4=22366
 spectrum, plasma, Stark effect of local fields 4=9646
 spectrum, Schumann-Runge system, Franck-Condon factors 3=10521
 spectrum, in Si, electron irradi., 1.5 MeV, new i. r. bands 4=28707
 surface-catalyzed excitation 1=11094
 target, heating by proton beams 2=3338
 in tektites, isotope ratio 3=9014
 temperature measurement after shock heating 2=2917
 thermal cond. rel. to viscosity 2=11423
 thermal conductivity of binary gas mixtures 0=3562
 thermal conductivity at 23° by bialorimeter 1=10550
 thermodynamic props., 20-100° K 4=11431
 thermosphere and exosphere, O^+ content, calc. 2=4682
 thin films containing O^{18} for nuclear spectroscopy 2=4492
 transition probabilities, O, and O_2^+ 0=11518
 transitions, 8.88-6.06 MeV, O^{18} 2=20522
 transport props. meas., rotational relax. 4=5241
 $2p^4\ ^1P-2p^33s\ ^5S$ transition, oscillator strengths 4=12372-3
 u. s. absorpt., relaxation time 3=18857
 u. s. absorption 0=14739
 ultrasonic absorption, relaxation time 4=5245
 vapour pressure above boiling pt. 2=13490
 vapour pressure of isotopic liquid 0=2168
 vibrational relaxation, effect of H_2 , D_2 and He 1=8163
 viscosity, mag. field depend. 1=1760
 viscosity meas. 0=16723
 viscosity, 200° to -100°C at 400 atm. 2=9291
 X-ray yield, on electron bomb. 2=14697
 Zeeman spectra, rotational fine structure 0=3869
 A-O system, vapour-liquid equilibrium 2=22097
 CdS, effect of heat treatment in O_2 2=4060
 in Cr, effect on ductile-brittle fracture temp. 4=30770
 on Ge, effect on surface levels 2=8343
 H-O system, solid-gas equil. meas. 2=11541
 and H_2O vapour mixtures, sound absorption 4=21185
 H_2-O_2 and acetylene- O_2 mixtures, combustion, effect of shock waves and bubbles 1=4500
 H_2-O_2 flame, emission absorpt., and temp. 3=5162
 In CdS, effect on photocond. 0=9992
 N_2 discharge, O_2 tracing by ionizing radiation from N_2 2=7570
 N_2-O_2 mixtures, pulsed discharges 2=5301
 O atom conc., quantitative meas. by e. s. r. 4=23687
 O VIII, impurity in deuterium plasma, X-ray spectra 3=7581
 O V cross-section due to electron impact 1=18767
 O VI, excitation by electron collisions 2=14224
 O green line intensity in nightglow, solar cycle variation 4=23786
 O I, 5577 Å, auroral linewidth rel. to temp. 2=4677
 O I 5577 Å emission in upper atm. 1=21017
 O I, 5577 Å in nightglow, height of layer 2=4665
 O I, intensity in solar chromosphere 2=15353
 O I lines in aurora, time delay 1=10334
 O I lines 6300-6364 Å in upper atmosphere 1=15300
 O I, quintet, triplet terms, below ionization limit 3=22487
 O I 6157 Å multiplet, transition probability 1=12251
 O I, 6300 Å airglow 2=15247
 O I 6300 Å emission of nightglow 4=26828
 O I, $2p^33s$ config., energy levels, oscill. strengths, mutual mag. interactions 1=810
 O I, visible spectrum, transition probability, meas. 2=3704
 O, spectral line intensities, oscillation, in toroidal discharge with mag. field 4=14651

Oxygen—contd

- O, transition probabilities, from Hartree-Fock-Slater wave-functions 4=12370
 O^* , isotope exchange and collisional deactivation 4=10634
 O^- , collisions in O_2 , CCl_4 and SF_6 , neg. ion formation 1=16269
 O^- , ionization of various gases 1=4558
 O^- , photodetachment spectrum 3=4003
 O^- recombination, on exposure to Ag surface 3=18442
 O^- and O_2^- collisional detachment cross-sect. on Ar, N_2 , 1-10 keV 4=27492
 O^+ and O_2^+ , atm. distrib., 130-430 km 4=26839
 O^+ , supra thermal, in upper atm., study 4=26863
 O^+ , $2p^44f$ config., vector coupling schemes 4=1181
 O^+-O collisions, charge-exchange and diffusion cross-sections, and interaction energies 4=22438
 O VIII Lyman spectrum from transient plasma 4=19963
 O^{4+} , electron impact ionization cross-section 3=5619
 O^{6+} , electron impact ionization cross-section 3=5619
 O^{6+} excitation cross-section 3=4713
 O^{6+} , 2^3s state, 20-parameter calc. 3=2561
 O^{15} atom, 3P_1 hyperfine splitting, rel. to nuclear mag. dipole moment and spin 3=19945
 O^{18} -ions, use for $Se^{76,78}$ Coulomb excitation 4=19689
 $(O^{18}\ O^{17})^{2+}$, ionization potential 4=2945
 O^{17} , hyperfine structure, by electron paramagnetic resonance 3=6353
 O^{17} n.m.r. in MgO 3=20682
 O^{17} n.m.r. shifts caused by Cr^{3+} in aq. solns. 3=9481
 O^{17} nuclear bombardment targets, preparation, improved technique 4=30099
 O^{17}/O^{18} abundance ratio, accurate formula 3=25071
 O^{18} , rain water content. 3=25897
 O_2 , adsorbed on Au, surface potential meas. 4=23598
 O_2 adsorbed strongly on C, interaction with free spin centres in C, paramag. res. study 4=20822
 O_2 , absorpt. cross-sections in 1050-1800 Å region 4=12466
 O_2 , absorpt. spectrum in far u. v. 4=15341
 O_2 , absorption lines, microwave frequency 3=22548
 O_2 , adsorption on metal films 1=1459
 O_2 adsorption on ZnO 4=10623
 O_2 afterglow, electron removal 3=4064
 O_2 auroral red spectral line, polarization 1=6638
 O_2 band excitation in nightglow 3=9103
 O_2 band spectra 3=10503
 O_2 breakdown formative time lags in pressurized spark gap 4=18759
 O_2^+ charge transfer cross-sect. measurements, rel. to ion beam excitation 4=24590
 O_2 collisions of He^+ 3=21707
 O_2 , corona, positive burst pulse formation, theory 3=372
 O_2 diffusion in Hf, 800° and 950°C 4=6872
 O_2 diffusion in rutile 4=1505
 O_2 discharge afterglow, ionic charge-exchange 1=277
 O_2 dissociation in auroral polar mesosphere 3=11450
 O_2 dissociation rates in O_2 -Ar mixtures 1=4926
 O_2 , dissociation, theory and expt. 4=25744
 O_2 , dissolved, emission spectrum, ligand-field splitting of antibonding orbitals 4=20058
 O_2^* , distrib. and relaxation in O_2 photolysis 4=10648
 O_2 , $(b^1\Sigma_g^+ - a^1\Sigma_g^+)$ transition 1=17312
 O_2 , effect of pressure on cation distrib. in spinel 1=20450
 O_2 , electron attachment coeff. 3=19174
 O_2 , electron interchange with H atom beam 3=6342
 O_2 , electron photoemission, retarding potential meas. 4=16435
 O_2 , electron scattering, collision cross-sections, oscillator strengths 4=20057
 O_2 , electronic collision cross-section and oscillator strengths in Schumann-Runge region 4=12467
 O_2 , excitation and dissociation by shock waves 1=2778
 O_2 flow-discharge, stratified, negative ion extraction 3=4063
 O_2^- , fluorescence spectrum in alkali halides 4=17605
 O_2 , Franck-Condon factors 4=27480
 O_2 , Franck-Condon factors of the Schumann-Runge band system 1=3552
 O_2 gas, fluorescence, possibility 3=9513
 O_2 gas, breakdown and ionization 1=7026
 O_2 gas, ionization by H^- and O^- ions 1=4558
 O_2 gas, thermal conductivity, 300° to 1100° K 3=16655

Oxygen—contd

- O_2 , glow, discharge, two forms, differences 4=2958
 O_2 high-temp., kinetic and transport parameters 1=18466
 O_2 , Hopfield's emission bands 3=8267
 O_2^- ion, characteristic frequencies, conditions of meas. 4=9688
 O_2 , interaction with Ge films at low temp. 1=1481
 O_2 interaction with Ni (100) face, struct. 4=23556
 O_2 , ionization, mass spectrometric meas. 3=12070
 O_2 , ionization by "monoenergetic" electrons 4=18684
 O_2 ionization by protons, 0.15-1.1 MeV 3=4006
 O_2 in liq. and crystalline Ar and N_2 , vac. u.v. absorpt. spectra 4=16116
 O_2 magnetoplasma, microwave gyro-interaction 4=18879
 O_2 , microwave absorption, freq. rel. to pressure 3=23938
 O_2 molecule metastable states by electron bombardment 3=4742
 O_2 molecules, electronic transition moments, 4000° to 9000°K 4=9700
 O_2^+ negative system excitation by proton beam in air 1=9927
 O_2 outgassing of glass, by electron bombardment 4=21204
 O_2 , photoionization and absorption at 600-1000 Å 4=25662
 O_2 positive ion production, by energetic He^+ impact 4=24569
 O_2 , Schumann—Runge band, Franck—Condon factor 1=7454
 O_2 , Schumann—Runge band system, transition moments, detm. 3=19987
 O_2 , shock front structure at high Mach numbers 4=18341
 O_2 , 6340 and 7030 Å emission bands 4=20056
 O_2 solubility in Nb alloys, rel. to magnetic susceptibility 1=20040
 O_2 , thermal conductivity, theory and expt. 4=21182
 O_2 in upper atmosphere, absorption spectroscopy data 1=6586
 O_2 vibration relaxation in O_2 —Ar mixtures 1=4925
 O_2 vibrational relaxation, in O_2 — H_2 mixtures 4=3928
 O_2 , vibrational relaxation times 4=28181
 O_2 , vibrationally excited by flash photolysis of NO_2 4=23675
 O_2^- , vibr., dissoc., from Raman spectrum of K_2O_2 , Na_2O_2 4=25661
 O_2^+ , u.v. excited, fluorescence 3=4753
 O_2 , atmospheric, in jet streams 3=21035
 O_2 dil. soln. in liquid N_2 , photolysis in u.v. 3=3408
 O_2 —A at 86°K, liquid, excess thermodynamic properties 1=8109
 O_2 — C_2H_2 —argon, free radicals in shock waves, flash absorption spectroscopy 0=17760
 O_2 —CO photolysis in solutions, 77°K 4=13734
 O_2 — CO_2 mixtures, detonation front motion 0=994
 O_2 — CO_2 , phase equilibria 0=8709
 $O(^1D)$ —CO photolysis, 77°K 4=13735
 O —H gas mixture, transport coeffs. at high temp. 4=3860
 O —H mixtures, gaseous predetonation 0=18436
 O —H, O —methane mixtures, viscosity variations under mag. field influence 1=158
 $2O_2 + H_2$ mixtures, explosions in tubes, heat loss 0=14110
 $O_2 + H_2 + N_2$ flames, ionization 0=19616
 $O + N$ atomic mixtures, chemiluminescence 4=29217
 O_2 and O_2 — N_2 gases, exo-electron emission by liquid Al 0=15049
 O_2 — N_2 mixtures, electron irradiation effects 0=4729
 O_2 — N_2 at 77°K, liquid, excess thermodynamic properties 1=8109
 O_2 — N_2 —Ar discharges, forbidden auroral radiation 4=18708
 O_2 — N_2 — CO_2 , phase equilibria 0=8709
 O_2 — O_2 ionization collisions meas. 3=4015
 O_2 and O_2 — N_2 discharge afterglows, free electron attachment 3=4009
 O —O and N—O interactions, Morse potl. parameters 1=7447
 O —O and O_2 — O_2 ground state interactions 0=4245
 O_2 —Xe mixtures, excitation of spectra by electron beams 0=15657
in Si, diffusion, solubility, light absorpt. and other effects 3=15579
in Si, effect on surface cond. of dried O_2 2=6459
in Si, n-type, effect on trapping 3=22935
in V targets, deuteron interactions 4=22167

Oxygen compounds

- bonds, Cl—O, P—O, Si—O, correlation between stretching freqs., force consts. and lengths 4=9697
chemical reactions in upper atmosphere, OH, HO_2 , NO_2 , O_3 with H_2 , review 4=13718
containing O—N or O—P bonds, bond nature rel. to diamag. susceptibility 4=30460
diatomic, Franck—Condon factors 3=22536
e.s.r. of OH in TiO_2 (rutile) 4=28887
free radicals, prod. by u.v. irradiation of $Cl_2 + O_2$, with trapping in solid Cl_2 0=1535
magnetic oxides, crystal growth 4=20734
metal oxides, elec. cond., effect of O vacancies, model 4=12860
metal, suspensions, non-Newtonian, turbulent transport 4=15855
oxide films on Fe, Mo, Ni and work function change 4=19076
oxide semiconductors, complex, elec. cond. and struct. 2=8370-1
oxide semiconductors, complex, elec. cond. and structure 1=19883-4
oxides; absorption, light, with exponential var., multi-phonon process 4=22835
oxides, binary, cond., ion and electron, electrochemical meas. method 4=4704
oxides, refractory, crystal growth furnace, Carc image 4=20735
ozonide production and stabilization in H_2O 4=23646
refractory oxides, crystal growth techniques 2=12893
 $A^*B_1^{3*}B_2^{5*}O_9$ ($A=Ca, Sr, Ba, Pb$ and $B=Nb, Ta$), diel. props. 2=2206
 $A^*B_1O_{15}$ ($A=Sr, Ba, Pb$), diel. props. 2=2206
 $(e^+e^-)O_2$, due to reaction of orthopositronium 0=3292
 O_2 —Ar [He, H_2] mixtures, vib. relax., acoustic resonator meas. 4=11244
 O_2 — CF_4 liquid system, phase diagram and solubility 3=21334
 O_2 — C_2H_2 , O_2 — C_2N_2 detonation in shock tube, C_2 , CN radical temps. 4=7757
OCS, i. r. spectrum 4=27314
OCS molecule, potential consts., determ. from vibr.—rot. interaction consts. 4=15352
OCS, perturbation in 003 band 2=16546
OCS, rotational mag. resonance meas. 4=22418
OCS, σ -Stark-splitting patterns, automatic recording 1=12282
 $O^{18}C^{18}S^{34}$, microwave spectrum 2=5494
OD, e.s.r., from D_2O soln., 77°K, u.v. irradiated 3=20012
OD, mol. spectrum, rotational and vibr. analysis 4=3866
OD⁺ rotational band analysis 3=12829
 OF_2 , microwave spectrum, spin—rotational hyperfine structure 3=19995
 OF_2 , microwave spectrum and structure 3=8278
 OF_2 —NO diffusion flame, emission and absorpt. spectra 4=6599
 $OF, A^2\Sigma \rightarrow X^2\Pi$ transition, oscillator strength, expt. 4=12456
OH, band spectrum in O—hydrocarbon react. 2=12961
OH, e.s.r., from H_2O soln., 77°K, u.v. irradiated 3=20012
OH, electron spectra and vibr.—rot. interact. 2=20819
OH electronic-band spectra, by exploding wire method 4=25635
OH, electronic structure 0=7774-5
OH, electronic trans., Franck—Condon factors, calc. 3=12827
OH, experimental oscillator strength $^2\Sigma^+ \rightarrow ^2\Pi$, by chemical method 4=6580
OH free radical, $\Pi_{1/2}$ levels, Zeeman effect 2=12335
OH ground state, h.f.s. consts. 4=1270
OH, interstellar, radio obs., 1612, 1720 Mc/s 4=30986
OH, mol. spectrum, rotational and vibr. analysis 4=3866
OH nightglow emission, correlation with Na 3=3511
OH, nightglow spectrum, near i.r. 4=23779
OH, OD, spectrum, $C^2\Sigma^+-X^2\Pi$, 1770-1900 Å 4=30439
OH, rotational transitions, absorption coeffs. 2=20791
OH, stabilization in ice, under γ irradiation 3=25150
OH, vibrational transition probs. calc. 3=12803
 $OH^2\Pi$ band system, and temperature measurement in shock tubes 3=7281
 $OH, ^2\Sigma \rightarrow ^2\Pi$ electronic band system, absorpt. oscillator strength from shock tube meas. 4=12457

Oxygen compounds—contd

- OH, u. v. band system, fundamental data 2=20822
 OH, vibrational excitation in H + O₃ flame, 1-3 μ emission 2=16513
 OH⁻ electron polariz. calc., ϵ var internuclear dist. 4=25651
 OH⁻ in silica, conc. rel. to F¹ centres 4=22951
 OH⁻ and H₂O⁺ recombination in flames 2=17786
 O¹⁷,¹⁸H, dipole moments, h.f.s. 3=12828
 O₂-H₂O mixtures, thermal conductivity, 300° to 1100°K 3=16655
 mX⁺⁺O.UO₃.nH₂O, general structural, formula 3=3305

Ozone

- absorption, light, Hartley band extinction coeff., as gas and in liquid N₂, CO, Ar 4=18200
 absorption profiles in far i. r., interpretation 4=28224
 absorption spectrum, pure rotational 0=17748
 in atmos., absorption of solar u.v. 0=18518
 in atmos., 9.6 μ observations 0=21323
 in atmos., power spectrum analysis 0=12145
 in atmos., at Spitzbergen and Tronsö 0=18527
 in atmos., rel. to time and atmosph. quantities 3=1428
 in atmos., vertical distribution 0=14193
 in atmosphere, meas., improved spectro-photometer 4=13781
 in atmosphere, rel. to stratospheric wind oscillations 4=23730
 in atmosphere, rel. to sunspots 3=13658
 atmospheric 2=11010, 24000
 atmospheric 3=13662
 atmospheric, attenuation of middle u.v. radiation 4=13800
 atmospheric, at Caliali 2=8952
 atmospheric conc. rel. to wind speed 1=20824
 atmospheric distrib. 4=2186
 atmospheric, distrib., from lunar eclipse photometry 1=1506
 atmospheric, distrib. rel. to solar u.v. reflection 2=4591
 atmospheric distrib. by satellite photometry 1=20812
 atmospheric, distribution 1=20814
 atmospheric, and earth mag. field vars. 4=7823
 atmospheric, formation rel. to u.v. absorption by O₂ 2=8106
 atmospheric, rel. to geomag. activity 2=2497
 atmospheric, and geomagnetic disturbance, relation 4=4757
 atmospheric, Halley Bay (Antarctica) observations 1=1497
 atmospheric, heating effects, calc., Curtis-Godson approx. 4=10699
 atmospheric, i.r. obs. 3=16207
 atmospheric, meas. by u.v. absorpt. 4=2187
 atmospheric rel. to moon 3=13661
 atmospheric, radiative transfer due to 9.6 μ band 2=2484
 atmospheric, representative vertical distrib., for transmission studies 4=23729
 atmospheric and sunspot cycle, comments on Willett 3=13659-60
 atmospheric, thickness, light scatt. data 2=11044
 atmospheric, total content rel. to stratospheric perturbations 2=4592

Ozone—contd

- atmospheric, total content rel. to sunspot cycle 2=8953
 atmospheric, upper-level, satellite sounding method 2=8954
 atmospheric, upper, meas., spectroscopic 4=10735
 atmospheric, variation and distrib. with height 3=5194
 atmospheric vertical distrib. 1=20813
 atmospheric, vertical distrib. 2=21624
 atmospheric, vertical distrib., absorption and diffusion 2=17127
 atmospheric, vertical distrib., from 9.6 μ spectral study 1=1507
 atmospheric vertical distrib., satellite meas. 4=13780
 atmospheric vertical distrib., twilight balloon photometry meas. 4=2185
 atmospheric vertical distribution 1=1504
 atmospheric vertical distribution at different latitudes 1=1505
 data tables, Kodaikanal (April-June 1961) 2=7000
 decomposition mechanism 0=18431-2
 decomposition by O₂* mols. 2=23954
 dielec. const. of liquid 0=14658
 dissociation rate, Monte Carlo calc. 2=18488
 effect on NaCl, brittleness 0=1872
 electronic structure, config. interaction calc. 3=22571
 far-u. v. spectrum 2=14284
 flames with H atoms 2=3789
 flames with H atoms, vibrational excitation of OH 2=16513
 flash photolysis, reactions of excited O and O₂ 0=8319
 liquid, miscibility with F and O 2=21904
 in mesosphere, conc. rel. to radiative equil. 4=23775
 in mesosphere, rel. to temp. changes 2=11012
 mol. structure det. from moments of inertia 3=2597
 molecular vibr.—rotation theory 4=3841
 molecule, vibr. ampl. and thermodyn. props. 4=17296
 negative ion formation 2=1391
 optical absorption, 2537-5770 Å 2=542
 ozone, analyser using radioactive clathrate 1=20779
 ozonosphere, rel. to nuclear detonation thermal flux 2=8955
 photochemical decomposition in yellow-red photochemical reactions in gas phase 2=4548
 photolysis, O₂* distrib. and relaxation 4=10648
 planets, Mars 3=18608
 production in silent discharge, surface effects 4=17860
 production and stabilization in H₂O 4=23646
 quantum mechanical tunnelling 0=17845
 radiosonde, Oxford-Kew model 1=1503
 reaction with atomic H 2=23953
 reaction with atomic N 1=7905
 reaction with atomic N 2=8909
 reaction with NO in supersonic nozzle 4=7752
 reaction with photolyzing NO 0=8315
 solar eclipse, obs. of increase in atmosph. content 2=2469
 solid, reaction products with atomic H, i.r. spectra 0=12098
 spark-produced in air, rel. to breakdown voltage 3=4100
 stratosphere—troposphere exchange and global supply 3=6953
 unimolecular decomp. 0=8302
 vertical distribution, by twilight method 1=11646

pH

 genation 3=15944
 Pd, as break contact material, transfer of matter 1=16294
 Pd cobaltite- and pyrite-type compounds, superconductivity,
 > 1°K, semiconductivity 3=21663
 Pd, containing H, elec. resistance in acidic solns. 0=236
 Pd complexes, transmission of electronic effects through
 the heavy metal atom 1=869
 Pd-dilute Fe group alloys, mag. coupling, splitting of
 d orbitals 1=9018
 Pd, electron states, X-ray spectrometric study 1=19998
 Pd-transition metals, mag. interactions 3=3078
 PdAg alloy, vacuum pump using diaphragm, heated, for
 H 3=14225
 Pd-Ag, elec. resistivity rel. to temp., composition 2=8277
 Pd-Ag solid solutions, optical consts. rel. to
 concentration 3=2991
 Pd-Ag, Gd e.s.r., rel. to mag. props. 2=12821
 Pd-Ag-Rh, ferromag. properties 1=1203
 Pd₃As, structure 1=5099
 Pd₃As₂, space gp., lattice parameters relationship to
 Ni₃Si₂, Ni₃P₂ 4=26664
 Pd-Co-H, dilute, Hall effect, contrib. from ferro- and
 paramagnetism 1=14383
 Pd-Cr, hydrogenized, magnetic props. 1=6257
 Pd, with Cu, Sn or Fe, thermoelec. power
 at low temps. 1=3796
 PdF₃, mag. props., neutron diffr. study 1=1251
 Pd-Fe alloys, atomic magnetic moment 3=15737
 Pd-Fe alloys, heat capacity, 1.4° to 100°K 4=25860
 Pd-Fe, n.m.r. of adsorbed protons 1=14827
 Pd-Fe, oxidation, 1200-1460°C 2=15140
 Pd-Fe, low temp. resistivity 3=13035
 Pd-Fe, thermoelec. power at ~1°K, rel. to
 refrigeration 2=22105
 Pd-H alloys, thermodynamic props., 30-300°K 3=12924
 Pd hexahalide complexes, electron transfer
 spectra 0=20650
 Pd hydride, nonstoichiometry and lattice
 defects 2=3898
 Pd(hydrogenated)-transition metal alloys 2=16675
 α Pd-H, elec. resist. 2=6410

Palladium compounds—contd

- Pd-H, H diffusion at room temp. 4=17444
 Pd-H, electrodes and solid solns. 2=10987
 Pd-H, Pd-D, spec. heat anomalies 2=12385
 Pd-H solutions, heat capacity and elec. resistivity 1=17418
 Pd-H system, sublimation energy determ. 2=9458
 PdH_{0.65}, thermal motion by neutron scattering 1=7532
 Pd₂H, energy evolution below 1°K 3=9665
 Pd-H soln. in constant current, anodic oxidation 3=5166
 Pd-H system, phase transformations, isotherms hysteresis 3=25750
 Pd₂H, feasibility of nuclear cooling 1=11866
 PdH and PdD, absorption spectra 4=15342
 Pd-Hg, solid solns., lattice parameters 2=4473
 PdMg, crystal structure 1=15077
 Pd_{1.1}Mg_{0.9}, crystal structure 1=15077
 Pd₂MnSb, structure, mag. props. 0=12048
 Pd₃Mn, antiphase domain structure, by neutron diffr. 3=6729
 Pd₃Mn₂, antiferromagnetism 0=13854
 Pd₃Mn₂, ζ - and μ -phases, mag. props. 4=23033
 Pd-Mo, elec. cond. anomalies 2=21093
 Pd-Ni, with adsorbed H, magnetized, single transmission effect for slow neutrons 2=6672
 Pd-Ni, film, spin wave resonance 1=14772
 PdP₂, crystal structure 4=7634
 Pd-Rh alloys, mag. suscept., low-temp. meas. 3=13229
 Pd-Rh, props. and energy-band structure 1=1441
 Pd₂S, elec. cond. 0=18001
 Pd₄S, crystal struct. 2=10880
 Pd₄Se, crystal struct. 2=10880
 Pd₄S, elec. cond. 0=18001
 Pd₄Se₁₃, crystal struct. 2=15026
 PdTe, low temp. heat capacity 1=19717
 PdTe₂, low temp. heat capacity 1=19718
 PdTe₂, and mixed crystals with Ni, Rh, Pt, supercond. 2=5241
 Pd-U, phase diagram to 25 at.%U 4=29014
 Pd-W, elec. cond. anomalies 2=21093
 Pd-W, technical alloys, hardness 2=23793

Paper

- adsorption of water, effect on microwave permittivity 4=1656
 capacitor paper, i.r. spectrochem study 0=16396
 cushioning materials, analogue computer meas. of compression 1=21153
 dielectric anisotropy, oriented fibres, 3000 Mc/s 3=22990
 electrically conducting, in thermal conductivity measurement 1=11849
 filter, liquid rise, theory and exper. 0=8336-7
 leaved blocks, dielectric anisotropy at u.h.f. 1=14540
 light scattering and pore surface, rel. to dynamic compression 4=10591
 oil impregnated, as dielectric, effect of halogen gases 0=3725
 rheological props., tensile strength 0=13918
 surface depression distrib. meas. 2=7160
 surface structure under rolling pressure 3=13553

Paramagnetic resonance and relaxation

See also Masers.

- absorption coeff. and susceptibility, minimum detectable, formulae 1=16597
 absorption curve, second moment 0=3124
 absorption, line width calc. 0=8082
 absorption lines, general form, in transverse fields 3=25134
 acenaphthene-ion, h.f.s., hyperconjugation mechanism 3=22591
 acetic acid, resonance detection by parametrically excited circuit 1=10799
 acetone, with T₂O as internal radiation source 1=15907
 acetophenone anion radicals meas. 4=12513
 acetyl-d, l-alanine, γ -irrad., double quantum transit 2=12815
 acetyl-L-glutamic acid, γ -irrad., e.s.r. 3=3164
 N-acetyl methionine, γ -irrad., free radicals 2=16550
 N-acetyl glycine, irradiated single crystal 1=2345
 acids, sulphuric, phosphoric and perchloric, at 77°K, γ -ray irrad., atomic H yield meas. 0=14137
 acoustic, nuclei in ferromag. materials 2=18949
 acoustic paramagn. resonance in S-state ions 3=2725
 acoustic, in S-state ions 2=20929

Paramagnetic resonance and relaxation—contd

- acrylonitrile and methyl acrylonitrile, γ -irrad. at 77°K, free radicals 1=14107
 activator in phosphor, effect of flux 2=6608
 adiabatic demagnetization in a rotating reference system 1=9060
 adiabatic rapid passage for 3 equispaced levels 4=10312
 adiabatic susceptibility, equivalence with isolated susceptibility 0=13733
 adsorption of O₂ on C, interaction of O₂ with free spin centres in C 4=20822
 alanine, irrad. single crystals, free radical p-d exchange reaction, e.s.r. study 4=23043
 alanine, irradiated crystal 0=3128
 α -alanine, radiation dose meas. 2=18032
 alanines, irrad. 9 kMc/s 2=14821
 alcohol free radicals in ionic crystal matrix 2=3790
 alcohol-H₂O₂ mixtures, u.v.-irrad., free radical formation 0=20662
 alkali atoms in inert-gas matrices 2=14823
 alkali atoms, meas. of g, factors 1=9914
 alkali chlorides, Mn²⁺ resonance, calc. 1=3936
 alkali halides doped with nitrates, NO₂ resonance 1=10181
 alkali halides, F-centres 2=3960
 alkali halides, F colour centre study, 20-300°K 4=4080
 alkali halides, F₂-centres 4=1529
 alkali halides, pure and doped 2=3929
 alkali halides, saturation of F-centre absorption, theory 0=16172
 alkali halides, substituted radicals 1=20315
 alkali halides, V-centres, saturation of e.s.r. 0=1827
 alkali halides, X-ray irrad., absorption by F₂⁻, Cl₂⁻, Br₂⁻, I₂⁻ 1=3840
 alkali metal graphites, conduction carriers 2=14825
 alkali metal vapour, optically oriented, spin relax. 4=14223
 alkali metals trapped in solid inert gases 4=9819
 alkaline ice, rel. to O⁻ radiolysis production 3=23233
 alkenes, straight chain, radicals formed by u.v. irrad., e.s.r. study at 77°K 4=20583
 n-alkyl disulphides, γ -irrad. 2=18480
 alkyl hydroperoxides, photodissociation study 0=8314
 alkyl radicals, anisotropic h.f.s. interactions 1=6042
 alkyl radicals in irrad. polythene 4=28276
 alkyl radicals in liq. hydrocarbons transient 4=3925
 allowed and forbidden lines, intensity 4=1866
 allyl-type free radical, oriented 2=18491
 α, α -diphenyl- β -picryl hydrazine, neutron irrad. 3=15371
 α -quartz, containing Ge, colour centres 3=22832
 alum, dispersion function, for mag. susceptibility meas. 0=8031
 aluminosilicate glasses, e.s.r. 2=10926
 amalgamation in alternant spin system 3=20640
 amethyst 4=25975
 amino acids, γ -irradiated, e.s.r. spectra, temp. depend. 3=20019
 amino acids and proteins, rel. to semiconductor theory of free electrons 1=11115
 amino acids, and radical prod. by β -rays 4=29234
 aminotroponimine chelates of Ni 0=15762
 Ampere Colloquium, Eindhoven (1962) 3=20629
 Ampere Colloquium, Leipzig (1961) 3=23198
 Ampere conference, 7th 0=19950
 amplitude modulated r.f. field, expt. theoretical analysis 2=20168
 n-amyl disulphide, γ -irrad., ionic paramag. species prod., e.s.r. study 4=20319
 analogue computation of number of spins contributing to e.s.r. absorption 1=4739
 ang. modulation of d.c. mag. field, use 3=13295
 in anisotropic solids, intensity 0=13867
 anisotropic substances, intensity rel. to line shapes 2=10693
 anomalous Faraday effect, correl. between rotation and ellipticity 4=20096
 anomalous relaxation of hyperfine components 1=6041
 anthracene, C¹³ splitting in positive and negative ions, pairing theorem 4=22385
 anthracene negative ion soln., Bloch eqns. 3=6744
 anthracite carbon, transient excitation by h.f. electron beam 1=14785
 anthracite, line splitting, in inhomog. fields 1=14786

Paramagnetic resonance and relaxation—contd

- antiferromag. materials, line-widths, rel. to strongly enhanced pseudo-dipolar moments 0=1830
 antiferromagnet, linewidth formula, uniaxial anisotropy 4=13307
 apatites, e.s.r. spectra 1=4994
 apatites, e.s.r. spectra 1=10013
 apparatus, atomic beam, for use with mass spectrometer 0=288
 apparatus, atomic beam resonance 0=15671
 apparatus, bimodal cavity 0=16161
 apparatus, frequency stabilization for reflex klystron 0=17128
 apparatus, for He³ temps. operation 2=16083
 apparatus for use at low fields 1=10795
 apparatus, low-temp. cavities 2=1611
 apparatus, magnetic spectrum analysers, 4 types 1=19047
 apparatus, mass spectrometer, for trace impurity anal. 0=14157
 apparatus, microwave bridge spectrometer 0=19952
 apparatus, microwave resonance spectrometer 0=310
 apparatus, plastic cavity 0=5434
 apparatus, sensitivity and fidelity of autodyne oscillators 0=19954
 apparatus, spectrometer 0=15177
 apparatus, spectrometer, broadband mm wave 0=9225
 apparatus, spectrometer for photochemical studies 0=8314
 apparatus, superhet. spectrometer, 9300 Mc/s 1=4735
 apparatus, transitorized autodyne detector 0=17126
 apparatus, X-band spectrometer 0=4218
 application to semiconductor surface study 1=1257
 applications, review 2=16082
 aromatic anion radicals, nitrosubstituted, hyperfine splittings 3=22593
 aromatic free radicals 1=12322
 aromatic free radicals and ions, electron spin densities 4=25723
 aromatic hydrocarbon positive ions in solids 1=19866
 aromatic mols., hyperfine coupling consts. calc. 3=17552
 aromatic mols., in triplet state, line shape, $\Delta m = 2$ transition 3=25135
 aromatic radicals, hyperfine interactions. theory 0=15680
 aromatics in boric acid glass, X-irrad. 4=13742
 arylsulphenyl radicals, g-value anisotropy 3=25137
 dl-aspartic acid, X-irrad. damage 2=14482
 asphalt solns., Overhauser effect 0=3545
 asphalt solns., relax. 2=2734
 asphaltene, Bloch eqns. sols. 3=6744
 asphaltene solns., double resonance 3=7221
 asphaltene solns., dynamic polarization 2=13353
 asymmetrical line broadening, effect on n.m.r. coupling 2=10714
 atomic level struct. studies, review 2=6081
 atomic recombination study 3=25068-9
 atoms, excited, Franck-Hertz method appl. 4=1220
 azulene anion, e.s.r. spectrum, erratum 2=8310
 azulene anion free-radicals 2=23006
 azulene anion radicals 2=23007
 azulene anion, anomalous effects 4=25724
 BDPA, mag. exchange-lattice relax. theory 2=549
 benzaldehyde anion radicals meas. 4=12513
 benzene and derivatives, phosphorescent 3=21417
 benzene, e.p.r., spin-spin interaction, correction 3=8290
 benzene, polarization, dynamic by porous paramagnetic surfaces 4=27198
 benzene, positive and negative ions, Jahn-Teller distortions 0=17768
 benzidine complexes in weak field 2=2019
 benzidine-iodine crystal complex, spectrum 4=26063
 benzonitrile, electrolytically generated neg. ion 2=19136
 benzonitrile ions, C¹³ hyperfine splitting 0=13448
 benzophenone, ions, negative radical 2=16551
 benzophenone and naphthalene in E.P.A., energy transfer 1=7502
 benzophenone derivs., phosphorescent state 2=18476
 p-benzosemiquinone ion, C¹³ h.f.s. 2=3776
 p-benzoquinone, in ethanol and methanol 1=12306
 p-benzosemiquinone, satellite lines 1=874
 benzoylpyridine ions, negative radical 2=16551

Paramagnetic resonance and relaxation—contd

- benzyl, in polycrystals, second moment calc. 3=25560
 beryl, Fe³⁺ resonance at 20 and 290°K 0=16169
 biological materials, laser irrad., free radical obs. 4=26980
 biological materials and systems 4=25722
 biphenyl⁻ ions, K h.f.s. and coupling 4=15378
 biphenyl ether, e.s.r. hyperfine structure analysis 1=10183
 biphenyl negative ion in soln., exchange effects and anisotropy broadening 1=15906
 bipyridyl radical, biquaternary, spin densities 3=2654
 biradicals, spin exchange in 0=17722
 bis-cyclopentadienyl vanadium in ferrocene 1=9058
 bis (2,2' biphenylene) methane, ions, and electronic interactions 3=15362
 1,3-bisdiphenylene-allyl, in CS₂, high resolution 2=11390
 1,3-bisdiphenylene-2-phenyl allyl, down to 1.3°K 4=4391
 1-3-bisdiphenylene-2-phenyl allyl, exchange-ordering and forbidden transitions 1=11483
 4,4'-bis (diphenylmethyl) biphenyl in solution 4=24241
 Bloch eqns. for low mag. fields, approx. soln. 3=6744
 Bloch system analogue for spin S > ½ 3=18125
 blood, flow measurement by e.s.r. 0=12217
 brucite, study of manganese impurity 1=2495
 1,3-butadiene radical anion in liq. NH₃ 4=28254
 di-t-butyl nitroxide dissolved in methylcyclohexane, line-widths, effects of hydrostatic press. 4=24242
 calcite, neutron-irradiated, e.s.r. spectra 1=1258
 calcite, neutron irrad., at 77-300°K 1=14791
 ε-caprolactam, irrad. single-crystal 4=23044
 ε-caprolactam, irradiated, splittings in spectrum rel. to crystal orientation 4=4400
 N-carbamyl glycine, irradiated crystal 2=18942
 carbazole-chloranil charge transfer complex 3=8708
 carbazole donor diphenyl acceptor mixtures, in irrad. ether-ethanol glasses, 77°K 3=22595
 carbazyl, hyperfine interactions 1=8860
 carbohydrates, charred, dynamic nuclear polariz. 2=14329
 carbon tetrafluoride, γ-irradiated at low temp. 3=12874
 carbonates, Mn²⁺ reson. 2=4260
 carbonyl anion radicals 3=6429
 carbons, formation of spin centres by oxidation 2=12816
 carboxylate hydroxy methyl radical ion (HOCHCO₂⁻) 1=2346
 cavities, high-Q rectangular, and cylindrical X- and K band, fabrication method 4=11814
 cavity resonators, quality det. 2=20173
 cavity, variable-band, for X-band spectrometer 3=9959
 cerium magnesium nitrate, low-temp. spin-lattice relaxation 1=14808
 charcoals, reson. and double reson. with n.m.r. 2=14841
 charge transfer complexes in solns., photo-dissociation 4=4706
 charge transfer effect on relaxation time 1=9061
 Chichibabin's hydrocarbon, association, e.s.r. meas. 4=12535
 chloranil-n-phenylenediamine crystal complex, spectrum 4=26063
 chlorine compounds 1=7808
 chrysoberyl [Al₂BeO₄], e.s.r. 1=20205
 chrome alums, effect of elec. field at 9.3 kMc/s, at 4-300°K 1=5071
 chrysoberyl (Al₂BeO₄), e.s.r. 2=4252
 cis- and trans-thianthrene - 5,10-dioxide, anion radicals 4=3906
 classical microscopic model, including relaxation effects 2=6687
 coal powders, oxygen effect rel. to temp. 2=4255
 coal, spin-lattice relaxation, rel. to carbonization, 300°-600°C 4=1870
 coals, oxygen effect 2=18481
 colour centres, spin-lattice relax. times 1=20242
 colour centres, spin-lattice relaxation, theory 1=20244
 complexes of aromatic hydrocarbons with iodine 1=3938
 concentration - dependence 4=26370
 conference, Jerusalem (July, 1962) 3=1177
 conference, Jerusalem (1962) 4=23040
 conference on quantum mechanics, Sanibel Island (1963) 4=6449
 conference, 10th AMPERE Colloque, Leipzig (1961) 2=1608
 Coppinger's free radical, double, electron, nuclear, in n-heptane 4=22434

Paramagnetic resonance and relaxation—contd

- coronene, $\Delta m = 1$ transitions 3=1186
 coronene, broadening due to Jahn-Teller effect 0=7798
 coronene in polymethylmethacrylate host, triplet state, effect of temp. 4=23054
 corundum, anisotropic spin-orbit coupling of d^3 and d^4 solutes 3=2694
 corundum, Co^{2+} ions 2=14824
 corundum, Co^{2+} ions 3=6745
 corundum, spin-lattice and cross-relaxation 2=6697
 corundum, spin-lattice- and cross-relaxation 3=6753
 corundum, Ti^{3+} ion spin-lattice relax. 2=6696
 corundum, Ti^{3+} ion spin-lattice relax. 3=6752
 covalency calc., effect of charge transfer levels 3=8705
 covalent crystals, and radiation effects 4=28507
 creatine, X-irrad., e.s.r. of radicals 4=13311
 crossover transitions, finite-rotation operators 1=7783
 cross-relaxation in crystals, theory 3=18142
 cross-relaxation, general theory 4=20579
 cross-relaxation, general theory, higher-order processes 4=20580-1
 cross relaxation, in mag. dilute crystals 2=4274
 cross-relaxation in spin systems, entropy calc. 0=13384
 cross-relaxation, substances of two types of paramag. centres 1=20241
 cross relaxation, substances of two types of paramag. centres 2=8667
 cross relaxation time 2=10707
 crystal ion energy levels, spin-Hamiltonian description 4=28364
 crystal mount, universal 2=1614
 crystalline free radicals 1=11473
 crystals, $A^{III}-B^I$, study of mixed covalent-ionic bonds 4=3956
 crystals, broadening, due to indirect exchange interactions 3=20638
 crystals, effect of dislocation on lineshape 3=15933
 crystals, role of electric fields 3=20639
 crystals, electron-nuclear dipolar coupling, dynamic polarization of nuclei 1=10185
 crystals, ionic, spin-lattice relax., low-temp. 3=25578
 crystals at low temp., optical detection of e.s.r. 0=4508-9
 crystals, mag. dilute, anisotropic broadening of linewidth 1=20212
 in crystals, magnetically dilute, rel. to symmetry and electric field 1=11471
 crystals, non-metallic, spin-lattice relaxation of local electron centres, theory 1=20244
 crystals, nuclear polarization, "forbidden" transition saturation 0=4506
 crystals, optical pumping 0=1829
 crystals with rare-earth ions, spin-spin interactions 1=20243
 crystals with rare-earth ions, spin-spin interactions 2=4274
 crystals, spin-orbit interact., anisotropic 4=1864
 cubic crystals, low-temp. behaviour 1=7775
 cubic crystals, Zeeman effect on Γ_a level 4=28866
 cyanogen, free-radical detect. 2=12351
 cycloheptatriene cycloheptatrienyl radical 3=4778
 cycloheptatrienyl, e.s.r. in naphthalene crystals 3=1184
 1,4-cyclohexadiene 3=12859
 cyclohexadienyl radical, h.f.s., hyperconjugation mechanism 3=22591
 cyclohexadienyl radical, spin densities meas. 2=18493
 cyclohexane, γ -irrad. at 77°K, free radicals 1=14107
 cyclohexane-1,2-dione radical anion, h.f.s. 4=30472
 cyclohexane radicals, e.s.r. spectra 0=5969
 cyclohexyl halides, γ -irrad. at 77°K, free radicals 1=14107
 cyclohexyl radical, ring inversion 4=28278
 cyclooctatetraenyl radical, h.f.s. 0=15734
 cyclopentadienyl and cyclohexenyl radicals 4=6640
 cyclopentadienyl radicals, above 800°K 4=12534
 cyclopentane radicals, e.s.r. spectra 0=5969
 cysteine, glutathione, and djenkolic acid, irradiated, S-radicals formation 2=6231
 L-cystine dihydrochloride, γ -irradiated 1=3937
 DL-serine, γ -irradiated 1=14800
 DNA bases, free-radical yields, rel. to γ -irrad. 3=22606
 DNA, irradiated, e.s.r. 4=3903
 DPANO free radical, double quantum transit. 2=4247

Paramagnetic resonance and relaxation—contd

- DPPH, coupling consts. of hydrazyl nitrogens 0=4221
 DPPH (diphenylpicrylhydrazyl), double quantum transition 1=14092
 DPPH, double mag. resonance 1=12312
 DPPH free radical, double quantum transit. 2=4247
 DPPH, g-tensor anisotropy 3=23227
 DPPH, gyromagnetic ratio apparent change in weak field 4=17311
 DPPH-hydro peroxide solutions 4=202
 DPPH, hyperfine interactions in single crystals of the hydrazine 0=13881
 DPPH, low-field meas. at low temp. 4=25727
 DPPH, mag. exchange-lattice relax., theory 2=549
 DPPH, and molecular distortion in crystalline parent hydrazine 4=28336
 DPPH, powder, rel. to appd. fld. 4=28890
 DPPH, proton hyperfine spectra 0=10680
 DPPH, r.f. susceptibility along polarizing field 0=16179
 DPPH, recrystallization effect on line width 4=26394
 DPPH, resonance line at r.f., at liq. H temps. 0=10225
 DPPH solns. 2=7232
 DPPH, spin-spin relaxation in parallel fields 1=7793
 DPPH, T_1 and T_2 exchange effects 0=3123
 DPPH, triclinic, g-tensor anisotropy meas. 2=14828
 DPPH, 2×10^{13} spins detected with new spectrometer 1=4736
 d^9 ion in octahedral environment 4=26365
 deformation effects, crystals, by spin-phonon interaction 3=18124
 deformed crystals 1=10178
 deformed crystals 1=11472
 deoxyribonucleic acid, irrad., free radicals 1=9952
 derivative form, signal distortion, rel. to measuring arrangement 3=24489
 derivatives computer programme 4=14012
 dextrose, charred 0=3310, 16159
 diamagnetic line splitting 3=23221
 diamond, e.s.r. of N donors 0=1832
 diamond, N centres, cross relaxation, four spin flip mechanism 0=10224
 diamond, rel. to neutron dose 4=7324
 diamonds, IIa, e.s.r., rel. to defects 3=6746
 diamonds, with controllable impurity concns. 2=18943
 diamonds, vacancies, investigation 3=17710
 dibenzene vanadium 2=12343
 dibenzo-ditoluene-chromium iodides, and transition, low temp. 4=17669
 dibenzo-p-dioxin, radical, e.s.r., h.f.s., p and C^{13} 3=20017
 dicarboxylic acids, and radical prod. by $t \beta$ -rays 4=29234
 2,7-dichloroanthrene, in conc. H_2SO_4 3=20013
 difference spectra recording 3=17064
 diglycolic acid monohydrate, γ -irrad. 2=6689
 dihydropyrazine cation radical, e.s.r. spectrum, isotropic hyperfine splittings, signs 4=25728
 dihydropyrazine, methyl-substituted cations, and related radicals 4=28256
 diketopiperazyl radical, spin densities from molecular orbital calcs. 4=1289
 dimesitylmethyl radical 1=12519
 dimesitylmethyl, spin densities 0=11541
 dimethylacetamide 0=11538
 2,7-dimethylthianthrene, in conc. H_2SO_4 3=20013
 dinitrobenzene anion radicals, linewidth alternation 3=4776
 o-and p-dinitrobenzene anions, e.s.r. spectra, linewidths 4=17310
 dinitrobenzene ions, isomeric, coupling consts. 0=17776
 diphenyl acceptor carbazole donor, mixtures, in irrad. ether-ethanol glasses, 77°K 3=22595
 diphenylamine free radicals 1=9951
 diphenylamine, photo-oxidation products, in frozen solutions, 77°K 4=7325
 diphenylbenzidine free radicals 1=9951
 diphenyldiazomethane, in benzophenone, solid soln., triplet state, 77°K 3=4775
 diphenyl picryl hydrazyl 0=16178
 $\alpha\alpha$ -diphenyl- β -picryl-hydrazyl, rel. to antiferromagnetism 4=4390
 diphenyl-dipicrylhydrazyl (DPPH) in benzene soln. 4=27196
 $\alpha\alpha$ -diphenyl- β -picrylhydrazyl, relax. time var. down to 1.5°K 4=30730

Paramagnetic resonance and relaxation—contd

- diphenyl-picryl-hydrazyl solns., ordinary and super-cooled glassy solid 4=2710
 1, 1-diphenyl-2-picrylhydrazyl, spin—lattice relax. 4=28884
 diphenylpicrylhydrazyl, dynamic nuclear polarization, secondary signal 1=14818
 diphenyl picryl hydrazyl, e.s.r. and n.m.r. at 40°K 0=15773
 diphenyl picryl hydrazyl, line width, effect of external mag. field, 12-33 500 Mc/s 1=1271
 diphenyl picryl hydrazyl, reson. lines, movements 0=12671
 diphenyl picryl hydrazyl, spin—spin relaxation, field depend. 1=882
 diphenylpicrylhydrazyls, substituted 4=15377
 dipolar broadening from pulse velocity in u.s. spin resonance 4=26415
 2,2'-dipyridyl anion, e.s.r., h.f.s., effect of reducing agent 3=20020
 2,2' dipyridyl-Na complex, spectrum 2=20862
 diquinone anion 4=28257
 disubstituted nitric oxides in benzene soln. 2=2733
 double modulation of mag. field, expt. and theory 2=5499
 double nitrate crystals and frozen soln., Cr³⁺ resonance 1=20206
 double quantum transit. 2=2296
 double resonance, description by spin inversion operators 2=16554
 double resonance diffusion phenomena 1=14813
 double resonance, higher-order transitions, theory 1=1275
 double resonance, incorporated atoms and F-centres 1=14815
 double resonance in solids, mechanisms, distant-ENDOR effect 1=9067
 double resonance, in solids, theory 2=23715
 double resonance, spin inversion operator, new definition 1=9954
 double resonance theory, for systems with hyperfine interaction 1=14816
 double-quantum transitions, phonon—photon, selection rules verified 1=6071
 due to defects near surface after mechanical damage 1=14787
 durosemiquinone cation, line-width alternation 2=20858
 dye photoconductors 3=23021
 dyes used in spectral sensitization of photographic materials 3=11950
 dyes, triphenylmethane 1=5072
 dynamic polarization of nuclei, and molec. diffusion 1=153
 E_i centre in irradiated fused silica, rel. to optical absorption 4=26431
 use of e.p.r. for study of microwave devices 3=14775
 e.s.r., h.f. modulation of d.c. mag. field 1=13191
 e.s.r. hyperfine structure, theory 1=13189
 e.s.r. line shape in polycrystalline substances 1=11470
 e.s.r. spectra, analogue integrator 0=2454
 e.s.r. spectrometer for wide range of temps. 1=16602
 e.s.r. spectrometers, source-frequency fluctuation compensation 1=9693
 e.s.r. spectroscopy, use of analogue computers 0=17124
 e.s.r. spectroscopy, review 2=17952
 effect on nuclear polarization time, meas. 4=23065
 egg albumin, rel. to semiconductor theory of free electrons 1=11115
 electric field effects 4=26369
 electric fields, effects, Fe group ions 3=18126
 electron delocalized in system of equiv. potl. wells, h.f.s. 3=1178
 electron—nuclear double reson., for F-centre electrons 2=14474-5
 electron—nuclear double resonance 0=10242, 13883
 electron nuclear double resonance in irradiated organic crystals 1=10184
 electron phase trajectories, calc. 1=10747
 electron spin correl., rel. to nuclear relax. 3=5046
 electronic spin system, in strong r.f. field 4=3190
 electrons, g-factor anomaly meas. 4=885
 ENDOR studies, amplitude modulation 2=7777
 energy levels for paramag. centre 1=20211
 ethane radiolysis, obs. of ethyl radical conc. 0=18439

Paramagnetic resonance and relaxation — contd

- ethanol glass, e.s.r. of irradiation-induced electrons trapped at 77°K 4=4399
 ethanol, with T₂O as internal radiation source 1=15907
 ethyl bromide, irradiation, rel. to free radical 2=8125
 N-ethylacridone, triplet states 3=962
 ethylenediamine complexes of Cu(II)SO₄, e.s.r. 4=4401
 ethylene diamine copper II nitrate 3=8706
 ethynyl free radical, in solid Ar 4=12532
 exchange narrowed lines at low and intermediate frequencies 4=26394
 excitation of n.m.r., review 4=1896
 F⁺ centre in alkali halides, elec. field gradient 4=26448
 F-centre in alkali halides, ENDOR spectrum 4=26447
 F-centre antismorph in LiF 1=20217
 F-centre concn. and relaxation time, by microwave Faraday rotation 0=16161
 F-centre electrons, spin relaxation theory 0=16160
 F-centres, absorption curve, shape calc. 3=15519
 F⁻-centres, e.s.r. 1=20222
 F-centres, e.s.r., rubidium halide crystals 0=4300
 F-centres, g-shifts due to nuc. hyperfine interact. 4=20312
 F-centres, in KCl, line width, temp. depend. 4=1527
 F-centres, in KCl, pure and bleached 2=6386
 F-centres, LCAO wave-functions from ENDOR data 2=2104
 F-centres in magnetic fields 3=17797
 F-centres, in NaCl structures, theory 0=11950
 f³ ions in a cubic site 1=9055
 Faraday effect, associated, in birefringent medium 4=26173
 ferric acetylacetonate, zero-field energy levels 3=23228
 ferrimag. materials, line-widths, rel. to strongly enhanced pseudo-dipolar moments 0=1830
 ferrites, with paramag. admixtures, spin-lattice relax. 2=8674
 ferromagnet above Curie temp., Green's function theory 3=25561
 ferromagnetic insulators, e.s.r. 0=10220
 ferromagnetic metals, conduction electron resonance 0=18212
 ferromagnets, spin-lattice relaxation process 0=13865
 first and second derivatives, sensitive recording method 3=21993
 use in flow metering 0=929
 fluids, effects of acoustic resonance 3=16706
 fluids in porous media, magnetic spin pumping 0=89
 fluorides, iron-series, hyperfine effects 3=15955
 flux-prepared phosphors, e.s.r. study of activator state 1=14636
 forbidden transitions, energy levels and probabilities 0=18214
 'forbidden' transitions, explanation 1=3928
 formyl radical 2=8124
 free electrons contributing to signal, no. det., formulae 1=16596
 free-electrons, freq. shifts by collision with polarized atoms 4=19982
 free electrons, spin mag. moment 0=16162
 free radical detection, review 1=19046
 free radical frozen solutions, dynamic nuclear polarization 4=12533
 free radical, lifetime, effect 3=8311
 free radical solutions, and mol. motion 4=24245
 free radicals, anomalous alternating linewidths 3=2653
 free radicals, anomalous relaxation of hyperfine components 0=15756
 free radicals, in benzene, triple mag. reson. 2=23011
 free radicals in dilute soln., line-widths theory 3=23911
 free radicals, double quantum transits. 2=4247
 free radicals, g-values, precise meas. and structure depend. 1=14090
 free radicals in γ-irrad. organic cpds. at 77°K 1=14107
 free radicals, h.f.s. 0=6257, 13449
 free radicals, high-sensitivity spectrometer 1=4736
 free radicals, hindered internal rotation 2=22998
 free radicals, interaction with silica gel surface 4=1321
 free radicals, isotropic hyperfine splitting, semi-empirical theory 4=9765
 free radicals, method of determining concentration 1=14110

Paramagnetic resonance and relaxation—contd

- free radicals, organic, mag. exchange-lattice relax. theory 2=549
 free radicals in petroleum, effect of dissolved O_2 1=3571
 free radicals in polymethacrylate, dependence on γ -dose 3=25563
 free radicals, prod. by γ -irrad. at $4.2^\circ K$ 2=3791
 free radicals prod. in irradiated benzene and derivatives 3=2670
 free radicals in redox polymerization 4=9786, 2243.
 free radicals, rel. to negative spin densities 4=9763
 free radicals, recrystallized, low fields 4=28279
 free radicals, relative g-factors, e.s.r. meas. 4=9764
 free radicals in solid polymer fracture products 4=1885
 free radicals, solid, spin-exchange line broadening 4=9917
 free radicals in soln. det. by inverted Overhauser effect 4=25733
 free radicals, in soln., e.s.r., and h.f.s. 3=14183
 free radicals, in soln., h.f.s. and exchange relax. 2=14321
 free radicals in solution, rel. to rotational-diffusion 4=30470
 free radicals, theory of linewidths 0=20663
 free radicals, unpaired electron spin, interaction with proton 2=14338
 frequency variation, simple method 3=14785
 in g-factor meas., compar. with cyclotron resonance 0=11923
 G-tensor asymmetry in spin Hamiltonian, conditions for 3=3163
 γ -irradiated glycylglycine 1=11485
 gas in mag. field, with different spin and orbit temp. 0=2139
 gas molecules, spin relaxation, theory, strong-collision limit 4=25740
 general account 0=4505
 glass, Cu-activated, rel. to luminescence, 800-88 m μ band 2=14720
 glass, Fe resonance 0=6373
 glass, phosphate, e.s.r. study of colour centres 1=19809
 glass, phosphate, e.s.r. study of colour centres 2=8259
 glasses, alkali borate, with high alkali oxide content, γ -irrad., e.s.r. studies 4=20582
 glasses, line-shape, calc. 2=764
 glasses, organic solns., u.v. irradi. 3=5041
 glutamic acid hydrochloride, irradiated with 50keV X-rays 1=14797
 glycine crystal, X-irradiated, e.s.r. spectra 0=499
 glycine, γ -irrad. formation of $NH_3^+-CH-CO_2^-$, radical, orientation 0=20665
 glycine, γ -irradiated, e.s.r. 1=20210
 glycine, γ -irradiated, e.s.r. hyperfine structure low-temp. variation 1=11484
 glycine, γ or X-irrad., h.f.s., temp. var. 3=18132
 glycine, 9000 Mc/s band low-temp. var. 2=12822
 glycolic acid, X-irradiated single crystal 0=20666
 glycylglycine HCl, irradiated crystals 3=15942
 graphite, charge carrier resonance 0=10240
 graphite, neutron irradi., e.s.r. rel. to temp. 4=20592
 graphite, neutron-irrad., rel. to dose 1=12558
 graphite, neutron-irradiated rel. to annealing 3=22867
 graphite, polycryst., absorption rel. to temp. 2=18940
 graphite, polycryst., theory and meas. 3=3174
 graphite, review 1=4975
 graphite, single crystals, neutron irradiated 3=13296
 graphite, spin suscept. meas. in low field 3=25501
 graphs for interpretation of hyperfine spectra 4=30071
 halide crystal colour centres, study 2=3180
 heterodyne spectrometer, with homodyne detection 3=19468
 hexa-m-phenylene radical anion 4=25731
 high-field expts, 35-70 kMc/s 3=1158
 high-field, at mm wavelengths 0=13863
 high frequency modulation arrangement 1=16598
 high-resolution 3=21987
 high resolution, elimination of proton spin-spin splitting, double resonance technique 0=17125
 hindered internal rotation effect 3=12861
 hydrated paramag. salts, spin-spin relax. 2=21381
 hydrazyl free radicals, resonance h.f.s. 1=14106
 hydrazyl, hyperfine interactions 1=8860
 hydrazyl-type radicals in viscous media 3=21418
 hydrazyl free radicals, hyperfine structure 0=20660
 hydrocarbon-quinone complexes, cryst. solids 2=8669

Paramagnetic resonance and relaxation—contd

- hydrocarbons, aromatic, in boric acid glasses, photo-ionization study 0=21290
 hydrocarbons, aromatic, phosphorescent 0=21080
 hydrocarbons, aromatic phosphorescent, two-quantum transitions 4=6641
 hydrocarbons, aromatic, zero-field splitting theory 4=3901
 hydrozyl, free radical 0=2747
 hyperfine interaction Hamiltonian 0=17698
 hyperfine interaction tensors 2=2016
 hyperfine splittings, assignment by linewidth analysis 4=28252
 hyperfine structure, direct-field effects 1=20201
 hypersound generation and amplification 2=566
 hypersound generation during e.s.r. in crystals 2=11450
 ice, atomic H resonance, $77^\circ K$, rel. to γ -irrad. 4=4715
 ice, γ -irradiated 3=2669
 ice, γ -irradiated, $77^\circ K$ 0=16168
 ice, radicals in γ -irradiated material 0=7796
 impurity centres in semiconds. 2=8665
 impurity centres in semiconductors 1=20246
 impurity ion shift in paramagnetic crystals 4=10311
 impurity ions in insulating crystals 2=3909
 indigo carmine radical, aq. soln., hyperfine structure lines 2=23010
 industrial applications 1=13190
 inhomogeneous lines, structure, study by h.f. modulation phenomena 3=21988
 interpretation, commercial unit 3=24493
 inversion of fast passage in multilevel spin system 0=18222
 ion pairs in crystal lattices, exchange coupling 2=4245
 ion pairs, spin-lattice relaxation rate 3=3167
 ion radical salts, spin correl. 2=14827
 ionic crystals, exciton spin-lattice relaxation 0=20781
 ionic crystals, overlap model calc. 1=14817
 ionic crystals, saturation eqns. 4=1865
 ionic crystals with simple cubic lattices 4=26371
 ions in cubic surroundings, g-factor anomalies due to vib. coupling 4=25826
 ions, of Fe group, in crystals, acoustic e.s.r. 2=767
 ions with spin $\frac{5}{2}$ in crystalline fields with trigonal symmetry, theory 0=13871
 ions, with spin $S=1$, $\Delta M_s = \pm 2$ transits. 2=763
 iron group and rare earth impurities in CaO 4=26405
 irradiated aromatic systems 3=15372
 irradiated DPPH protected by polystyrene 1=20228
 irradiated frozen aq. soln. of S cpds. 3=15391
 Ising model, one-dimen., temp. var. of resonance 1=20191
 isobutyric acid free radical 2=6219
 isolated spin systems, transverse mag. mom., correlation tensor 4=26376
 dl-isovaline, γ -irrad., free radical det. 2=8126
 itaconic acid, irradi., e.s.r. study of radical formed 4=1886
 Jahn-Teller effect in octahedrally coord. d^9 ions 4=28867
 kaolinite, Fe^{3+} ion 1=10180
 ketyls, rel. to coupling consts and spin densities 3=4777
 ketyls, cyclic, spin densities meas. 4=1305
 in Kramers salt, field var., Van Vleck theory verification 4=17679
 in l.f. fields, thermodynamical calculations 0=10217
 lactose, irradiated, e.s.r. spectra 0=500
 lanthanide salts, audiofrequency dispersion effects 3=23243
 lanthanon ions, in hexa-antipyrene iodides 2=4257
 least squares analysis 2=3774
 leucine, rel. to semiconductor theory of free electrons 1=11115
 ligand nuclei in transition ion complexes, hyperfine interactions 4=25718
 line broadening, by quadrupole-quadrupole interactions 4=13337
 line moments, evaluation errors 4=27668
 line-shape functions 1=12247
 line shapes in inhomogeneous fields 3=21989
 line shape of randomly oriented molecules in triplet state 4=25719
 line shape, temp. dependence 0=16156
 line shape, temp. dependence at low temp. 4=26366
 line shapes, e.s.r., modulation broadened, moments correction 4=8964

Paramagnetic resonance and relaxation—contd

line shapes of e.s.r. spectrum of interacting triplets system 4=23041
 line shapes of polycrystalline transition element ion complexes 4=26434
 line shapes in spectra of free radicals in soln. 4=28253
 line splitting, in inhomog. fields 1=14786
 line structure, "spin packet" concept 4=26368
 line-width alternation, rel. to rot. isomerism 2=20858
 line width, effect of fine and hyperfine structure, in solids 1=20199
 line width variation short-range order effect 1=20198
 line-widths in liquids 4=24240
 linewidths of radicals in solution 4=25720
 liquids, appreciable spin-orbit coupling 2=11389
 liquids, hyperfine structure, anomalous loss of resolution 0=90
 liquids, nuclear hyperfine broadening, rel. to intramolec. properties 4=30469
 liquids, relax., molecular shape effect 3=21405
 liquids, theory 2=11388
 liquids, at v.l.f. 1=12905
 local electron centres, spin-lattice relax. time 2=8195
 longitudinal relax. times, meas., new method 2=5501
 low-temp. trapped O_2 in β -quinol clathrate 1=19664
 luminescence, solids, study 4=1761
 M-centres, zero signal, rel. to mag. moment 1=19813
 $MA_6(d^1)$ -type transition metals, rel. to inversion splitting 4=10332
 mag. dipole radiation effects, relaxation time correction 0=10191
 mag. dipole reson. of excited levels of free ions 0=2715
 magnetic field meas. application 3=2080
 magnetic field meas. in e.s.r. expts. 4=30070
 use in magnetic field meas. in v. small volumes 3=25519
 magnetically dilute systems, containing Cr^{+++} , Fe^{+++} , Mn^{++} , Cu^{+++} , VO^{+++} 0=8084
 magnetometer for alternating mag. fields 2=17925
 malonic acid, X-ray irradi. 2=6892
 many-component disordered crystals, term splitting 3=22624
 maser amplification in two-level systems 0=16181
 masers, two-level, det. 2=3163
 measurement by cm waves, method 1=16601
 mercaptosuccinic acid, γ -irradiated crystal 3=13304
 metal-ammonia solns., relaxation 2=1167
 metal-ammonia solutions 1=5286
 metal chelate salts 0=4589
 metal films, spin resonance, d.c. detection 3=15934
 metalammonia solutions, relax., by microwave spin echoes 3=21414
 metals, "combined resonance" 2=23698
 metals, electron relax. time in quantized em. fields 0=9947
 metals, g-factors and spin-lattice relax. of conduction electrons 4=28868
 metals, paramag. res. of S state ions 1=6417
 metals, S -state ions, mech. 2=12821
 metals, soln. in NH_3 , e.s.r., effect of adding electrolyte 3=11811
 metals, spin-acoustic resonance 1=17403
 metals with two conduction bands, theory 1=20195
 methane, γ -irradiated at low temp. 3=12874
 methanol, γ -irrad., e.p.r. spectrum of free radicals 4=15379
 methanol, with T_2O as internal radiation source 1=15907
 methyl acrylate and methacrylate, γ -irrad. at $77^\circ K$, free radicals 1=14107
 methyl group in $CH_3C(COOH)_2$ radical 2=2299
 methylamine alum, Fe^{3+} zero-field reson. 2=770
 methylene derivatives, spin-spin interaction 3=10535
 methylene groups in free radicals, torsional oscillation study by e.s.r. 4=12531
 methylene imino free radical det. 2=12351
 methylene, spin-spin interaction 3=17602
 methylenes, substituted, C^{13} h.f.s., and struct. 4=22420
 methylformamides 0=11538
 microwave cavity, for high temp. meas. 1=12023
 microwave saturation effect, absolute capacity meas. 1=19021

Paramagnetic resonance and relaxation—contd

mixed crystals, double resonance, external field orientation depend. 1=14815
 modulation broadening of unsaturated Lorentzian lines 2=1613
 modulation of light by microwaves in paramag. crystals 1=1149
 modulation of reson., freq., side bands 2=16079
 in molecular amplification 1=19048
 molecular crystals, electron-irrad., analysis 1=20197
 in molecular crystals, excitons study 1=20194
 molecular triplet states 3=962
 molecules, deriv. of chemical bonds 3=17611
 molecules with equivalent nuclei, h.f.s. 4=1302
 molecules, hyperfine coupling const., charge density var., calc. 4=22419
 molecules with internal electron transfer 4=1303
 molecules, randomly oriented, e.s.r. of triplet states 4=28255
 molecules, randomly oriented, powder line shape 3=17612
 moment analysis of resonance signals 1=4737
 moments of resonance lines, automatic meas. 0=12671
 moments of resonance line-shapes, modulation-effect corrections 0=13866
 morpholinium⁺ tetracyanoquinodimethane 1 to 600 atm 4=28878
 multilevel spin system, spin-lattice relaxation rel. to temp. 3=3184
 multiple quantum transitions 1=17339
 naphthalene, $\Delta m = 1$ transitions 3=1186
 naphthalene, in durene, triplet state h.f.s. 1=14799
 naphthalene, effect of deuterium substitution 0=10231
 naphthalene, line broadening rel. to electron transfer processes 1=14803
 naphthalene mononegative ions, dimethyl substituted series, e.s.r. 3=12857
 naphthalene neg. ion, C^{13} hyperfine structure 1=17345
 naphthalene negative ion, spin distribution 0=11535
 naphthalene phosphores 0=21080
 naphthalene in phosphorescent state 1=6234
 naphthalene in polymethylmethacrylate host, triplet state, effect of temp. 4=23054
 naphthalene, triplet-state, electron spin distrib. and hyperfine interactions 4=23053
 naphthazarin, radical, anion, e.s.r. and H-bonds 3=17610
 new phototropic substance, e.s.r. 0=13882
 Ninth Ampere Colloquium 1=4734
 nitrenes in glass, ground-state triplet spectra 4=13326
 nitrobenzene anions, p-substituted, e.s.r. spectra, solvent effects 4=11218
 bis(p-nitrophenyl) anions, electron transfer effects, h.f.s. 3=22597
 nitro-substituted benzene anions, e.s.r. spectra, alternating linewidths 4=25729
 nonconducting single crystals, 2-particle spin-spin interactions internal elec. field effect 0=18213
 nonconductive crystals, spin diffusion, relaxation, dynamic polarization 3=15957
 non-cubic crystals, rotational props. of spectra 1=20196
 non-equilibrium spin states, statistical mech. treatment 2=14834
 nuclear mag. cooling 0=8965
 nuclear-electron double resonance at 12500 gauss 4=24244
 nuclear moments calc. from h.f.s. 3=2362
 nuclear orientation, dynamic, by forbidden transitions 0=5654-5
 nuclei in solids, dynamic polarization, rel. to temp. concentration 3=18146
 nucleic acid pseudocrystals with bound magnetic ions 4=25791
 number of paramag. centres, determination using reflection cavity 1=12028
 nylon, γ -irrad. 2=14337
 octacyanide complexes 3=725
 n-octadecyl disulphide, γ -irradiated 3=6416
 octahedral complex with single magnetic electron, spin-lattice relax. bonds rel. to covalency 4=1868
 optically driven spin precession 1=8821
 organic crystals, irrad., free radicals study 2=12485
 organic dyes, spectra 3=15936

Paramagnetic resonance and relaxation—contd

- organic free radicals, antiferromag. exchange coupling 2=12738
 organic frozen cpds., tritium as an internal radiation source 1=12307
 organic molecules in glassy solns. 4=7198
 organic molecules, photo-excited triplet states 3=1181
 organic phosphors, triplet states invest. 3=5035
 organic radicals, 2nd-order splitting 2=20860
 organic radicals in solution 0=13447
 ortho-semiquinones, spin densities meas. 4=1305
 oscillator, max. gain meas. by garnet sphere coupling 4=27670
 oscillator, review 4=16675
 oven for X-band cavity resonator for e.p.r. studies, 25-500°C 1=10801
 Overhauser effect for dipole-coupled delocalised electron-proton system 4=1897
 Overhauser effect, influence of magnetic field modulation 1=7794
 Overhauser effect, in metals and alloys, with paramag. impurities 1=1274
 Overhauser effect, review 1=3944
 Overhauser effect, in saturation of forbidden resonance 0=13886
 Overhauser effect in solns. of free radicals 2=9290
 Overhauser effect, theory 0=13883
 oxazine dye radicals 2=23008
 p-phenylene-diamine positive ion 1=6040

 Ag(II) compounds 2=1166
 $\text{Ag}^{104,104\text{m}}$ beams, h. f. s., nuclear mag. moments 1=12148
 AgBr, cyanine dye-sensitized, absorption signal, photo-induced 2=21374
 AgBr, e. s. r., rel. to photographic process 2=16933
 AgBr, g=2.04 line rel. to anti-colour centre 3=6542
 AgBr, light irradiated 0=6415
 AgBr, u. v. irradiated, detection of colloidal particles 4=26408
 AgCl:Co 3=15487-8
 AgCl, Cu⁺ doped, rel. to hole trapping and release 2=20968
 AgCl, with CuCl traces, photographic process investigation 0=19465
 Ag in KCl, on X irrad., nuclear double reson., h. f. s. 4=1889
 Al monocrystal 2=765
 Al monocrystal 3=5036
 AlCl_3 , Ti^{3+} g-factor theory 2=18947
 AlCl_3 , $6\text{H}_2\text{O}$, temp. depend. 2=23725
 AlCl_3 , $6\text{H}_2\text{O}$, Cr^{3+} resonance 1=11476
 AlCl_3 , $6\text{H}_2\text{O}$, Ti^{3+} , Cr^{3+} and Fe^{3+} resonance 0=4515
 $(\text{Al}_{1-x}\text{Cr}_x)_2\text{O}_3$, rotation fine and hyperfine struct. 2=14830
 Al-Fe alloys, rel. to low-temp. mag. props. 2=14763
 Al-Mn alloys, rel. to low-temp. mag. props. 2=14763
 Al_2O_3 absorbed water, relaxation times 1=20239
 Al_2O_3 , Cr^{3+} phonon-photon double-quantum transitions 1=6071
 Al_2O_3 :Cr, relaxation 0=18215
 Al_2O_3 , Cr^{3+} resonance, transition probability for $\alpha \epsilon^3 \epsilon \Gamma_4$ 0=11939
 Al_2O_3 (corundum), Mn^{2+} resonance 0=11942
 Al_2O_3 (corundum), Ti and Co ions, theory 1=20234
 Al_2O_3 , doped microwave u. s. spin-phonon interactions 3=23242
 Al_2O_3 :Fe, theory 0=13871
 Al_2O_3 , γ -irrad., centres meas. 4=17676
 Al_2O_3 , Gd^{3+} spectrum at 24 kMc/s, large zero-field splitting 1=7784
 Al_2O_3 , Mn^{2+} resonance, forbidden transit. 2=6600
 $\alpha\text{-Al}_2\text{O}_3$: Mn^{4+} , in ground state 2=14712
 $\alpha\text{-Al}_2\text{O}_3$, Ni^{2+} resonance 2=4263
 Al_2O_3 , resonance of Cr^{3+} excited state, optical detection 0=4508-9
 Al_2O_3 , Ti^{3+} g-factor theory 2=18947
 Al_2O_3 , V^{3+} zero-field splitting, pulsed field meas. 1=1270
 AlSb 1=17712
 Al_2SiO_5 , Cr^{3+} reson. meas. 2=21360
 Al_2SiO_5 (kyanite), Cr^{3+} resonance, maser appl. 1=11477
 Al^{3+} in ZnS, correl. with photocond. meas. 3=18128
 Ar, solid, H_2 and CH_4 impurities, irrad., energy migration and isotopic effects, e. s. r. meas. 4=25928
 $(\phi_3\text{AsCH}_3)^+(\text{TCNQ})_2^-$, spin-lattice relax. rel. to temp. 4=17684
 AsO_4^{3-} , in $\text{Na}_2\text{HAsO}_4 \cdot 7\text{H}_2\text{O}$ after X-irrad. 4=10316
 Au trapped in polar and nonpolar media at liq. N_2 temp. 4=13317
 B, rel. to C content 3=11110
 $\text{B}^{10,11}$ in alkali borate and borosilicate glasses 4=7319
 BPPA, T_1 and T_2 exchange effects 0=3123
 B in BeO single crystals, e. s. r. 4=26378
 BaF_2 , and crystal internal charge compensation by interstitial F^- 4=22460
 BaO, c. s. r. study of colour centres 0=11630
 BaTiO_3 , F^+ centre, 78°K , O non-stoichiometric 4=4404
 BaTiO_3 , paramagnetic particles 3=15935
 BaTiO_3 , tetragonal and cubic, Gd^{3+} reson. 2=18945
 $\text{BaTiO}_3 + (\text{ZrO}_2, \text{MgO})$, paramagnetic particles 3=15935

Paramagnetic resonance and relaxation—contd

- BeO, neutron irradi. 2=6688
 Bi, g-factor 0=16163
 Bi, shallow impurity traps and electron transfer dynamics at low temp. 0=18035
 Br, rel. to electronic g-factor 1=3932
 C, amorphous, line-widths, rel. to O 3=3168
 C, Faulquemont crystal, $T_1 T_2$ relax., rel. to temp., at 34.6 kMc/s 4=13314
 C, homogeneity, using spectrometer, modulated, field up to 1 Mc/s 4=748
 C, reson. and double reson. with n.m.r. 2=14841
 C, resonance lines, moments 0=12671
 C^{13} hyperfine splittings in semiquinones 1=7486
 C^{13} hyperfine splitting in semiquinones and cyclooctatetraene 1=19663
 C-Cl complex 4=20097
 Ca fluorophosphate, O^- ion in F^- site 2=23700
 $CaCO_3$ (calcite), Mn^{2+} resonance in 0=13871
 $CaCO_3$ (calcite), neutron irradi., stimulated spin-echo meas. of cross-relaxation 1=7792
 CaF_2 , Co^{2+} resonance, spin Hamiltonian 1=3934
 CaF_2 , and crystal internal charge compensation by interstitial F^- 4=22460
 CaF_2 , detection of hydrolysis in solid 1=11478
 CaF_2 , doped, microwave u.s. spin-phonon interactions 3=23242
 CaF_2 , Dy^{3+} resonance 1=3933
 CaF_2 , e.s.r. of point defects, charge compensation invest. 2=4249
 CaF_2 , Eu-doped, e.s.r. absorption of 9.3 kMc/s phonons 3=1190
 CaF_2 impurities 0=6267, 11937
 CaF_2 , impurity spectra, theory of satellite lines 0=8088
 CaF_2 with impurity valence changes 3=1180
 CaF_2 , Nd^{3+} and U^{3+} paramag. resonance at $20^\circ K$ 1=9055
 CaF_2 with rare earth impurities, effect of heat treatment 1=1259
 CaF_2 , rare earth ion spectra 3=3172
 CaF_2 , rare-earth ions 2=10696
 CaF_2 , self-trapped hole 2=16632
 CaF_2 , Tb^{3+} reson., meas. and theory 2=12817
 CaF_2 , trigonal site 2=16812
 CaF_2 , trivalent rare-earth ions, crystal-field splittings 4=20585
 CaF_2 , trivalent rare-earth ions, spin-lattice relax. 4=20586
 CaF_2 , U^{4+} reson. rel. to optical spectra 2=23708
 CaF_2 , Yb^{3+} resonance at $20^\circ K$ 0=11938
 CaF_2 :H 4=13319
 CaF_2 :Ho, resonance, rel. to impurity ion behaviour 3=8710
 CaF_2 :Mn, fine structure 1=1260
 CaF_2 :Tm, X-irradiated, down to $20^\circ K$ 1=20203
 CaF_2 :Yb, X-irradiated 1=20203
 $CaMg(CO_3)_2$, Mn^{2+} resonance 1=18714
 CaO, defect centres due to X or Hg irradi. 4=7320
 CaO, Fe^{3+} and Mn^{2+} 2=21362
 CaO, Gd^{3+} and Eu^{2+} , 290° , $77^\circ 4.2^\circ K$ 2=21363
 CaO, after neutron irradi. 3=13169
 $CaWO_4$, impurity resonance of Mn^{2+} and Gd^{3+} S-state ions 0=10221
 $CaWO_4$, irradiated single crystals 1=3655
 $CaWO_4$ with Mn^{2+} , Fe^{3+} , Nd^{3+} , determ. of ion sites 4=4409
 $CaWO_4$, Tb^{3+} reson., meas. and theory 2=12817
 Cd chromites, linewidths and g-factors 1=20189
 Cd, double, 5^3p , level, light modulation at r.f. 4=9639
 Cd ferrites, linewidths and g-factors 1=20189
 $CdBr_2$, Co^{2+} impurity at 9300 Mc/s below $40^\circ K$ 1=20202
 $CdCl_2$, Co^{2+} impurity at 9300 Mc/s below $40^\circ K$ 1=20202
 $CdCl_2$, Mn^{2+} reson. 2=772
 CdF_2 , Mn^{2+} reson. 2=772
 Cd in GaAs 4=7338
 CdS, photosensitive Fe^{3+} centre, theory 0=13871
 CdS:Cu, Ga, photosensitive centre 3=23224
 CdS:Eu(II), crystal field splittings of 8S state 0=21071
 CdS:Mn, at 4.2 and $300^\circ K$ 0=13872
 CdSe: Mn, 3a field splittings 3=1192
 CdTe, Co^{2+} resonance, spin Hamiltonian 1=3934
 CdTe:Mn, at 4.2 and $300^\circ K$ 0=13872
 CdTe, Mn^{2+} reson. 2=772
 Ce glass, u.v. irradiated 1=14349

Paramagnetic resonance and relaxation—contd

- Ce^{3+} in dil. LaMg nitrate, spin-lattice relaxation time rel. to echo formation 3=1195
 Ce^{3+} in $CaWO_4$ 4=23058
 Ce^{3+} in $CeCl_3 \cdot 7H_2O$, relax., 1.1° - $4.2^\circ K$, dispersion-absorption meas. 4=26379
 Ce^{3+} in $CeCl_3 \cdot 7H_2O$, spin-lattice and cross-relax. 4=26380
 $CeCl_3 \cdot 7H_2O$, liquid He temps. 3=8718
 $CeCl_3 \cdot 7H_2O$, susceptibility meas., 2 Kramers doublets 4=20587
 $(Ce, La)_2Mg_3(NO_3)_{12} \cdot 24H_2O$, dynamic polarization of protons 1=10185
 CeMg nitrate, Ce^{3+} spin-lattice relaxation 1=6423
 CeMg nitrate, rel. to crystal field splittings 4=26381
 CeMg nitrate, spin-lattice relax. 2=14836
 CeMg nitrate, spin-lattice relaxation, 1.64 - $2.12^\circ K$ 1=12566
 $Ce_2Zn(NO_3)_6 \cdot 24H_2O$, mag. interaction between Co^{2+} and Ce^{3+} ions 1=6260
 Ce^{3+} in $CaWO_4$, inhomog. resonance lines 1=14792
 Ce^{3+} and Nd^{3+} in $La_2Mg_3(NO_3)_{12} \cdot 24H_2O$, spin-lattice relax. below $1^\circ K$ 2=14839
 CH π -electron radical, e.s.r. line shape 1=17341
 CH radical in crystal, line shape 1=3939
 CH radical in polycrystalline state, e.s.r. 1=11116
 $CH(COOH)_2$, C^{13} hyperfine splitting 0=5968
 $CH(OOH)_2$ in malonic acid, X-irradiated 0=13571
 $CH(SO_3)_2$ free radical, e.s.r. in K methane disulphonate 2=16566
 CH_3 radical, C^{13} splittings 0=503
 Cl, atomic, microwave Zeeman spectrum 1=11068
 Cl, rel. to electronic g-factor 1=3932
 $Cl^{35,37}$ atoms, two-quantum transits. 2=22903
 Cl-C complex and electronic struct. 4=25725
 Cl_2^- in NH_4OHCl , irradi. 4=28869
 Cm^{3+} in $LaCl_3$ and La ethylsulphate 3=13299
 $Co(NH_3)_4Al(SO_4)_2 \cdot 6H_2O$ and isomorphous cpds. 1=12573
 Co ion in X site of $La_2Zn_3(NO_3)_{12} \cdot 24H_2O$, relax. 3=8723
 Co salts, at liq. He temps. 0=6261, 10222, 10218
 Co salts, spin-lattice relaxations of paramag. dispersion 3=23241
 Co^{2+} in Al_2O_3 (corundum) 1=20237
 $Co(NH_3)_4(SO_4)_2 \cdot 6H_2O$ spin-spin relaxation time 0=1831
 Co^{2+} in Al_2O_3 (corundum) 2=4251
 Co^{2+} in CaF_2 , CdF_2 and $CdTe$ 0=16164
 Co^{2+} in CaO rel. to MgO, CaF_2 3=3181
 Co^{2+} in CdS 4=10317
 Co^{3+} in corundum, cross spin relaxation 1=3940
 Co^{2+} in corundum, spin-lattice relaxation 0=21074
 Co^{2+} in MgO, double reson. 2=4278
 Co^{2+} , spin Hamiltonian, resonance in CaF_2 , ZnS, CdTe, ZnSe 1=3934
 Co^{2+} in TiO_2 4=26382
 Co^{2+} in TiO_2 (rutile) 3=1183
 Co^{2+} in TiO_2 (rutile) single crystal 2=8668
 Co^{60} , dynamic orientation in a crystal of $La_2Mg_3(NO_3)_{12} \cdot 24D_2O$ 0=5655
 Co-Au alloys, resistive anomalies 1=20213
 $CoCl_2 \cdot 6H_2O$, 55 kMc/s, $4.2^\circ K$ 1=1256
 $Co(Cs)_2(SO_4)_2 \cdot 6H_2O$, low temp. var. 4=17677
 Co-Cu alloys, resistive anomalies 1=20213
 $Co(NH_3)_4(SO_4)_2 \cdot 6H_2O$, low temp. var. 4=17677
 $CoNH_4$ -Tutton, single crystals, at liq. He temp. 0=10214
 $CoNH_4$ Tutton salt, spin-lattice power transfer parameter 1=9066
 CO_2^- radical, trapped 3=6418
 Cr, in corundum and Cr alum, spin-lattice relaxation 0=16158
 Cr ion in chrome alum, fine structure 1=6415
 Cr ion pairs in ruby, exchange interactions 3=3167
 Cr ion pairs, in ruby, spin-lattice relaxation 1=14812
 Cr ions adsorbed by exchange of ions 3=8707
 Cr ions, electric fields, effects 3=18126
 Cr ions in ruby, spin-lattice relax. 2=4275
 Cr oxychlorides, fluorides, sulphates, and mol. struct., bonding 4=20098
 Cr in ruby, lineshapes, statistical theory 4=26388
 Cr, in ruby, spin-lattice relax., concn. and temp. depend. 4=13313
 Cr(III) in $Co(NH_3)_6I_3$ cubic field, rel. to spin Hamiltonian 4=20588

Paramagnetic resonance and relaxation—contd

- Cr III complexes in aq. soln., study 4=201
 Cr³⁺ salt solns. 3=3818
 Cr³⁺, 3d⁵ config., in ZnSe and ZnTe 4=13312
 Cr³⁺, in alum, fine structure, ground-state splittings 0=21073
 Cr³⁺, in corundum, cross relax. 2=4274, 10707
 Cr³⁺, in corundum, resonance, line width and profile 0=11941
 Cr³⁺, in corundum, spin-lattice relax. time, 4-90°K 2=776
 Cr³⁺, in corundum, spin-lattice relax. time, 4-90°K 3=5037
 Cr³⁺, in cubic SrTiO₃, temp. and press. depend. 4=10325
 Cr³⁺, e.p.r. spectrum at low and room temp. 3=25567
 Cr³⁺ ion, charge transfer and spin-Hamiltonian 1=9052
 Cr³⁺ ion in spinel 3=3171
 Cr³⁺ ions in double nitrate crystals and frozen soln. 1=20206
 Cr³⁺ ions, effect of charge transfer levels 3=8705
 Cr³⁺, in K₃Co(CN)₆ and rubidium alum, broadening of lines due to dipolar interaction 4=15670
 Cr³⁺, in MgWO₄, 3=15939
 Cr³⁺ in ruby, electric shift 4=26384
 Cr³⁺ in ruby, line splitting by external elec. field 4=26387
 Cr³⁺ in ruby, second moment of lines 4=7321
 Cr³⁺, in ruby, spin-lattice relax. time, 9kMc/s 3=13298
 Cr³⁺ in rutile 4=23057
 Cr³⁺, in rutile monocystals, relax. times 2=18941
 Cr³⁺ salt solns. 2=5028
 Cr³⁺, in SnO₂, spin Hamiltonian 3=20645
 Cr³⁺, spin-lattice relax. in corundum 0=11940
 Cr³⁺, spin-lattice relax. in ruby, calc. 4=10320
 Cr³⁺, spin-lattice relax. time, in K₃(Fe,Cr)(CN)₆ 1=14810
 Cr³⁺, in TiO₂ 3=14798
 Cr³⁺, in ZnWO₄, meas. and theory 3=3169
 Cr³⁺, in ZnWO₄, spin-lattice relaxation 3=25569
 Cr³⁺ in glasses, 260-9320 Mc/s, 77°-295°K 3=18129
 Cr³⁺, in glycerol or water 3=7219
 Cr⁶⁺ in tetrahedral, octahedral and dodecahedral coordination, spin-lattice relaxation 3=13311
 Cr³⁺ in Al₂O₃, absorpt. line depend. on Cr conc. 4=26385
 Cr³⁺ in Al₂O₃, excited E^{(2)E} state 3=23225
 Cr³⁺ in Al₂O₃, linear elec. shifts 3=25568
 Cr³⁺ in Al₂O₃, matrix elements, calc. 3=3165
 Cr⁴⁺ in α-Al₂O₃, meas. 4=7322
 Cr⁵³ in Al₂O₃, electron-nuclear resonance 1=11490
 Cr³⁺ in Al₂SiO₅ (kyanite) 4=13309
 CrBr₃ line widths 3=23204
 Cr(CN)₃NO³⁻, (Cr⁶⁺), C¹³ h.f.s. and lines 3=20014-15
 [Cr(C¹³N)₅NO]³⁺, two h.f. splitting consts. 4=12512
 Cr³⁺ in CaO rel. to MgO, CaF₂ 3=3181
 Cr in CdS 4=26389
 Cr³⁺ in CdS, 1.4°K 3=23226
 Cr²⁺ in CdS single crystals 4=15669
 Cr in CdTe 3=20646
 CrCl₃, e. s. r. 4=10315
 CrCl₃, g-factor anisotropy, room temp., 36 kMc/s 0=21072
 CrCl₃ in LiCl-KCl, e. s. r. 4=10315
 CrCl₃ line widths 3=23204
 CrCl₃ in ZnCl₂, e. s. r. 4=10315
 CrF₆³⁻ in diamagnetic solids 1=20207
 Cr³⁺ and Gd³⁺ in LaAlO₃, 4°-700°K 4=26386
 Cr(H₂O)₆³⁺, in Al(H₂O)₆Cl₃ 0=13869
 CrK alum, relaxation at low temp. 1=14793
 Cr in K₂CrO₄ and K₃NbO₈-K₂CrO₄ 3=3166
 CrK(SO₄)₂·12H₂O 2=21381
 CrK(SO₄)₂·12H₂O, saturation 0=10223
 Cr³⁺ in K₂Zn(SO₄)₂·6H₂O 3=18130
 Cr³⁺ in MgO, linear elec. shifts 3=25568
 Cr³⁺, in MgTiO₃, 24 and 35 kMc/s 3=15938
 Cr³⁺, Mn⁴⁺, Co³⁺ in SrTiO₃ 4=26383
 Cr⁰, Mn²⁺, Fe³⁺ in ZnS 3=20648
 Cr⁰ and Mn²⁺ in Si, rel. to electric dipole induction 4=1863
 [Cr(NH₃)₆]Cl₃ crystals, diluted with [Co(NH₃)₆]Cl₃, 9.2 kMc/s 3=1182
 (Cr,Ne)₂O₃ mixed crystals, α-phase 4=1871
 Cr₂O₃, below Curie temp., 15 times reduction by heating at 1000°K 3=20643
 Cr₂O₃ on Al₂O₃ 3=13297
 Cr₂O₃-Al₂O₃ mixtures, antiferromagnetism 4=26350

Paramagnetic resonance and relaxation—contd

- Cr²⁺ in TiO₂, external stress effects 4=26435
 Cr⁵³, in Co(III) acetylacetonate and Al acetylacetonate 4=13338
 Cr³⁺ in ZnS, cubic and hexagonal 3=3170
 Cr³⁺ in ZnS, rel. to ion charge transfer 4=1357
 Cs, D level hyperfine structure 1=17260
 Cs, optically driven spin precession 1=8821
 Cs, soln. in NH₃, e. s. r., effect of adding CsI 3=11811
 Cs¹³³ vapour, optically aligned, fine structure 4=6471
 Cs¹³³ vapour, spin-exchange collisions meas. 4=25591
 CsBr, interaction energy 1=14817
 CsCl, electron irradi., unidentified centre 2=4253
 Cs-Cr alum, Cr relax., saturation effects 2=10697
 CsO₂, exchange effects 0=4522
 Cs and Rb in methylamine, hyperfine splitting 3=16640
 (Cs⁺)₂(TCNQ)₂²⁻ 2=14827
 (Cs⁺)₂(TCNQ)₃²⁻, spin-lattice relax. rel. to temp. 4=17684
 CsTi alum, Ti³⁺ g-factor theory 2=18947
 Cs₂ZrCl₆, resonance h.f.s. of tetravalent Pa²³¹⁺ 1=6420
 Cu benzoate, line width temp. var. 4=10318
 Cu chelates, N bonded 4=30471
 Cu complexes 2=16549

 Cu²⁺, complexes, influence of Jahn-Teller effect 0=11943
 Cu²⁺, in CuCl₂·2H₂O, g factors, meas. and calc. 4=3958
 Cu²⁺, in Cu(NH₄)₂Cl₄·2H₂O 4=20589
 Cu²⁺ ion in tetrahedral crystal field 2=4254
 Cu²⁺ in K₂Cu(SO₄)₂, temp. depend. meas. 4=13328
 Cu²⁺ and Ni²⁺ in CaO, Jahn-Teller effect 4=13327
 Cu²⁺, octahedral complexes, spin inversion levels 3=25570
 Cu²⁺ in organic complexes, spin-lattice relaxation, temp. var. 4=12613
 Cu²⁺ spectra, distortion in tetrahedral crystal field 4=12571
 Cu²⁺ in TiO₂ 3=25564
 Cu²⁺, in water and glycerine, 90° and 300°K 0=16714
 Cu²⁺ in ZnO as substit. impurity 4=4042
 Cu²⁺ in Zn₃P₂O₇, e. s. r. spectrum, phase transition study 4=26574
 Cu³⁺, in corundum 3=13300
 Cu³⁺ in Al₂O₃ 4=26393
 Cu⁶⁴, in divalent Cu cpds, use in masers 0=2436
 (CuCl₂)⁺, rel. to electron distrib. 2=6248
 Cu_{0.96}Co_{0.04}K₂(SO₄)₂·6H₂O, at room temp. and 77°K 0=4510
 CuCs₂(SO₄)₂·6H₂O 2=4273
 CuCs₂(SO₄)₂·6H₂O, low temp. var. 4=23045
 CuF₃·5HF·5H₂O, 9625 Mc/s meas. 3=5038
 CuF₂·2H₂O 2=12808
 CuK Tutton salt, spin-lattice power transfer parameter 1=9066
 CuK₂Cl₄·2H₂O, relaxation at low temp. 1=14793
 CuK₂Cl₄·2H₂O, spin-lattice power transfer parameter 1=9066
 CuK₂(SO₄)₂·6H₂O 4=19247
 CuK₂(SO₄)₂·6H₂O, low temp. var. 4=23045
 CuK₂(SO₄)₂·6H₂O, saturation 0=10223
 Cu-Mn alloy, s-d interaction, theory 0=16166
 Cu(NH₃)₄Cl₄·2H₂O, crystal structure meas. 4=10319
 Cu(NH₃)₄Cl₄·2H₂O, spin-lattice power transfer parameter 1=9066
 Cu(NH₃)₄SO₄·H₂O 2=10694
 Cu(NH₃)₂(SO₄)₂·6H₂O 2=4273
 Cu(NH₃)₂(SO₄)₂·6H₂O, low temp. var. 4=23045
 Cu(NH₃)₂(SO₄)₂·6H₂O, size dependent relaxation times at liquid He temp. 1=14675

Paramagnetic resonance and relaxation—contd

- CuNH_4 , Tutton salt, spin-lattice power transfer parameter 1=9066
 $\text{Cu}(\text{NO}_3)_2$, anhydrous, organic solns. 4=11216
 CuSO_4 , spin-lattice relax., rel. to nonresonant sound absorption 4=9840
 $\text{CuSO}_4 \cdot 4\text{NH}_3 \cdot \text{H}_2\text{O}$ low-temp. anomalies 1=10179
 $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$, exchange amalgamation 3=20640
 $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$, Faraday effect, anomalous in e.s.r. absorpt. region 4=28870
 $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$, orientation depend. 1=1261
 $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$, paramag. ions coexisting within ordered spin system 3=20644
 $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$, spin-lattice power transfer parameter 1=9066
 $\text{Cu}_{0.08}\text{Zn}_{0.92}\text{K}_2(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$, at room temp. and 77°K 0=4510
 D , atomic, h.f.s. det. 0=20543
 D_2 , solid, unpaired atoms, rel. to lattice sites 4=4402
 DCrO 1=11413
 DO_2 , from D_2O_2 soln., 77°K, u.v. irradiated 3=20012
 D_2O_2 , polycrystals, resonance line shape 2=2297
 D_2O_2 in D_2O 1=17363
 Dy ethyl sulphate, spin-lattice relaxation 3=1194
 Dy^{2+} , in CaF_2 , spectra, study at liq. He temp. 4=28871
 Dy^{3+} , in CaF_2 , cubic and axial fields 4=1873
 Dy^{3+} , in CaO , covalent bonding evidence 3=25576
 Dy^{3+} , in Y ethylsulphate, spin-lattice relax. 4=7326
 Dy^{3+} in CaF_2 , separation of Γ_8 - Γ_7 levels 4=20590
 $\text{DyCl}_3 \cdot 6\text{H}_2\text{O}$, 1.1-4.2°K, 2-2660 c/s 3=8719
 $\text{DyCl}_3 \cdot 6\text{H}_2\text{O}$, spin-lattice relax. 1.1° to 4.2°K 3=3183
 Dy^{3+} in YGa garnet lines 3=15937
 Er^{3+} , in CaO , covalent bonding evidence 3=25576
 Er^{3+} , in CdF_2 monocrystals 2=18944
 Er^{3+} in CaF_2 , five spectra 4=4403
 Er^{3+} in CaWO_4 , inhomog. resonance lines 1=14792
 Er^{3+} in CdF_2 , BaF_2 , CaF_2 , spin-lattice relax., 1.6-25°K 4=30732
 $\text{ErCl}_3 \cdot 6\text{H}_2\text{O}$, 1.1-4.2°K, 2-2660 c/s 3=8719
 $\text{ErCl}_3 \cdot 6\text{H}_2\text{O}$, spin-lattice relax. 1.1° to 4.2°K 3=3183
 Er^{3+} in MgO , 20°K 4=13316
 Eu , divalence proved 0=13874
 Eu^{2+} in alkali earth fluorides, cubic field splitting 4=1875
 Eu^{2+} , in cubic SrTiO_3 , temp. and press. depend. 4=10325
 Eu^{2+} , in CaF_2 , electron-nuclear double reson. 2=10715
 Eu^{2+} , S-state, relaxation time 1=3927
 Eu^{3+} , in Nd ethyl sulphate, quadrupole h.f.s. 3=3173
 EuAl_2 , conduction electron polarization 1=1277
 Eu^{2+} in BaF_2 and SrF_2 4=1874
 Eu^{2+} in CaF_2 , electron-nuclear double resonance 4=26449
 Eu^{2+} in CaO , SrO , exchange interactions 4=13315
 Eu^{2+} in CdSe and CdTe , rel. to covalent bonding 4=10321
 EuIr_2 , no resonance detected 0=13874
 EuO , 23.8 and 27.5 Gc/s, 1.5° to 300°K 4=26358
 F , atomic, microwave Zeeman spectrum 1=11067
 F , in CaF_2 , ENDOR rel. to interact. with Eu^{2+} 4=4425
 F^{2-} in BeO powder, X-irrad. 4=26396
 F^{19} hyperfine interaction in irradiated organic crystals 4=26395
 F^{19} in irradiated pentafluoropropionamide crystals 4=26395
 F^{19} in irradiated trifluoroacetamide crystals 4=26395
 F^{19} in XeF_6 -HF, liquid, anomaly 4=21157
 Fe complexes with Fe at centre of 4 N square, review 1=873
 Fe , above Curie pt., theory of large linewidth 2=4259
 Fe , in Fe oxide glasses 4=2137
 Fe , in GaAs, meas. at 77°K 3=11113
 Fe , GaAs, quasiforbidden transitions 4=1879
 Fe -group ions in fluoride cryst., bonding 3=20043
 Fe -group ions in fluoride crystals, bonding study 3=15407
 Fe group ions in tetrahedral coordination 4=25903
 Fe group, salt solutions, resonance and relaxations 0=8085
 Fe , Ni and V, in ZnS , photoexcitation 4=13323
 Fe relax. in $\text{K}_3\text{Co}(\text{CN})_6$, freqn. depend. 3=25572
 Fe , trivalent, in calcite single crystal 4=1878
 Fe^{2+} , in cubic field, theory and expts. 0=10228-9
 Fe^{2+} , in MgO , u.s. velocity near resonant absorption, by u.s. e.s.r. 3=6759
 Fe^{3+} , ground-level splitting and g-factor in nearly cubic crystal field, calc. 0=11601

Paramagnetic resonance and relaxation—contd

- Fe^{3+} , ground-state cubic crystal field splitting parameter, sign 0=1824
 Fe^{3+} , in Al_2O_3 , 2-80°K, 3 cm 3=20649
 Fe^{3+} , in anatase 2=12818
 Fe^{3+} , in andalusite, and isomorphism 3=20855
 Fe^{3+} in calcite 3=15940
 Fe^{3+} , in CdWO_4 , and spin Hamiltonian 3=5040
 Fe^{3+} , in corundum, temp. depend. 2=768
 Fe^{3+} , in corundum, temp. depend. 3=5039
 Fe^{3+} , in cubic SrTiO_3 , temp. and press. depend. 4=10325
 Fe^{3+} , in Fe-Rb alum, rutile and $\text{K}_3\text{Co}(\text{CN})_6$ 4=20594
 Fe^{3+} in guanidinium Al sulphate hexahydrate 3=6747
 Fe^{3+} ions in MgAl_2O_4 and ZnAl_2O_4 , exchange interaction and field splitting parameter 1=1481
 Fe^{3+} , in MgO , acoustic e.s.r. 4=1867
 Fe^{3+} , in natural MgAl_2O_4 , at room temp. 3=25571
 Fe^{3+} , parameter D, rel. to axial crystal field 3=8336
 Fe^{3+} , PbTiO_3 , strong axial field, meas. 3=20595
 Fe^{3+} , in rutile, c.w. push-pull maser 2=1583
 Fe^{3+} , in rutile monocrystals, relax. times 2=18941
 Fe^{3+} , S-state, relaxation time 1=3927
 Fe^{3+} , in sapphire, spin-Hamiltonian description, exactness 2=8670
 Fe^{3+} , spin-lattice relax. time in $\text{K}_3(\text{Fe}, \text{Cr})(\text{CN})_6$ 1=14810
 Fe^{3+} , in spinel lattices, linewidth rel. to Fe^{3+} conc. 2=769
 Fe^{3+} , in ZnWO_4 , spin-lattice relaxation 3=25569
 Fe^{3+} in AgCl 4=13324
 Fe^{3+} in Al ammonium sulphate 4=13321
 Fe^{3+} in Al_2O_3 , transition matrix elements, calc. 3=23230
 Fe -Au alloys, resistive anomalies 1=20213
 Fe^{2+} in BaTiO_3 , near Curie point, var. with d.c. bias field, and phase transformation 4=10324
 Fe^{3+} in BaTiO_3 , low temp. 4=7329
 Fe^{3+} in CaCO_3 , isotopic shift in h.f.s. 4=13322
 Fe^{2+} in CaO 4=17678
 Fe^{3+} in CaO rel. to MgO , CaF_2 3=3181
 FeCl_3 , e.s.r. 4=10315
 FeCl_3 in LiCl - KCl , e.s.r. 4=10315
 Fe -Cu alloys, resistive anomalies 1=20213
 Fe^0 and Fe^+ in interstitial Si 1=20214-15
 Fe^{3+} in $\text{K}_3\text{Co}(\text{CN})_6$, relaxation from 0.1° to 4.2°K 4=26407
 Fe^{3+} in $\text{K}_3(\text{Co}, \text{Fe})(\text{CN})_6$, spin-lattice relaxation 4=10323
 Fe^{3+} in LaAlO_3 4=23074
 Fe^{3+} , in Li aluminate, internal elec. field 2=12645
 Fe^{3+} in $\text{Li}_{0.5}\text{Al}_{2.5}\text{O}_4$ and $\text{Li}_{0.5}\text{Ga}_{2.5}\text{O}_4$ 4=26404
 Fe^{3+} in MgAl_2O_4 , spinel 3=8711
 Fe^{3+} in MgO , rel. to axial cryst. field 3=2695
 Fe^{2+} in MgO , $\Delta M = 2$ lineshapes model 4=13320
 Fe^{2+} in MgO , stress effects 4=30736
 Fe^{2+} in MgO , virtual phonon effects 4=23046
 Fe^{3+} and Mn^{2+} in $\alpha\text{-Al}_2\text{O}_3$, appd elec. fld effect 4=26406
 $\text{FeNH}_4(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$ 2=21381
 $\text{Fe}(\text{NH}_4)(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$, line-widths, g-factor 3=25565
 $\text{Fe}(\text{NH}_4)(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$, at 9.3×10^9 c/s 0=3130
 $\text{Fe}(\text{NH}_4)(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$, resonance in parallel fields 0=13875
 $\text{Fe}(\text{NO}_3)_3 \cdot 9\text{H}_2\text{O}$, at 9.3×10^9 c/s 0=3130
 $(\text{FeO})^{2-}$, in K_2CrO_4 0=20169-70
 Fe^{3+} in SrTiO_3 , axial, due to nearest-neighbour charge compensation 4=23047
 Fe^{3+} in Y orthoaluminate 4=30733
 Fe^{3+} in ZnS , rel. to ion charge transfer 4=1357
 Fe^{3+} in ZnWO_4 4=30734
 Fr^{2+} and Ni^{2+} in MgO , microwave u.s. pulse interaction 4=26415
 Ga^{3+} , in fluorides 0=10226
 Ga^{3+} in LaAlO_3 3=11112
 GaAs , centres, obs., in high concentrations 3=20647
 GaAs , n-type, 4.2°K 4=4406
 GaAs , of Zn, Cd 4=7338
 GaSb 1=17712
 Gd , in alloys and intermetallic cpds., rel. to theory 2=12821
 Gd ethylsulphate, spin-lattice relax. 2=18950
 Gd , g-shift, rel. to f-cond. electron coupling 3=8450
 Gd , resonance in Pd and Pd-rich alloys, effect of hydrogenation 3=15944
 Gd^{3+} , in alkali earth fluorides, cubic field splitting 4=1875
 Gd^{3+} , in CaF_2 0=18216
 Gd^{3+} , in CaF_2 4=1876, 7327
 Gd^{3+} , in CaF_2 , h.f.s. of resonance spectrum 3=15943
 Gd^{3+} , in CaF_2 , relaxation meas. 4=7328

Paramagnetic resonance and relaxation—contd

Gd³⁺, in CaF₂, SrF₂ and BaF₂ 4=4407
 Gd³⁺, in CdF₂ 2=4256
 Gd³⁺, in cubic SrTiO₃, temp. and press. depend. 4=10325
 Gd³⁺, in cubic and tetragonal BaTiO₃ and SrTiO₃ 2=18945
 Gd³⁺ in fluorite, resonance at 9190 Mc/s 1=14796
 Gd³⁺ in garnet, rel. to GdIG anisotropy 4=26398
 Gd³⁺, in Gd hexa-antipyrene iodide 2=4256
 Gd³⁺, in glasses 3=20651
 Gd³⁺, in La hexa-antipyrene iodide 2=4256
 Gd³⁺, in metals and cpds. of high susceptibility 4=28873
 Gd³⁺, Pr³⁺ in LaAlO₃ 4=26383
 Gd³⁺, resonance in LaF₃ 0=6263
 Gd³⁺, S-state, relaxation time 1=3927
 Gd³⁺, in Y, Sm and Nd sulphates 2=10698
 Gd³⁺ in zircon 4=15673
 GdAl₃, conduction electron polarization 1=1277
 GdB₂ 2=3998
 GdCl₃.6H₂O, 1.1-4.2°K, 2-2660 c/s 3=8719
 GdCl₃.6H₂O, spin-lattice relax. 1.1° to 4.2°K 3=3183
 Gd in Pd, and long range polarization 4=26400
 Gd³⁺ in Pd with rare earth impurities 3=8709
 Gd₂(SO₄)₃.8H₂O 2=21381
 Gd³⁺ in SrF₂ and BaF₂ effects of heat treatment, hydrolysis 4=1877
 Gd³⁺ in TiO₂, temp. var. and crystal field 4=10322
 Gd³⁺ in Y orthoaluminate 4=30733
 Ge 4=23042
 Ge, doped with P, rel. to stress 3=18131
 Ge, donor spin-lattice relaxation and g-factor 0=11612-13
 Ge, hyperfine splitting, stress depend. 2=8340
 Ge, 136 k Mc/s absorption spectrum, rel. to valence band parameters 3=25577
 Ge, p-type spin resonance predicted 0=11756
 Ge, Sb-doped, additional resonance spectra, theory 1=3930
 Ge, Sb-doped, new spectrum of four lines 1=1267
 Ge, shallow donors, effect of stress 4=13318
 Ge, shallow impurities 2=23705
 Ge type crystals, ground state splitting rel. to deformation mag. and elec. fields 4=15674-5
 H atom free radicals, at 4.2°K 2=3791
 H, atomic in CaSO₄.¹/₂H₂O, γ irradi. 4=26401

 O atom concn., quantitative meas. by e.s.r. 4=23687
 O, atomic, recombination study 0=2728
 O, fine Zeeman level transitions 4=6481
 O, recomb. to O_2 2=16494
 O recombination on surfaces 1=20743
 O²⁻ ion, in Ca fluorophosphate 2=23700
 O_2 , dissociated, atomic concn. meas. 2=3792
 O_2 in solutions, relaxation 4=2711
 O_2 -radical substituting for halogen ion rel. to paraelasticity 3=1219
 $\text{O}_2(\text{O}^{16}\text{O}^{16}$ and $\text{O}^{16}\text{O}^{18})$, g-values 0=9821
 O^{17} , in di-sec-butyl nitric oxide 3=6353
 OD, from D_2O_2 soln., 77°K, u.v. irradiated 3=20012
 OH⁻, in H_2O_2 at 77°K 0=13868
 OH⁻, from H_2O_2 soln., 77°K, u.v. irradiated 3=20012
 O^{16}H free radical, microwave Zeeman effect 2=12335
 OH and OD, Zeeman effect 1=7496
 $(\text{ON}(\text{SO}_3)_2)^{\cdot -}$, thermal motion effects 1=9407
 $(\phi_3\text{PCH}_3)^+(\text{TCNQ})_2^-$, spin-lattice relax. rel. to temp. 4=17684
 PF_4 in NH_4PF_6 , rel. to γ -irrad. 3=20652
 $\text{PO}_3^{\cdot -}$, ionic radical, struct. 2=2017
 P in S, relax. time meas. 4=28882
 Pa^{231} , tetravalent 0=10235
 Pd, Gd-doped, long-range polarization 2=21372
 Pd—Ag alloys, Gd reson., rel. to theory 2=12821
 Pm^{147} , trivalent, in La ethyl sulphate 1=20223
 Pr^{3+} in dil. LaMg nitrate, spin-lattice relaxation time rel. to echo formation 3=1195
 Pr^{3+} , Gd^{3+} in LaAlO_3 4=26383
 Pr^{3+} in Pr gallate, hyperfine struct. 4=28881
 Pt^{3+} in Al_2O_3 4=28879
 Pt^{3+} in BaTiO_3 , Ni doped 4=4413
 Pt—C system, spin/gram in various atmospheres 4=30902
 Pu^{3+} , doped LaCl_3 , La-ethylsulphate 2=4267
 $\text{RCH}_2\text{CHCOOR}'$ radicals in ester—urea inclusion cpds. 4=28277
 Rb atoms, polarized, mag. relaxation at paraffin-covered walls 3=25060
 Rb atoms, relaxation on paraffin covered walls 4=6492
 Rb ethylamine solns., decay and mols. present 4=21156
 Rb, optically driven spin precession 1=8821
 Rb^{85-87} atomic beams, h.f.s. anomaly 1=12149
 $\text{Rb}^{85, 87}$ vapour, aligned in earth's field, fine structure 4=12374
 $\text{Rb}^{87, 85}$ vapour, optically aligned, fine structure 4=6471
 $\text{Rb}^{85, 87}$ vapours, spin-exchange collisions meas. 4=25591
 RbAl sulphate, Fe^{3+} ground-state cubic crystal field splitting parameter, sign 0=1824
 RbBr, F-centres 0=4300
 RbBr, F-centres, e.s.r. and ENDOR 3=15520
 RbCl, F-centres 0=4300
 RbCl, F-centres, e.s.r. and ENDOR 3=15520
 $\text{Rb}[\text{CrAl}](\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$, splitting, var. Cr^{3+} conc. 4=20599
 RbI, F-centres 0=4300
 $\text{Re}(\text{IV})$, in cubic field 2=8671
 $\text{Re}^{185, 187}$, in glasses, anisotropic h.f.s. 4=10331

Paramagnetic resonance and relaxation—contd

- Rh-Pd alloys, Gd reson., rel. to theory 2=12821
 S, green and purple deposits, trapped radicals 0=16175
 S, purple, annealing study 3=20655
 S-state ions, parameter D, rel. to axial crystal field 3=8336
 S, sublimated 3=1191
 S, liquid, e.s.r., and polymer chains, length 3=14155
 SD radical, $J = \frac{3}{2}$ rotational state of $^2\Pi$ 4=3905
 SH, absorption and spectrum, for radioastronomy 3=19988
 SH radical, $J = \frac{3}{2}$ rotational state of $^2\Pi$ 4=3905
 SO, and molecular rot. 4=17309
 SO radical, rotational states of $^3\Sigma$ 4=3905
 SO₂, free radicals, e.s.r. 2=16565
 (SO₃)₂NO⁺ radical in aq. soln., Overhauser-Abragam effect in intermediate mag. fields 0=6815
 (SO₃)₂NOK₃, e.s.r., weak magnetic field measurement 1=13149
 S and Se org. cpds, u. v. irradiat. free radical comparison 4=30473
 Sb, conduction electrons, rel. to g-factor 2=12814
 Sb, g-factor 0=16163
 Si 1=17712
 Si 4=23042
 Si, divacancy identification 2=3905
 Si, donor electron spin-lattice relaxation 3=23244
 Si, donor spin-lattice relaxation and g-factor 0=11612-13
 Si, donors in, excited states from uniaxial stress effects 1=20232
 Si, E-centre, e.p.r. and ENDOR meas. 4=20309
 Si, electric field effects 4=26369
 Si, electron irradiat. recovery 4=28707
 Si, electronic structure of impurity transition-metal ions 0=17960
 Si, Fe-doped, passage effect and relax. time 1=20216
 Si, impurity electron states study 3=4911
 Si, irradiat., A-centre resonance 1=3656-7
 Si, irradiat., mono and divacancy study 2=12417
 Si, rel. to lattice vacancies 3=22734
 Si, n-type, doped with P, linewidth dependence on electron conc. 4=28883
 Si, n-type, paramag. centre 3=6750
 Si, n-type, spin-lattice relaxation in small particles 4=26374
 Si, neutron irradiat., centres study 3=2849
 Si, 136 kMc/s absorption spectrum, rel. to valence band parameters 3=25577
 Si, P-doped, conduction electrons, rel. to temp. 2=23706
 Si, P-doped, donor exchange integral by ENDOR meas. 4=17683
 Si, P-doped, relaxation time as function of i.r. radiation power 0=10241
 Si, P-doped, spin-lattice relaxation 0=4512
 Si, p-type, donor electrons, compensation det. 1=20231
 Si, p-type spin resonance predicted 0=11756
 Si, p-type, under uniaxial stress, absorption from acceptors 1=1266
 Si, Pd- and Pt- reson., expt. and theory 2=10705
 Si, resonant spin-spin interaction between donors and acceptors 1=1273
 Si, shallow impurities 2=23705
 Si, spin-lattice relax. rel. to valley-orbit splitting 2=8348
 Si, spin-lattice relaxation of conduction electrons 4=23056
 Si, spin-lattice relaxation of donor electrons, theory 1=11489
 Si, spin-1 centres after neutron irradiat. 4=1543
 Si, spin resonance of transition metals in 0=4514
 Si, surface centres prod. by heat treatment 3=5045
 Si, transition metal-doped, rel. to impurity interact. 2=23360
 Si type crystals, ground state splitting rel. to deformation, mag. and elec. fields 4=15674-5
 Si, vacancy trapping and annihilation by interstitial impurities 0=17959
 Si²⁺, h.f. interaction of donor electrons, double-resonance technique 0=16174
 SiC, B and N impurities 1=20233
 SiC, n-type, ENDOR meas. 4=1888
 SiF₄, γ -irradiated at low temp. 3=12874
 SiTiO₃-(0.04%)Gd₂O₃, Gd³⁺ e.s.r. 2=12824
 Sm ethyl sulphate, Sm³⁺ spin-lattice relax. calc. 2=12828
 Sm³⁺ in CaF₂, tetragonal, g factors 4=20590

Paramagnetic resonance and relaxation — contd

- Sn, 10¹⁰ c/s, 2.3 °K, orientation depend. 0=21079
 Sn tetraethyl, paramagnetic proton resonance spectra 1=12310
 Sr, in KCl, F centres 3=23235
 SrCl₂, resonance spectra of Mn²⁺, Gd³⁺, and Eu²⁺ 0=3132
 SrF₂, and crystal internal charge compensation by interstitial F⁻ 4=22460
 SrF₂, U⁴⁺ reson., rel. to optical spectra 2=23708
 Sr(NO₃)₂, γ -irradiat., spin $\frac{1}{2}$ centres meas. 4=20602
 SrO, e.s.r. data, weak cubic crystal field evidence 4=28886
 SrS phosphors, rare-earth activated 2=14730
 SrS: Eu phosphors, e.s.r. study 1=3858
 SrS:Eu:Sm, e.s.r. of Eu²⁺, detection of optical excitation 0=682
 SrS:Eu:Sm phosphor, e.s.r. study of activator-valence change on excitation 1=3857
 SrTiO₃, resonance of Fe³⁺, test of spin Hamiltonian 0=3133
 SrTiO₃, tetragonal and cubic, Gd³⁺ reson. 2=18945
 SrTiO₃ + (ZrO₂, MgO), paramagnetic particles 3=15935
 T, atomic, h.f.s. det. 0=20543
 ThO₂, Gd³⁺ linewidth, anisotropic broadening 1=20212
 Ti acetyl-acetate, Ti³⁺ g-factor 2=18947
 Ti (III) acetylacetonate 3=8715
 Ti(III) complexes, Ti⁴⁺ h.f.s. 2=3775
 Ti³⁺ in alcohol and glycerol 3=1712
 Ti³⁺ alum., rel. to nature of crystalline fields 0=8034
 Ti³⁺ in corundum 4=26436
 Ti³⁺, in corundum, spectrum and spin-lattice relaxation, theory 3=23237
 Ti³⁺ in corundum, spin-lattice relaxation 4=1890
 Ti³⁺, e.s.r. in glasses, rel. to glass struct. 2=21376
 Ti³⁺ e.s.r. in glasses, rel. to glass structure 3=3179
 Ti³⁺ ions in hydrated crystal, charge transfer, effect on relaxation time 1=9061
 Ti³⁺, resonance and relax. in corundum 0=13873
 Ti³⁺ in salts 1=14788
 Ti³⁺ salt solutions, hyperfine structure 1=18434
 Ti³⁺ salts, solns. in alcohol and glycerine 1=18433
 Ti³⁺, salt solns., h.f.s. 2=21925
 TiCl₃. 6H₂O 2=10706
 TiCl₃. 6H₂O, glycerine soln., spin-lattice relax. 2=15617, 17483
 TiCs sulphate alum., 2.5 °K 0=16127
 TiO_x (x = 1.5-2.0), temp. depend. 3=15949
 TiO₂, Co²⁺, reson., in single crystal 2=8668
 TiO₂, Cr³⁺-doped, as maser material 0=16180
 TiO₂, Fe³⁺ reson., maser action 2=1583
 TiO₂, Mo⁵⁺ reson. 2=23704
 TiO₂, Ni²⁺ and Ni³⁺ reson., analysis 2=8672
 TiO₂, oxygen-deficient and doped at liq. He temp. 1=20229
 TiO₂ (rutile), Fe³⁺ resonance at low temp. 0=11951
 TiO₂ (rutile), Mn ions in, spectrum at 9.505 kMc/s 1=1263
 TiO₂ (rutile), of Ti³⁺, OH, colour centres 4=28887
 TiO_{1.5}-TiO₂ system, e.s.r. 2=21375
 TiO_{1.5}-TiO₂ system, e.s.r. 3=3178
 TiO₂, V⁴⁺ resonance in 0=13879
 Ti₂(SO₄)₃. 4H₂O 2=10706
 Tm³⁺, Ho³⁺ in CaF₂ 4=26433
 Tm²⁺ in CaF₂, g-shift, calc. 4=7336
 Tm garnets, Fe impurities, effect of Fe³⁺-Tm³⁺ exchange interactions 4=20593
 Tu³⁺ in CaF₂, 9250 Mc/s, 4.2°-60°K 3=18134
 U⁴⁺ in Ca[Ba,Sr]F₂ 4=26433
 U³⁺ in CaF₂, orthorhombic spectrum 3=20658
 U^{3+,4+} in CaF₂, SrF₂ 4=26438
 U⁴⁺ in CaF₂, SrF₂ and BaF₂ 3=3180
 U⁴⁺, in CaF₂ and SrF₂, rel. to optical spectra 2=23708
 V, in GeO₂, amorphous and polycryst. 4=13330
 V and Mn in corundum, ENDOR 4=3959
 V oxide, resonance study 1=20200
 V³⁺ in CaO rel. to MgO, CaF₂ 3=3181
 V³⁺ and Cr³⁺ in MgO, lattice imperfection effects 4=26440
 V³⁺, in ZnSiF₆. 6H₂O, 'forbidden' transitions 1=3928
 V³⁺, in Al₂O₃ (corundum) 1=20236
 V³⁺, in Al₂O₃ (corundum) 2=4250
 V³⁺, in corundum 0=8086
 V³⁺ in corundum (Al₂O₃) 1=20235
 V³⁺, in corundum, mag. suscept. 3=20548
 V⁴⁺, in corundum, spin Hamiltonian constants 1=20238

Paramagnetic resonance and relaxation—contd

- V³⁺ ions, in Al₂O₃ (corundum), hyperfine transitions, calc., temp. effects 3=20659
 V³⁺, in sapphire 0=1834
 V⁴⁺, e.s.r. in TiO₂ (rutile) 2=2300, 6692
 V⁴⁺ in rutile, h.f.s. interaction of Ti⁴⁺ 4=23057
 V⁴⁺ in TiO 1=14788
 V⁴⁺ in TiO, spin lattice relaxation, 4.2-110°K 4=1891
 VO²⁺ solutions, relaxation 0=19167
 VO²⁺ solutions, var. conc. and added HCl, and [VO.H]³⁺ 4=14188
 VO³⁺ in Tutton salts, rel. to X-ray produced V³⁺ 4=20603
 V₂O₅, partially reduced crystals 3=15950
 VOCl₂, aq. soln., line shape rel. to conc. and temp. 2=61
 VOCl₂ aqueous solution, line shape rel to cons. and temp. 3=150
 VOCl₂, dil. soln., hyperfine line width 2=15621
 VOCl₂, dil. soln. hyperfine line width 3=5451
 VOCl₂ in LiCl-KCl 4=10315
 V^{50,51}, in VOF₂ and VOCl₂ soln., h.f.s. 4=16126
 W⁵⁺ in glasses, silicate and phosphate 3=20656
 W^{180-184,186}, in WCl₅ solns., liquid and super-cooled 3=21407
 Xe^{129,131}, atomic beams, h.f.s. 1=11065
 XeF₄ radical, in γ -irradiated XeF₄, e.s.r. spectrum 3=25136
 XeF₄¹⁹-HF, liquid, anomaly 4=21157
 YAl garnet, Cr³⁺ ground state, zero-field splitting 1=14806
 YAlG, YGaG, Gd³⁺ e.p.r. 2=12714
 Y in CaF₂, after 2 MeV β irradi. 4=10167
 Y₆ complexes, spin-lattice relaxation 0=16158
 Y²⁺(4d¹) in CaF₂ 3=15516
 Y(CH₃COO)₃.4H₂O, g-values of Yb³⁺ 0=1835
 YFe garnet, anisotropy energy 1=2496
 YGa garnet, Cr³⁺ ground state, zero-field splitting 1=14806
 YGa garnet, Fe³⁺ ground-state cubic crystal field splitting parameter, sign 0=1824
 YGa garnet, Fe³⁺ resonance in octahedral and tetrahedral sites 1=2496
 Y₃Ga₅O₁₂, low-temp. mag. props. 1=6365
 Y₂O₃, Cr³⁺ resonance, 4.2-300°K 1=9053
 Yb, spin-lattice relax. time in Yb iron garnet 2=23711
 Yb³⁺, in Al and Ga garnets 0=10239
 Yb³⁺, in CaO, covalent bonding evidence 3=25576
 Yb³⁺ e.s.r. and spin-lattice relax. in CdF₂ 4=26442
 Yb³⁺ ion, in CdF₂ 2=14826, 18948
 Yb³⁺, Nd³⁺, Eu²⁺ in SrTiO₃ 4=26441
 Yb³⁺, in yttrium garnets 0=4516
 Yb³⁺ in CaWO₄ 4=23058
 Yb³⁺ in CaWO₄, at 20°K and 3 cm 4=20604
 Yb³⁺ in CdF₂, spin-lattice, 2-77°K 3=18138
 Yb³⁺ in Tm₃Al₅O₁₂ and Tm₃Ga₅O₁₂, g-value shifts by exchange interactions 4=7318
 Yb³⁺ in Y₂O₃ 3=18135
 Zn blende lattice, combined reson. 2=2303
 Zn chromites, linewidths and g-factors 1=20189
 Zn, energy levels 1=12258
 Zn, 4sP₁ atomic levels excited by electron bombard. 2=12296

Paramagnetism—contd

- heat capacity of spin system, exper. test of Van Vleck's formula 3=22665
- hydrides, μ -mesic 1=5988
- impurity or ion-pairs, energy states 4=13306
- ion spin Hamiltonian parameters, calc., from reson. spectra 3=18127
- without Kramer's degeneracy 0=8032
- low temp. props. of salts, matrix calc. 2=4913
- luminous echo of paramagnetic crystals 4=15608
- mag. fields, high, effects on energy levels 4=1426
- magnetic double refraction of microwaves 0=2982
- magnetic interactions between atoms, review 3=3090
- magnetization entropy meas. 1=14672
- magnetostatic higher mode resonance 4=10243
- μ -mesic atoms 1=17298
- measurement, strain gauge balance 2=9672
- metal particles at v. low temp., anomaly 2=14383
- metals, cond. electrons, effect on sound velocity 4=9839
- metals, diamagnetic and paramagnetic effects of conduction electron 1=5061
- metals, electron spin, electron interact. effect 3=15756
- metals, spin paramag. susceptibility of conduction electrons, effect of electron-phonon interaction 0=11592
- metals, susceptibility rel. to lattice defects 4=7214
- molecular gyromagnetism 4=3900
- molecules, second-order, proton mag. shielding const. 2=22938
- Mössbauer effect in paramag. substs., h. f. s. theory 4=6688
- n.m.r. shifts in paramag. crystal, theory 0=1837
- neutron critical and mag. scatt. 3=986
- neutron inelastic scatt. by phonons, cross-section 1=19706
- neutron scattering in paramagnetic, spin-spin interaction 2=23638
- neutron scattering in paramagnetics, spin-spin interaction 3=6694
- neutron scattering by paramagnetic spin system 2=23639
- neutron scattering by paramagnetic spin system 3=6695
- paramagnetic effect in superconductors 0=8961
- paramagnetic susceptibility of conduction electrons 1=17436
- particles with arbitrary anisotropy, superparamag. initial susceptibility 1=10131
- particle motion in a fluid in a magnetic field 3=17036
- particles, superparamag., specific heat calc. 1=14178
- Pauli, effect on superconductors, theory 4=27412
- phonon coherent paramag. diffusion in paramag. crystal 3=10585
- polarons, susceptibility 0=21023
- polyatomic centres, symm. and microwave spectra 4=4398
- relaxation at low temp., theory 1=12359
- relaxation times of paramag. dispersions 1=20055
- resistance minimum in dilute paramag. alloys 0=2844
- rotation of polarization plane of sound in paramagnetic 2=20928
- rotation of polarization plane of sound in paramagnetic 3=2724
- and rotatory dispersion 3=19971
- ruby, susceptibility at low temp. 0=10098
- saturation, considering interatomic coupling 3=5001
- screw spin system, mag. structural changes 4=13113
- semiconductors, calc., from electron density distrib. 4=4328
- semiconductors with nonparabolic bands 3=23139
- solid solutions of paramag. impurities in nonmagnetic substrate, exchange-coupling 0=674
- solution, ions, p.m.r., spin-lattice theory 4=204
- solutions, n.m.r. 3=21413
- specific heat for strong spin-lattice coupling 4=6739
- spectra splitting due to atomic interactions 4=22824
- spin absorption, zero-field, at liq. He temps. 4=10242
- spin Hamiltonian, derivation by tensor decomposition 4=28775
- spin Hamiltonian description of energy levels 4=22947
- spin paramagnetism, theory 1=17932
- spin-phonon interaction, review 4=15409
- spin-spin interact. calc. 2=21380
- spin-spin interact. by virtual phonon exchange 2=18889, 21293
- super, in mag. dilute systems 4=13112
- and superconductive crit. field, upper, temp. var 4=11472

Paramagnetism—contd

- superconductivity in paramagnetics and critical fields of alloys, high values 4=18335
 superconductors, energy gap, meaning 3=14439
 superparamag. behaviour of aligned uniaxially anisotropic particles 1=6314
 superparamagnetic particles, anisotropy meas. 0=2999
 superparamagnetic systems, single domain, anisotropy 4=7224
 superparamagnetism, of fine particles 1=6309
 superparamagnetism, at high temp. 0=4470
 super-paramagnetism of plane ferromag. lattice in Heisenberg model 2=14769
 superparamagnetism in small grain, superposition of antiferromagnetism, calc. 1=14757
 susceptibility, He temps., paramag. salts 4=10249
 susceptibility, on Heisenberg model 2=21302
 susceptibility meas. using electromagnet pole pieces 4=8895
 susceptibility, rel. to internal field splittings 4=26381
 susceptibility, tensor representation calcs. 4=16012
 temp. independent near saturation 4=26267
 transition metal salts, superexchange model 3=11032
 transition metals, Heisenberg exchange interaction 2=10294
 weak temp. -independent, expt. evidence 2=6655
 $\text{CuF}_2 \cdot 2\text{H}_2\text{O}$ single crystals, n.m.r. study 1=20255
 Fe group, spin-phonon interactions, quadrupole selection rule 0=529
 Fe^{3+} , in spinel lattices 2=769
 Ni^{2+} hydrated salts, anisotropy 0=1778
 Sm^{152} , induced mag. field of 4f-electrons 0=402
 ZnO, high temp. induced e. s. r. signals, u. v. sensitive centres 4=30739

Parity

 baryons, from baryon-baryon interactions 1=3209
 baryons, det. from polarization, possible expts. 1=10931
 baryons, relative, rel. to electrodyn. theory 2=5589
 baryons, relative parities of Λ and Σ 0=12845
 CP invariance, fundamental symmetry law 1=3104
 CP, CPT invariance, outlines 4=1
 CP noninvariance, rel. to intermediate bosons in weak interactions 4=16815
 CPT theorem, rel. to K^0 -meson props. 3=10010
 in compound nucleus formation, role 1=8544
 conservation, in approx. unitary symmetry 4=19385
 conservation, asymmetry experiments, minimal error 0=17210
 conservation in baryon strong interactions 3=5932
 conservation, cascade reaction test 0=11128
 conservation in Fe^{57} 14.4 keV γ -transition 1=602
 conservation, in Heisenberg nonlinear 5-D space 2=7805
 conservation, in K-He interactions 0=17416
 conservation law, rel. to coupling const. classes 4=19410
 conservation, in meson group, invariance principle 0=12870
 conservation, in nonlinear pion interaction with fermion isotopic doublet 0=17383
 conservation, in π^0 -meson production 0=15411
 conservation, in π^+ production by $p + p$ at 1 BeV 0=1279-80
 conservation, of states in Rb^{85} 0=17502
 conservation, in strange particle processes 1=3104
 conservation in strong decay $\Sigma^0 \rightarrow \Lambda + \gamma$ 3=22213
 conservation, in strong interactions 0=2684
 conservation, in strong interacts. 2=18067
 conservation in strong interactions, baryon mass-differences 1=5659
 conservation in strong interactions, experimental evidence 1=5780
 conservation, in strong interactions, Fe^{59} β -decay 0=15550
 conservation, in strong interactions, invariance of CP alone 0=12833
 conservation, in strong interactions, test using β - γ and γ - γ correl. 0=2484
 conservation, in strong interactions, test using Xe^{133} β - γ angular correl. 0=17547
 conservation, in strong interaction theory 1=433
 conservation, in three-field theory of strong interactions 0=3924
 conservation, rel. to unitary symmetry 4=30167
 conserving and nonconserving interactions, mass reversal 0=5483

Parity—contd

- e-e scatt., weak interaction effects 4=5957
 e.m. interactions, rel. to Dirac monopole 3=22054
 elementary account 1=3103
 elementary particles 0=20041
 Fermi transitions, deviations from $\Delta T = 0$ isotropic spin selection rule 0=9576
 forward scatt., rel. to favoured transitions 4=27074
 $\frac{1}{2} + \frac{1}{2} \rightarrow 0 + 0$ reactions, intrinsic, rel. to cross-section 4=5952
 helicity of β^- and β^+ , by Møller and Bhabha scatt. 1=7229
 imaginary parity of spin-zero particles 1=5642
 in inelastic scatt. from nuclei, change det. from ang. distrib. 1=5904
 internucleon potentials, parity-nonconserving, invariance requirements 0=12862
 K^- -hyperon relative parity, test suggested 1=3231
 K^- - K^0 relative parity, from $p + n \rightarrow \text{K}^- + \text{K}^0$ 0=5603
 $\text{K}\Lambda$, from $\text{K}^- + p \rightarrow \Lambda + \omega$ 4=25182
 KAN 3=7929
 K-meson-baryon vertices 0=5523
 K-meson- γ -particle relative parity, determ. 0=2596
 K-mesons, charged and neutral, relative parity 0=20227
 $\text{K}\Sigma\text{N}$, meas., resonance-interference method 2=13877
 even $\text{K}\Sigma$ parity, from $\gamma + p \rightarrow \text{K}^+ + \Sigma^0$ 1=13498
 K-Y, from K^+ -N scatt. theory 3=24795
 Λ , Σ , K, and Y^* , from prod. and decay of Λ - π resonant state 1=4810
 Λ^0 prod. in C nuclei by $2 \text{ BeV/c } \pi^-$, meas. 4=9290
 magnetic monopoles, parity violation 3=21205
 mixture, in A^{41} , Xe^{138} and Lu^{177} states 0=4030
 neutrino emitted in β^- , μ^- and π^- -decays 0=2525
 neutrino, energy density, and density of universal matter 1=19172
 neutrino, energy density, and density of universal matter 2=22483
 nonconservation 0=17275
 nonconservation 1=10406
 nonconservation, in β -decay of Bi^{210} (RaE) 0=5702
 nonconservation, in Bi^{210} (RaE) β -decay 0=11356
 nonconservation in β -decay, possible expts. using Mössbauer effect 1=8635
 non-conservation, and beta decay review 4=1035
 non-conservation, and beta decay, review 4=1036
 non-conservation and conformal theory in C_6 4=9062
 nonconservation, covariant interpretation, two new spin-like freedoms 0=12832
 nonconservation, effect on crystal enantiomorph formation 0=11995
 nonconservation in electromag. + weak interactions 1=19120
 nonconservation in e.m. interactions, search for electron electric dipole moment 1=5071
 nonconservation, in $\text{K}_{\mu 3}$ and $\text{K}_{\mu 3}$ decays 0=11217
 nonconservation, in K, Λ and Σ decays 1=5642
 nonconservation, in Λ and Σ -decays 0=4004
 nonconservation, Li^{7*} (0.478 MeV) $\rightarrow \text{Li}^7$, γ -anisotropy, calc. 2=418
 non-conservation, and macroscopic rotation 4=15033
 nonconservation, in neutrino capture by protons and deuterons 0=1269
 nonconservation, nuclear fission, effect on 2=5977, 22856
 nonconservation, in π -meson production 0=5593
 nonconservation in $\pi^+ \leftrightarrow \mu^+ + \nu + \gamma$ decay 0=2566
 nonconservation, probability in double β -decay 0=13188
 nonconservation, rel. to strength of interactions 0=11084
 nonconservation, in strong interactions 0=3978
 nonconservation, strong interactions and particle decays 0=9311-17
 nonconservation, in strong interactions of strange particles 0=11234
 nonconservation, in strong interactions, of strange particles 1=2099
 nonconservation, theory, renormalization 0=2483, 12837
 nonconservation, and time reversal invariance, e.m. interactions, applic. to atomic energy levels 0=11485
 nonconservation upper limit, in O_2^{16} mol. study 2=16517
 nonconservation, in weak interactions 0=12827-30, 20032-3
 nonconservation, in weak interactions, discussion 0=17209
 nonconservation, in weak interactions, rel. to multiple model 0=20052
 nonconservation, in weak interactions, rel. to strange-particle spins 0=11235
 nonconservation, in Ξ -cascade decay 0=9437

Parity—contd

- nonconserving interactions, rel. to theory of propagators 1=10841
 nonconserving internucleon potential, effects 1=19288
 nuclei, excited states, det. from heavy ion-reactions 2=3624
 P and CP invariance in strong interact., rel. to $\eta \rightarrow 2\pi$ absence 4=19427
 p-p system, space and charge parities 1=19190
 p-p system, space and charge parities 2=22501
 particle in elementary-particle reactions, spin-zero photo production type expts. 4=19401
 π^0 -decay, T, P, C symmetries, possible breakdowns 0=9398
 π -nucleon scatt., low-energy, possible parity nonconservation 0=1299
 π -nucleon vertex, nonconservation induced by universal Fermi interactions 2=1717
 π -photoproduction, conservation 2=20386
 π^+ meson prod. from polarized protons, nonconserving contrib. 2=3381
 reflection symmetry, breakdown, and principle of restricted coherence 4=15018
 relative, determination in baryon-baryon scattering 1=2017
 relative, suggested experimental determ. 0=2504
 resonance, meas. using polarized targets 4=21813
 S-matrix theory, intrinsic parity 3=2218
 (Σ, K) relative parity from $(\Sigma^- + p)3K$ annihilation mode 0=7418
 $\Sigma-\Lambda$, odd, rel. to S-wave $\Lambda-\Lambda$ scatt. 4=19594
 $\Sigma-\Lambda$ relative parity, from pionic decays 2=13885
 $\Sigma-\Lambda$ relative parity proposed expt. 0=13066
 $\Sigma-\Lambda$ relative parity, rel. to $\Sigma^0 \rightarrow \Lambda + e^- + e^-$ meas. 2=18189
 $\Sigma^0-\Lambda^0$ relative parity, possible det. 1=548
 selection rules for reactions of polarized particles 0=2507
 space and time inversions, spinors and pseudo-spinors 0=4938
 spin- $\frac{1}{2}$ and spin-1 particles, P, C, T symmetry, Lorentz-group study 1=4756
 spinor theory, nonlinear 1=8418
 strange particles, from dispersion relations 1=16908
 strange particles, from hyperon polarization in $K^- + p \rightarrow Y + \pi$ 0=2599
 strange particles, methods for det. 0=2598
 T.C.P. theorem, free-field transformations, applications 0=321
 time parity cons. in β -decay of Bi^{210} (RaE) 0=4050
 unitary parity 4=3293
 universal weak interactions conserving doublet parity 2=3258
 violation, origin 1=2005
 weak interaction currents 1=4769
 weak interactions, rel. to elementary particles internal structure 3=24623
 weak interactions, non-conservation 3=17192
 weak nonleptonic processes rel. to strong interaction symmetries 1=16677
 Ξ -nucleon 3=19552
 $\text{Ni}^{60,61,64,65}$, ground state 2=10138
 O^{16} α -decay, parity non-conservation 1=12166
 $\text{Zr}^{90,91}$, from deuteron stripping reaction 1=17148

 semiconductor, review 2=18015, 22365
 semiconductor, Si, Au-doped, for bubble-chamber photog. control 2=18028
 semiconductor, Si and GaAs 2=9742
 semiconductor, Si junction 3=529
 semiconductor, Si p-n temp. effects 2=9744
 semiconductor, Si surf. barrier, with high reverse-breakdown voltages 2=18024
 semiconductor, space spectrometry applic. 2=18196
 semiconductor, surf-barrier, encapsulated, prod. techn. 2=18025
 semiconductor, surf-barrier, H ion response, 25-250 keV 2=18022
 semiconductor, thin Si surf.-barrier 2=9743
 semiconductor, time charact. 3=22040
 semiconductor, transit, time of charge carriers 2=5529
 semiconductor, with two opposite surface-barriers 2=20196
 sensitivity criterion for detector selection 3=9997
 separation scheme for high energy particles 2=11916
 small scattering chamber for large angular region 1=19072
 solid-state, for high resolution nuclear spectroscopy 1=16618
 solid state, low-noise linear preamplifier 2=13520
 solid state, monitoring 14 MeV neutron prod. 2=5696
 solid state, Si(n, p)Al, Si(n, α)Mg cross-section meas. 4=28045
 spark chamber 1=13264
 spark chamber, review of development 1=9699
 statistics, use of generating probab. functions 3=14833
 superconducting film as detector 2=22366
 surface-barrier diode 2=5530
 surface-barrier diodes, 0.2-300°K, mechanism 1=3089
 synchrocyclotron external beam, meas. 1=16463
 system, detecting, with selection electronics 1=13207
 target chamber, movable exit port 2=5584
 target chamber for precision ang. distrib. meas. 4=30100
 target, low evaporation, for liq. H₂, D₂, He 4=30101
 telescope, coincidence, for angular distrib. 2=5932
 thermoluminescent dosimetry device 0=9241
 thin scintillators used to discriminate ionizing particles 1=3776
 time-of-flight mass discriminator, π^+ separation 1=5771
 time-sorter for use in nanosecond range 0=15219
 transistor probe unit 3=4287
 transistors, for α -particle detection 0=9238
 travelling-wave devices, for mass analysis 0=319
 triggered spark counter μ -meson telescope 1=3292
 use of effect of radiation on electrical conductivity of insulating liqs. 4=11211
 use of multiparameter analysers, conference (1962) 4=11842
 180° deflection magnet for particle energies 2=9749
 AgCl, dislocation decoration, for recording cosmic-ray and nuclear processes 2=17960
 Au foils, meas. of flux perturbation 0=9371
 Au-Si surface-barrier, construction, performance 4=27721
 Au-Si surface-barrier, detectors 2=3634, 5527, 16094
 Au-Si surface-barrier, high-resistivity 2=11834
 Au-Si surface-barrier, pulse height meas. and calc. 4=28080
 Be foil, for Cosmotron proton beam 2=15973

Particle detectors—contd

- He³ semicond. detector, for dE dx and E meas. 1=3255
 In disk, foil depression factors 0=12995
 Li drift, high-energy 3=17114
 Li junction detector, with thick depletion layer 2=3215
 O¹⁷ nuclear bombardment targets, preparation, improved technique 4=30099
 Si crystal, Au doped, ionization detector 1=3091
 Si diffused junctions 1=3086
 Si, 14 MeV neutron interactions 1=19495
 Si, guard-ring surface-barrier detectors for β -spectroscopy 2=22487
 Si junction, appl. 2=11856
 Si junction, ionizing radiation detector 2=21166
 Si, n-type, for charged heavy particles 3=2166
 Si, n-p junctions, for heavy charged particles 2=18028

 Störners problem, modification of adelpic integral method 4=26833
 in toroidal mag. field, screw form, particle trap 0=10981
 trajectories, analogue computer 0=19784
 trajectories, calculation and plotting, trajectograph 4=610
 trajectories, in elec. and mag. fields, numerical calc. 0=12638
 trajectories, in mag. monopole field 0=17075
 trajectories in magnetic prisms, calc. 4=11707
 translation system, achromatic 4=19129
 in weak, strong and FFAG-focusing instruments 3=9880
 He³ energy versus mag. field 0=7176

Particle range

- (Heading introduced in 1963, for earlier entries see Range of Particles)
 α -rays, range-energy meas., 5-30 MeV 3=24812
 atoms, energetic in crystal lattices 3=22879
 atoms, energetic, in solids 3=8462
 atoms, energetic, in solids 3=10571
 atoms in solids, Monte Carlo range calc. for Thomas-Fermi potential 4=25977
 austenite, from X-ray diffr. at low temp. 4=23486
 in bubble chambers, use for mass determ. 4=16772
 charged particles in Si 3=17113
 dE/dR meas. in gases with low energy heavy particles 4=27578
 deep penetration, general theory 3=5711
 electrons, in Cu films, rel. to energy 4=8835
 electrons, meas. for energy calibration 4=586
 electrons, 10-80 keV, penetration depth in phosphors 3=10701
 electrons, 3 keV-3 MeV 4=15043
 50 keV ions in gases, obs. using radioactive isotopes 4=24752
 heavy charged parts., range-energy relation 3=7818
 heavy-ions, by analysis of α -line shapes 3=14677
 heavy ions of moderate vel., quasi-elastic collision theory 4=25438
 inert gas atoms in W, "tail" 4=27579
 inert gas ions in metals, keV, corrections, due to sticking and saturation 3=19373
 martensite, from X-ray diffr. at low temp. 4=23486
 and mass meas., by scintillation counters correction for non-ionizing losses 4=5994
 and mass meas., using counters, from momentum, ionization, range, energy 4=5995
 measurement of depth in solids of radiotracer atoms 4=1536
 μ , ultrarelativistic, range-energy reln. calc. 4=25127
 multicharged ions in solids and gases 3=5722
 nuclear track emulsion, from K⁺, π decays 4=9034
 optimum conditions, rel. to Beer's law 3=24041
 positrons, in Ar and N₂, meas. rel. to positronium 4=6028

Particle range—contd

- protons, in Agfa K2 emulsion 4=789
 protons, in Ilford K-1 emulsion, meas. 4=16899
 recoil-atom distrib. in flat plate, recoil-atom source and target, theory 4=29994
 recoil nuclei, counting by surface barrier semi-conductors 4=14973
 in solids, from sputtering yield 3=5721
 straggling, of heavy particles, in various subst. 4=3363
 stopping power of electron gas for charged particles, rel. to dielectric constant 4=27572
 tritons, in polystyrene, N_2 , air, Al, Ar, Ni, Kr, Xe 3=10180
 Al, deuterons meas., 5-27 keV 4=1540
 Ar ions, in H_2 , N_2 and Ar, at < 10 MeV/a.m.u. 3=1937
 Ar^{41} , in Al, 0.7 keV-2.25 MeV 3=19372
 Ar^{41} , in amorphous WO_3 and Al_2O_3 , meas. comp. to theory 4=27580
 Ar^{41} ions, in W, keV energies 3=22878
 Au, deuterons meas., 5-27 keV 4=1540
 Be^9 ions, in Al and Au, at 2-21 MeV 3=2048
 C ions, in H_2 , N_2 , CH_4 , Ar and He, at < 10 MeV/a.m.u. 3=1937
 Cu atoms, 1-10 keV, in crystals, theory 4=6891
 Cu, deuterons meas., 5-27 keV 4=1540
 Cu lattice, collision effects of Cu atom, machine calc. 4=28506
 γ -Fe, Fe^{59} self diffusion var., radioactive tracer meas. 4=30581
 H^+ and He ions, in Si 3=10708
 H^1 , in C, Al_2O_3 , VYNS films, energy loss 3=4394
 He ions, in H_2 , N_2 and Ar, at < 10 MeV/a.m.u. 3=1937
 He^4 , in C, Al_2O_3 , VYNS films, energy loss 3=4394
 Kr ion penetration into Mo in glow discharge 4=27581
 Kr, 10-150 keV, in Cu, high-values perpendicular to (110), due to focussing 3=20251
 Kr^{85} , in amorphous WO_3 and Al_2O_3 , meas. comp. to theory 4=27580
 Kr^{85} heavy ions in monocryst. Al, rel. to channelling 4=22642
 Kr^{85} ions in Al channelling events 3=15521
 Kr^{85} ions in Al, W, 2-600 keV 3=14675
 Kr^{85} ions, in WO_3 , 40 keV 3=22878
 Mg^{27} , in Al, from $Al^{27}(n, \alpha)Mg^{27}$ 4=9528
 Mg^{27} , in Al, from $Al^{27}(n, p)$ 3=6270
 N ions in Au, 0.4-6.4 MeV 3=4211
 Na^{24} , in Al, from $Al^{27}(n, \alpha)Na^{24}$ 4=9528
 Na^{24} , in Al, range-energy curve 3=4640
 Na^{24} , in amorphous WO_3 and Al_2O_3 , meas. comp. to theory 4=27580
 Na^{24} heavy ions in monocryst. Al, rel. to channelling 4=22642
 Na^{24} ions, keV energies, range in Al 3=24385
 Na^{24} recoil nuclei in Al, from reaction $Al^{27}(n, \alpha)Na^{24}$ 4=6355
 Ne^{22} , in Al, 1-3 MeV 3=4640
 Ni^{58} reactions due to 46-68 MeV α -rays, recoil ranges 4=19826
 Rb^{86} heavy ions in monocryst. Al, rel. to channelling 4=22642
 Rn^{222} ions, by analysis of α -line shapes 3=14677
 Rn^{222} ions, 2-450 keV, in Al and W. 3=14676
 W^{187} ions in W, 1.6-127 keV 3=14678
 Xe in Cu, Ni, Mo crystal lattices, 5-30 keV 4=19120
 Xe^{125} , in amorphous WO_3 and Al_2O_3 , meas. comp. to theory 4=27580
 Xe^{125} ions in monocryst. Si, 5-80 keV 4=22652
 Xe^{133} , in Al, 0.5-240 keV 3=19372
 Xe^{133} heavy ions in monocryst. Al, rel. to channelling 4=22642
 Xe^{133} ions, in W, keV energies 3=22878

Particle size

- See also Surface measurement.
 aerosols, from diffusion decay meas. 3=13625
 aerosols, Goetz spectrometer 2=6897
 in aerosols, hydrosols, flow-ultramicroscopic method 3=3415
 aerosols, natural, meas. technique 3=13691
 aerosols, polydisperse, by diffusion method 2=12985
 aerosols, radioactive, calc. 2=21598
 aerosols, size distrib., ion mobility data 2=8935
 aerosols, size distribution, light scattering measurements 1=9186

Particle size—contd

- in aerosols, from spectral transparency, calc. 4=7783
 aerosols, rel. to thermal forces 2=2455
 airborne matter, ballistic separator 0=10363
 analysis methods, evaluation 4=13659
 atmospheric aerosols 3=11416
 atmospheric precip., particle sampler, continuous-recording 2=8949
 automatic sizer and counter 1=101
 brittle solids, grain size rel. to fracture stress, theory 4=10364
 butadiene-styrene, determ. by light scattering 4=4716
 centrifugal analyser for 0.1-5 μ 3=8981
 centrifugal classifier for 4-30 μ 3=8980
 classifier for diameters < 50 μ 4=4999
 colloidal Po 0=16389
 colloidal spheres, light scattering, size distrib. curves 4=10663
 colloids, meas. by light scatt. at two freqs. 4=13749
 colloids, size distribution from light scattering 1=8239-40
 constant size particle, aggregate, geometric props. 4=23541
 Coulter coincidence counter 1=20769
 counting and sizing apparatus, photoelec. scanning 0=4682
 in crystals, optical maser, rel. to scatt. effects 2=8510
 det. by light scattering, polychloroprene latex globules 0=19446
 determination using wavelength exponent differential scatt. spectra 4=8455
 diamond powder, analysis, comparison of methods 3=23825
 disperse systems, photoelec. scanning, applic. coal dust 0=4682
 dispersion, spectrum meas. from transparency spectrum 4=13748
 distribution, in aerosols 0=3331
 distribution Cu powders 3=13552
 distribution, droplets in mists 0=1967
 distribution, single tube sedimentation apparatus 0=14139
 diver method of analysis 2=17401
 droplets in precip. clouds 2=8968
 drops, electronic disdrometer 1=12687
 dust, airborne, surface area, light and electron microscope 3=18461
 dust, electron-microscope analysis 1=7895
 dust, mine, by microscope, use of χ^2 test 3=14088
 dust samples from coalmines, size distrib. 0=6422
 in emulsions, spectroturbidimetric meas. 1=16072
 fracture distrib. function 4=13658
 globular and rod-like particles in solution, X-ray small-angle scatt. 1=15839
 grain, single, X-ray reflection, intensity theory 1=20695
 growth processes in mixing vessels, statistics 4=2158
 heat of immersion method for surface mean diameter of powders 1=18337
 interplanetary and interstellar matter, meas. 3=7019
 interstellar grains 1=2595
 irregular, area meas., various methods 3=1651
 irregular, by statistical average, meas. 2=1099
 light scattering, Mie coeffs. depend. 2=1279
 light transmission effects, by particle cloud 2=120
 liquid sprays, analysis by sedimentation 3=11363
 mathematical det., to avoid scatt. curves 2=3126
 meas., distribution, by Japanese Bahco 4=10589
 meas., using light scattering, formulae and nomograms 0=12496
 meas. with micrometer microscope 0=19384
 measurement, by higher-order Tyndall spectra 1=2560
 measurement by light scatt., use of wavelength exponent 2=7404
 measurement, shape factors, in sieve range, applic. to coal 0=16341
 metal particles prepared by evap. in Ar gas 4=4645
 micromeritics, statistical technique 3=6934
 microscopic particles, "flying spot" scanning 1=10463
 montmorillonite clay, X-ray study 1=6579
 non-volatile droplets by electron microscopy 0=6771
 non-volatile drops, size distribution determination 1=11744
 polycrystalline aggregate, distorted, determ. from X-ray line broadening 4=26685
 polydispersions, distrib. det. by turbidimetry 2=10991
 polystyrene, determ. by light scattering 4=4716
 powdered system, new characterization method 4=26702
 powders, analysis 4=20786

Particle size—contd

powders, distrib. 4=23537
 powders, distrib. 1-40 μ , using photosedimentograph 3=16570
 precipitation alloys, heat treated in mag. field 2=12934
 radiometric sedimentation analysis 1=15208
 rod-shaped particles, nomograms for size from light-scattering properties 1=2892
 rubber latex, distrib., from turbidity meas. 3=6931
 silica sol mixtures, rel. to X-ray scattering 0=12053
 small particles in suspension, photoelectric counter 0=18447
 soil, mechanical analysis short cut charts 4=10590
 in solids, meas. 3=23367
 spectral transmission and inverse scatt. theory 2=9407
 spectrum of condensing vapour 0=16736
 steel, Fe, cast, effect of cold pressing, by X-rays, reflection 3=18401
 stratosphere, aerosols 2=8965
 structure, from light scattering 4=18432
 submicron aerosols, classification by electrostatic method 1=7921
 submicroscopic, electron microscope exam. 0=8331
 sub-sieve sizing, automatic decantation 0=8262
 sub-sieve sizing, by sedimentation balance 3=21278
 suspensions, distrib. and average, calc., by numerical integration 4=10653
 suspensions, meas., by resistance, elec. 4=10655
 suspensoids, distrib. eqns. 2=4565
 thermal precipitator slides, inter-observer checks 0=8327
 from turbidity, nomogram 0=16390
 ultrasonic emulsification 1=1493
 upper atmosphere, micrometeoritic, effects 2=9008
 water drops, det. using photographic emulsions 1=12853
 X-ray reflection meas. 3=18401
 X-ray small-angle scatt., technique 2=10931
 Ag halide dispersions, change with time. 3=25839
 AgBr, ageing by precip., theory 2=8934
 Al₂O₃ abrasive grains, tensile strength rel. to size 1=20380
 Au colloids, det. from absorption spectra 2=4571
 Au colloids, radioactive 2=19170
 Ba ferrite powders, effect of particle size on coercive force 3=15879
 Co, in Hg 2=15529
 Cu-12 vol % SiO₂ alloy, rate of worsening of SiO₂ particles, electron-micrographic study 4=30868
 Fe, cast, steel, effect of cold pressing, by X-rays, reflection 3=18401
 Fe, in Hg 2=15529
 Fe-Co alloys, in Hg 2=15529
 MgO smoke, by X-ray-graphic methods 4=30911
 NaCl aerosol, size variation 3=13626
 Ni superparamagnetic nodules, determ. with Guinier high-resolution camera 4=4651
 Pt-Al₂O₃ catalyst, 300° to 1300°C 3=18367
 Sn crystallites on SiO films 3=18380
 TiO₂ paint layers 2=10993
 W carbide grains, Co coated, mag. measurements 1=6555

Particle spectrometers

(Heading introduced in 1961)
 See also Alpha-ray spectrometers, etc.
 amplitude-to-time converter, transistorized 3=19148
 analyser-multispectrograph, mag. multiangular 3=531
 automation of measurements 4=16845
 Buchner spectrometer for particle selection 1=13701
 charge and mass analysis by pulse multiplier, Hall-effect based 4=777
 charged, intensity distrib. in line focus, wave optics 4=602
 compensation of earth's mag. field 3=19399
 cosmic-ray spectrograph 2=20469
 electrostatic analyser, with 2nd-order focusing, for ang. distrib. studies 1=4748
 electrostatic-prism energy analyser 3=4209
 electrostatic, for recoil nuclei 4=16843
 field emission 3=5691
 fission products, mass separator 2=12238
 focusing magnetic fields, parameters 3=19598
 gas target for multiple-gap spectrograph 2=1632
 high transmission, spherical condenser type 1=18947
 ideal pole faces, weak, strong, FFAG-focusing 3=9881

Particle spectrometers—contd

identification, scintillation counter circuit 2=5517
 ion focusing, parabola 2=20048
 liquid-air trap to prevent carbon deposition 2=16100
 magnetic, ang. distrib. meas. 2=5535
 magnetic analyser, double focusing, for nuclear reaction products 1=3093
 magnetic, axially symm. fields, focusing 3=9875
 magnetic, characteristics calc., matrix method 3=7652
 magnetic, current stabilizer for mag. field 4=612
 magnetic, double-focusing 2=16099
 magnetic double focusing for charged particles 4=21703
 magnetic field distrib., weak, strong, FFAG-focusing 3=9880
 magnetic, modification of fringe field 1=16494
 magnetic, pole piece surface area 2=5593
 magnetic, semicircular, freq. response 2=17899
 multidimensional transfer analysis 1=16228
 multi-gap, broad-range, gas target 2=9752
 multiparameter analysers use for low energies 4=21692
 multiple-gap mag. spectrograph, charged particles 3=9871
 neutron, with one data unit 2=5684
 neutron, proton-recoil with liq. H radiator and CsI(Tl) 2=7873
 nuclear reaction products, multispectrograph 4=16844
 nuclear, for satellites and space probes 2=17981
 photoelectron, with inclined plane pole faces 2=9637
 photoelectron-scintillation spectrometer 2=3202
 photo-proton spectrometer for 2-10 MeV 1=8459
 π , spark chambers, mag. 3=17326
 π^- -meson star spectrograph 3=17327
 positrons, spectra meas. 2=20318
 print-out system for pulse-height analyser 2=7783
 protonsynchrotron, CERN, use 2=3119
 pulse-height analyser, Hutchinson-Scarrott, dead-space elimin. 2=9501
 retarding-field energy analysers, design study 2=1522
 satellites and space probes 2=17981
 scintillation, with Compton contrib., reduction 2=3201
 scintillation, energy resolution correction 1=5611
 scintillation, pair type, three-crystal 1=19064
 scintillation, pulse pile-up explanation of weak maxima 1=16624
 scintillation, stabilizing circuit 1=18734
 scintillation type, iterative response correction of data 1=7173
 semiconductor detectors, appl. 2=20199
 semiconductor (Ge, Si) 3=7748
 separation for high energy particles 2=11916
 simple broad-range mag. spectrometer 2=1521
 spectrograph for heavy particles 3=24383
 spectrometer, automatic single-channel 3=15126
 using spherical electrostatic condenser 1=1919
 time-of-flight single channel analyser for nanosecond region 1=5412
 wide-band, with double focusing 3=19500
 NaI:Tl, use for abs. standardization 3=17111
 NaI(Tl) scintillation, pulse pile-up 1=16624
 Si detectors appl. 2=1630

Particle track visualization

See also Bubble chambers; Cloud chambers;
 Luminescence chambers; Nuclear track emulsions.
 Agfa K2 nuclear emulsion, proton range 1=16633
 α , in cellulose nitrate, ≤ 3 MeV 4=16984
 analogue recognition 3=19516
 beam profile, scintillators, image intensifiers and t.v. tube sensitivities 4=9012
 bubble chambers, digitized microscopes, construction 4=14989
 bubble chambers, momentum and direction uncertainties 4=9027
 in bubble chambers, pattern formation during photography 4=14988
 bubble hodoscope, new type 2=13712
 CERN protons, 15 GeV/c, interaction with emulsion nuclei tracks 1=17101
 chart tracing method modification 4=14994
 Cherenkov chamber, using large Cherenkov angles 4=30135
 cloud chamber track simulator, three dimensional 4=30132
 cloud chambers, diffusion, photography 2=20206
 computer programme for kinematic analysis 3=19517
 cosmic ray primaries identification 1=567
 demonstration apparatus 3=3703

Particle track visualization—contd

discharge chamber, Fukui-Miyamoto, for cosmic rays 2=3434
 discharge chamber, isotropic, for relativistic charged particles 4=30136
 discharge chamber, Ne-A characts. 2=5559
 dust-track model, with Pb and Alnico slugs, for teaching 0=5458
 electron showers in Pb plate spark chamber 2=22489
 emulsion chambers, effect of hydrogenous impregnation 3=24571
 Enetra 110, comparator-type apparatus 3=4305-6
 fission-fragments, in micaceous minerals, Makrofol and glass 4=19344
 fission fragments from U^{235} , Cm^{244} , ionization along track 4=24955
 fission fragments in UO_2 films 3=822
 fission, in plastic films, electron microscope obs. 4=12819
 fission products in crystals, electron microscope obs. 4=12817
 fission, products, damage effects in mica, electron microscope study 0=19979
 fission tracks in AgCl crystals 3=821
 flash tube data, computer analysis method 2=11846
 flash tubes, array design, parameters study 2=11847
 G5 emulsion, proton track latent image formation 2=3339
 gas discharge avalanche, delineating 3=19532
 gas discharge streamers in arrested sparks 4=14993
 in gas mixture in waveguide 3=17155
 in gas, new detector 0=7248
 gaseous discharge chamber 3=2182
 handbook 3=2146
 heavy relativistic nuclei, photometric track profiles 2=3233
 hodoscope, using ferrite-transistor elements 3=1916
 Hough-Powell analysis realization 3=24561
 Hough-Powell digitizer, slit source illumination 4=5371
 Hough-Powell flying spot digitizer program 3=24562
 image intensifiers, with transmitted secondary-electron mult. 1=3001
 image intensifiers for, 2- and 3-stages, electrostatic focusing 1=7090
 inside AgCl large crystals, distortion-free 3=7754
 ionization meas. of single charged fast particles on steep tracks 4=28005
 kinematic analysis, high energy 0=9307
 light chamber or gas-amplified scintillation chamber 2=22377
 luminescence camera 0=3893
 luminescence chambers, using filament scintillators 2=3235
 luminescent chamber 0=15197
 luminescent chamber, review 2=16106
 luminous discharges in ionized bubbles injected into a liquid 3=19537
 magnetic analyser, outline 1=16462
 measurement of chamber photographs with punched card output 4=9039
 measurement, hand and automatic, punched tape 3=17120
 mica etched tracks from spallation recoils 2=18051
 in mica, fission, use in radioactive dating 3=5907
 mica, fossil U fission tracks 3=6948
 molybdenite, fission fragment track observation 1=19549
 multiparameter analysers use for high energies 4=21693
 neutral particles, tracing using gamma-sources 2=20217
 neutron, selective fission fragments, for dosimeter, slow and fast 3=24752
 nuclear emulsion multiple scattering calculation 3=7752
 nuclear emulsions, α -ray sensitivity, HNO_3 influence 1=13247
 nuclear fission products in $NiCl_2$, $NiBr_2$, enlargement by moisture 4=22650
 nuclear recoil tech. for proton scatt. 2=247, 22376
 optical method of observation 0=1231
 Papa No. 3 machine for pattern recognition 4=8016
 parallel plate counters with electronically controlled triggering 1=13266
 photographic tracking, review article 0=19988
 photography, image intensifier 4=3265
 π^- -N interactions, bubble chamber record rel. to emulsion 2=16225

Particle track visualization—contd

use of plastic scintillator filaments, utility of arrays 0=18150
 polymers use 4=3260
 protons, by He discharge chamber 2=3340
 radiation chemical nuclear track chamber 2=1646
 scanning speed, influence on efficiency 2=16101
 scintillation chamber, for μ -mesons 1=3374
 scintillation chambers, π -meson study, at 2 BeV/c 1=3101
 scintillation chambers, review 1=2002
 scintillation chambers, review 2=18046
 scintillation chambers, with image intensifier 1=3102
 silicate minerals, use 3=2843
 solid-state, registration props., critical energy-loss rates 4=11866

density, rel. to grain size in Ilford G5 emulsions 0=12762

depth gauge for nuclear emulsions 3=2181

in diffusion chambers, photometric ionization meas. 4=16785

Dirac magnetic monopole, discussion 0=1258

discrimination at high γ -intensity by K ferro-oxalate developer 0=202

electrons, in Ilford K5 and L4 emulsions, grain density 0=12761

in emulsion, analysis of track density photometric curves by Fourier transform method 0=5462

in emulsion, charge identification 0=15210

in emulsion, densitometry of tracks of heavy nuclei 1=13254

in emulsion, finder attachment to microscope 0=15209

emulsion, meas. of multiple Coulomb scatt., elimination of distortion and noise effects at high energies 4=19342

in emulsion, momentum meas., high energy particles 3=12378

in emulsion, nuclear charge det. 0=12729

in emulsion, singly-charged relativistic particles 0=15206

emulsion, particle identification by photometric device 3=24573

in emulsion, profile meas. 3=534

in emulsion, scattering const. det. in noise 1=13253

in emulsions, device for dip-angle meas. 1=13258

in emulsions, distortions and spurious scatt. rel. to dip angle 2=18043

in emulsions, improvement of visibility of α tracks 1=3100

in emulsions, microphotography device 2=5552

in emulsions, multiple scattering, from sums of second differences of trajectory arrows 3=7753

in emulsions, range-energy rel. for protons 2=20340

in emulsions, Sagitta distrib. function, background noise 1=416

in emulsions, velocity from grain density data 2=11843

energy and ang. distrib. fluctuations meas. 0=312

energy estimation from, limitations on accuracy 3=24568

flying spot meas. machines for use on bubble chamber film 4=5910

formation in G5 emulsions 2=16103

frequencies of various sizes of ion clusters 4=19337

gap meter for nuclear emulsions 1=16637

gaps, in emulsions, meas. with ocular micrometer 1=3099

in glass, obs. of damage tracks 3=22850

grain structure, in emulsions, effect of contact development 0=12781

grain structure, optical model 0=12783

granularity, semi-automatic meas. 3=19536

hammer tracks, proton interact. in emulsion, Li^8, B^8 fragments 2=20626

heavy-ion tracks in Ilford G5 emulsions 0=11073

high-energy interactions, single reaction product, kinematical analysis 4=21814

identification in fine-grain emulsions 0=197

identification in nuclear emulsions 1=13263

identification of particles in high-energy stars 0=15203

identification by width meas. 0=200

index of identification of 100μ tracks 1=411

information content, theory 2=246

ionization measurement in emulsions 0=2469

length evaluation by Pythagoras' formula in 3-dim., slide rule 1=17983

linearly biased track counting, cross-section determinations 0=2475

meas. of small-angle scatt., microscope and recorder ("Hasem") 1=5621

mica, charged particles, electron micr. study 3=2842

in mica, from U fission, and radioactive dating 4=23708

microscopic analysis, device for improvement of accuracy 0=12477

microscopic analysis, use of image rotator 0=12789

microscopic analysis, scanning device 0=12790

multiple detector systems 3=19515

Particle tracks—contd

multiple scatt. parameters, automatic meas. 0=12786-7

neutrons, in silicon, electron micr. exam. 3=15524

nuclear emulsions, momentum meas., high energy diffusion separation 3=24668

photometric study, in diluted emulsions 0=12779

plotting of charged particle tracks in time varying fields 4=8583

position location in scintillator 2=22357

profiles, semi-automatic meas. 0=12788

proton and α -ray tracks in Ilford emulsions 1=16634-5

protons and α -particles, discrim. in D1 and K0 emulsions 0=12770

protons and deuterons, discrimination in nuclear emulsions 0=12766-7

protons, in emulsions, sagitta-method meas. 0=15204

radius of curvature meas. in emulsions 2=1642

relativistic energy by meas. of mult. Coulomb scattering 0=1260

resolution in nuclear emulsions, effect of development 0=12778

scanning, nuclear emulsions, television raster method 2=18044

scattering in nuclear emulsions, Digiscat meas. 2=13714

solids, charged particle tracks, etching 3=2843

spark chamber track measuring system 2=20216

stereoscopic reconstruction 0=15198

theory of formation in emulsions 0=196

thin-down in nuclear emulsions 0=12777

3 GeV proton interactions in mica, tektite and olivine, optical microscope study 4=30137

track analysis, thermally insulated microscope 0=12476

track-grain depth meas. in emulsions 1=13255

track plotting and servo track follower 1=7175

true length in nuclear emulsions, rel. to background fog 0=12773

He^8 , from T-shaped track due to 9 BeV proton reaction 2=328

He^8 , from T-shaped track due to 9 BeV proton reaction 3=4475

Li^8 hammer tracks, from $\text{C}^{12}(\nu, \text{Li}^8)$ 1=13774

Pb^8 , fission-fragment tracks 3=25306

Particle velocity analysis

(Heading introduced in 1963, for earlier entries see Velocity analysis, particles)

See also Alpha-ray spectrometers; Beta-ray spectrometers; Ion velocity; Mass spectrometers; Particle range.

beam profile detector using scintill. counters 4=3055

charged particle beam in axial mag. field 4=29992

Cherenkov ring measurement 3=24554

cosmic rays at mountain altitudes 3=7956

electric discharge, positive column, electrons meas. 4=2957

electron stream, multi-velocity 3=14651

electrons, relativistic, teaching demonstration 4=21023

electrostatic analyser, up to 3.5 MeV/charge 4=27585

electrostatic-prism spectrometer 3=4209

group theory, invariant operators, Casimir type 3=3707

use of h.f. fields for separation of relativistic particles 4=16545

ion energy analyser, up to thousands of eV 3=7588

ion velocity gauge, absolute, testing 3=22381

ions, mean energy meas., optical meas. 3=24384

molecular beams, mechanical selector 3=15398

molecules evaporating from chamber 3=15399

momenta meas. in emulsions using spurious scatt. 4=9035

momenta meas., $\sim 24\text{GeV}/c$, with emulsions 3=12378

momentum meas. by single-gap spark chamber 3=17150

neutrons, phased chopper vel. selectors 3=4408

nuclear beams, velocity gauge, absolute 4=29989

in orbital accelerators, use of target 4=16580

pulse-height spectroscopy, high-resoln., electronic system 4=14981

pulse spectrometry, statistics 3=14833

from r.f. emission, angle of maximum 4=681

by scatt., ang. var., knowing Q 4=3364

scattering phase meas. using intensity correl. 4=5999

simultaneous meas. of several spectra 3=1922

velocity selector, image force 3=4379

Cu, cathode sputtering, rel. to focusing energies 3=25315

Particles

See Fundamental particles; Particle range;
Scattering, particles; and under individual particles,
e.g. Protons and antiprotons.

Pendulums

amplification, travelling wave, analogue demon-
stration 3=21191
analogue for circular accelerator particle
oscillations 0=19835
analogue of spiral ridge accelerator 1=9664
ballistic, design and use 4=11132
bi-pendulum, for relative gravity meas. 1=1500
dielectric, with Rochelle salt 2=14611
double, for determ. of modulus of elasticity 4=7363
double, in a plane subject to rotation 4=2613
earth vibrations effects 3=23562
elastic, with two degrees of freedom, motion
solution by differential analyser 1=5242
electrically charged torque, anomalies 4=27123
energy transfer from a.c. field 3=19403
equivalent pendulum for oscill. period calc. of
vibrating body, Schuler's theorem, proof 2=13296
Foucault pendulum, suspension construction 1=12836
Froude, circular motion 2=17396
Lorentz problem, new method 4=29511
Lorentz's problem of shortening thread 3=11744
oscillatory variations of damping, calc. 4=14011
period vs. amplitude, precision meas. 4=27124
physical, inexpensive construction 4=14006
simple, equation for amplitude dependence of
frequency 0=56
spherical, equations in three-dimensional polar
coords. 4=18121
spherical, stability of forced oscill., theory 2=11314
system hung on rod, special properties 4=2614
torsion, equation of motion and complex modulus
corrections 1=12837
torsion, with ferromag. suspension, excitation by a.c.
mag. field 1=18980
torsion, rel. to internal friction meas. 4=28913
torsion, transformer system for carrier
freq. 4=4997
torsional, impulse driven 2=4974
torsional, internal friction meas., oscillograph
appl. 2=2316
torsional, temp. depend. of internal friction 4=113
two-pendulum system, under uniform rotation,
small periodic oscill. 1=1721
vertical ballistic pendulum apparatus 3=23819
vibration with two dimensional axis movement 1=99
in viscous fluid, motion eqn. 2=15524
viscous liq. filling the cavities, small oscillations 4=8122
"whirlygig" comical pendulum 2=7156

Periodic system

See also Elements.

atomic radii, electron shells 0=11477-9
and compressibility, solid 4=26467
electron group formation and paramagnetic
susceptibility of conduction electrons 1=17436
electron groups in the statistical theory of atoms 0=7679
isoelectronic series, constant energy differences 3=22472
mathematical expression of props. var. Z , quantum numbers
 n and l 4=25472
and melting points, transition metals, and T_c 3=7386
modification, elements 2=54-78, 86-107, 18392
secondary-emission props. depend. 2=5376, 7657
surface tension, Mendeleevian periodicity 4=8189
rel. to Thomas-Fermi atom, electron scattering,
elastic, low-energy 3=12774
transuranic group, subdivision 3=12748

Permeability, magnetic

See Magnetic properties of substances;
Magnetization process.

Permeability, mechanical

See also Diffusion in solids.

anomalous polymer-penetrant permeation 3=1679
beryllia, pore props., rel. to density 2=4480
diffusion in porous media 4=126
diffusion in porous media 1=20649
dispersion of fluid in porous media, general
theory 2=13318
filtration of aerated liquids 0=14060

Permeability mechanical—contd

flow of adsorbable gases and vapours in microporous
medium 3=3823-4
flow of gasified liquid in porous medium 0=14587
gas flow in permeable solids 1=2513
gas flow through porous ceramic 1=18447
gas flow, porous media, press. distrib. 2=9297
gas thermal permeation through polymers, approach to
steady state, eqns. 4=29172
gases, in membranes monolayer 3=5461
ion-exchange resins, percolation of water under
press. 0=12067

Phase equilibrium

See also Solubility; Solutions.

acetaldehyde-water mixtures 0=6819
acetic acid-water-butane, 3 coexisting phases 4=24442
alkali halide mixtures, rel. to microstruct. 4=23520
alkali halides, evaporation, ion-molecule reactions 0=10876
alloy, binary, stability of planar interface during
solidification 4=11404
alloys, antiphases theory in f. c. c. A-B type 4=10414
alloys, CuZn₂-type short-range ordering, long-range
effects 4=10411
alloys, obs. of antiphase domains 4=7472
alloys, thermodynamic interactions, use of phase
diagrams 1=19711
benzene-iso-octane mixtures, vapour-liquid 0=6781
carbon, phase diagram 4=5448
closed crucible technique for high-temp. studies 0=12095
co-existence curve and compressibility curve near
critical point 3=3786
complex equilibrium with unknown number of
phases 1=7899
condensing systems, cluster theory 0=12094
rel. to cryogenic engineering, conference papers
(1962) 4=8533
crystalline-liquid phases, texture 3=24107
crystallization of Ta in Ge, distrib. coeff. 2=2356, 6770
diamond-graphite 1=12621
diamond/graphite/liquid, triple point 3=8793

Phase equilibrium—contd

- distribution of one component between two phases 1=2741
 DT, soln. in e-D₂, vapour-liquid equilibria, from triple pt. to crit. temp. 3=21626
 entropy of mixing interconvertible species, Gibbs paradox 1=10290
 graphite/diamond/liquid, triple point 3=9656
 HT, soln. in e-H₂, vapour-liquid equilibria, from triple pt. to crit. temp. 3=21626
 heterogeneous multicomponent systems 0=4706
 hydrogen-methane, solid-vapour equilib., pressure depend. 4=11424
 impurity in solid, and crystal imperfection structure 4=6820
 intermetallic phases 4=10417
 interphase surface, surface tension 3=11198
 isotope effects, and intermol. forces, review 4=25765
 isotope separation factor in solid-vapour and liquid-vapour 2=22092
 liquid crystals, binary, with smectic A-phases, 51 diagrams 4=18181
 liquid-liquid phase boundaries, rel. to coalescence of 2 Hg hemispheres 3=23865-6
 liquid-solid and liquid-vapour systems, comparison 2=8906
 liquids, gap system, nucleation, theory test 2=13489
 meas. at temp. up to 1750°C and 50 kilobars 0=14041
 metal solid solutions, equilibrium diagrams, statistical approach, rel. to valency 4=13469
 metallic phases, binary, thermal diffusion, theory 4=9983
 metastable alloys, thin films vacuum deposited 4=10422
 mixtures, binary, liquid and vapour composition calc., from dew and bubble isotherms 4=14454
 monotectic alloys, phase diagram application to thermodynamic interactions 1=1435
 multicomponent polyphase systems, chem. equilibrium 0=16369
 multiplicative chem. equilib. reduction to math. equiv. systems 2=15125
 naphthalene, solid-vapour, effect of inert gases at high press 3=304
 nucleation from vapour phase 2=2934
 phase-boundary reacts., pot. depend. impedance spectrum, theory 2=12956
 pressure effects, visual observation, glass-metal connector 4=2500
 solid-vapour, binary cryogenic systems 4=11424
 solid-vapour and liq.-vapour, isotope effects 3=21611
 steel, quantitative phase analysis, additive props., calc. 4=17749
 strictly regular mixtures, approx. 2=21841
 temp. distrib. in moving interface 0=208
 ternary system Si/S₂/LO, isothermal data, calc. 3=20983
 thermodynamic functions at liquid-vapour equilib. 2=17692
 thermodynamic interactions, appl. of phase diagrams 1=20583
 thermodynamics of phase equilibrium 1=8269
 III-V compounds 3=11199
 III-V melts 3=25815
 three phases, thermodynamic equilib. at boundary 4=1972
 tin, α - to β -, nucleation rates 4=15745
 transfer of matter between two liquid phases 1=2742-4
 transition metals and H₂, and hydrides, rel. to adsorption 4=10619
 transition metals in solid soln., apparent metallic valency 1=20624
 transport of solid through gas phase 2=23948
 uranium monosulphide 1=11862
 vapour-liquid, heteroazeotropic binary systems 2=11540
 vapour-liquid multicomponent systems 2=15819
 vapour-liquid equilibrium, apparatus for static meas. 4=11408
 vapour-liquid equilibrium data, consistency test 4=21355
 water-vapour phase composition in heated pipe 4=14456
 A, properties at triple point 1=16178
 A + O, liquid-vapour 2=22097
 Ag-Bi alloys, thermodynamic props. meas. 4=10437
 Ag-In films, γ , ϵ and ϕ phases, by electron diffr. 4=2002
 AgCl-Ag₂S system, phase diagram 4=24235

Phase equilibrium—contd

- Al-Ag 3=8886
 Al-AlF₃ and Al-LiF-AlF₃ systems 0=18427
 AlRe, AlRu, AlOs 0=6357
 Al-Zn 3=8886
 Au-Cd alloys, α , α_2 and β^1 phases 3=6855
 Au-In system, rel. to diffusion below 155.4°C 4=22618
 Au-Ni 3=8886
 Au-Si eutectic, composition 2=4450
 B₂C-SiC system 4=20698
 B₂O₃ + BCl₃ system, BOC1 form. 4=15837
 BaO-MgO-P₂O₅ 4=10421
 BaO-ZnO-P₂O₅ 4=10421
 Bi perovskites 2=6522
 Bi, pressure-temp. phase diagram 4=12882
 BiCl₃, liq.-vapour coexistence curve 4=29812
 Bi₂O₃-Nb₂O₅ systems meas. 3=6813
 Bi-Se system, monotectic reaction 3=16107
 CCl₄-methylene chloride solutions 0=10655
 CO₂-N₂, solid-vapour system 4=11425
 Ca, phase diagram, molten-b. c. c.-f. c. c. 4=4505
 Ca-CaH₂ system 2=2405
 CaF₂-YF₃ crystalline solns., confirmation of defects 4=6831
 CaO-Al₂O₃-Fe₂O₃, different structures 4=26643
 3CaO, MgO, 2SiO₂-MgO, Al₂O₃-2CaO, Al₂O₃, 3SiO₂ in CaO-SiO₂-Al₂O₃-MgO 4=29005
 CdO-P₂O₅ 4=30796
 CdSe, solid state-vapour phase equilib. 3=20977
 CdSe-CdCl₂ system 3=13590
 CdTe, rel. to semiconducting properties 0=2893
 CdTe in PbTe and SnTe, phase diagrams 4=23262
 Ce-Cu phase diagram, by differential thermal analysis and metallography 4=30800
 CoAl, ordering rel. to composition 3=16104
 Co-S, phase diagram 3=25734
 Cr-Si-O system at low O pressures 4=24434
 Cu-Ag, asymmetry at 800°K 4=4504
 Cu-Al, new phase α_2 , below $\beta = \alpha + \gamma_2$ eutectoid 4=4506
 CuCl, phase diagram 4=5448
 Cu-Sn, thermal diffusion meas. 4=9984
 Cu-Zn-Sb alloys 3=23466
 Fe-rich alloys, liq.-solid and δ - γ 3=13526
 Fe-Al alloys, "K-state" and order diagram 3=23467
 Fe-C system, liquidus 1=16174
 Fe-graphite solid solutions, phase boundaries in eutectoid part of equilib. diagram, rel. to pressure 4=23238
 Fe-Mu-Si 4=17748
 Fe-Nb, iron-rich, phase diagram, 1200°-1535°C 4=26556
 Fe₂O₃-BaO 3=6812
 Fe-Ru alloys 0=6385
 Ga I or II with Sn, Zn, In, phase diagrams 3=13527
 Ga-As system 3=11199
 GaSb, phase diagram 4=5448
 Ga-Sb system, three-phase line, pressure-temp. projection 4=16290
 Gd hydrides, statistical treatment 4=13486
 Ge, phase diagram 4=5448
 Ge-Al-Sb crystallization, heterogeneous, Al-Sb interaction 3=20902
 Ge-Br, chemical equilibria by weight-loss meas. 4=26596
 Ge-I, chemical equilibria by weight-loss meas. 4=26596
 HClO₄, anhydrous, phase diagram rel. to fusion data 4=9859
 H-D systems, solid-liquid phase diagrams 3=21612
 H₂-He system, liquid-vapour equilibrium 4=11409
 H₂-N₂ mixtures, vapour-liquid equilib. 2=1311
 HNO₃ → NO + NO₂ + H₂O, vapour-phase equilibrium 3=25813
 H-O in protonosphere 1=20986
 He II, liquid-vapour equilib. 2=17713
 He³ 2=1331
 He³, 0.02°-0.3°K, melting curve 3=14437
 He³-He⁴, critical point for separation 0=8862
 He³-He⁴ freezing mixtures, phase diagram, down to 0.45°K 4=8550
 He³-He⁴, liquid-crystals 4=2912
 He³-He⁴ solutions, liquid-crystal equilib. diagram, 1.4-4°K 4=29823
 He³-He⁴ solutions, stratification and solidification curves 4=378
 Hg, liquid- α and α - β , under pressure 2=18227

Phase equilibrium—contd

- Hg—metal binary systems, rel. to atomic d-shells 4=15741
 Hg—Sn, constitution diagram 3=13504
 Hg—Sn system 3=5116
 HgTe, solid—vapour, rel. to extrinsic carrier conc. 4=13497
 HgTe—MnTe system, zinc blende type 3=13543
 InAs, phase diagram 4=5448
 InAs—GaAs system, complete phase diagram 3=16120
 InSb, press—temp. diagram 4=17758
 InSb—Sb eutectic alloys, phase-boundary energies 3=23401
 InTe(II), metallic, press.—temp. diagram 4=10429
 InTe in PbTe and SnTe, phase diagrams 4=23262
 In—Te system, phase diagram 4=29011
 In₂Te₃ in Sb₂Te₃ and Bi₂Te₃, solid solutions 1=20620
 Li oxides 4=3876
 Li₂O—B₂O₃—Fe₂O₃ system, rel. to crystal growth of LiFeO₂, LiFe₂O₄ and α -Fe₂O₃ 4=7560
 Mg, Ge, Si, χ , 250°–600°K meas. 3=13142

 PbMg_{1/3}W_{2/3}O₆, ferroelectric and antiferroelectric 1=12478
 Pb—O system, 200°–900°C, 3–1400 bars 4=29214
 PbO—TiO₂—ZrO₂ system 3=3255
 PbSe—Bi₂Se₃ system, phase diagram 3=25742
 PbSe—Sb₂Se₃ system, phase diagram 3=25741
 PbTe, diagram, temp.—press. projection 3=13512
 PbTiO₃—BaZrO₃ system 3=13481
 PbZrO₃, modified with Ti⁴⁺ and Sn⁴⁺ 4=26123
 Pd—U, phase diagram to 25 at. % U 4=29014
 Pt—Pd—H and Pt—Pd—D systems, phase boundaries 4=26720
 Pu, triple points to 35 kbar in diagram 4=2001
 Pu—Al alloys, (α + δ)/ δ phase boundary position, calc. 4=13440
 Pu—Ce 4=29802
 Pu—Ce alloys, (α + δ)/ δ phase boundary position, calc. 4=13440
 Pu—Ga system, diagram 4=29015
 Pu—O system, phase diagram 4=29016
 Pu—Zn system, phase diagram 4=29018
 Rb_xK_{1-x}NO₃ mixed crystal, diagram rel. to ferroelec. phase 4=26125
 Se₂O₃—Ga₂O₃ system, melting and solid solns. 3=12001
 Sn, I—II boundary line up to 70 kbar 4=10555
 Sn—Te phase diagram near SnTe 3=6861
 Sr, phase diagram, molten—b. c. c.—f. c. c. 4=4505
 Sr—Bi, Sr-rich end 2=10905
 Sr₃(PO₄)₂ systems 2=4177
 Ta—Ir system, phase diagram 4=13502
 Ta—N dilute solid soln., instability 2=2413
 Ta—O system 0=12095
 Ta—Rh [Ir, Pd, Pt], intermediate phases, structure 4=23280

Phase equilibrium—contd

- Ta—Rh, rel. to constitution diagram 4=15744
 Ta—Zr system 0=6384
 Th hydrides, statistical treatment 4=13486
 Th—Ce phase diagram, revision 4=29020
 Th—In diagram rel. to temp. and press. 3=20886
 Ti—Al alloys, three phases 3=13502
 Ti—Al—Co alloys, ageing process 3=18354
 Ti—Cr alloys 3=22898
 Ti—Cr system, investigation of Cr-rich region 4=13504
 Ti, b.c.c., β -b.c.c., and β -f.c.c. phase equilibria, 100°C and 37 kbar triple point 4=30806
 Ti—Ni, phase diagram 4=10439
 TiO₂—NbO_{2.5}, phase relationships, micro method 4=7507
 Ti base alloys, kinds of phase and boundaries 1=11578
 Ti—Sb liquid system 4=29619
 U oxides, phase diagrams 4=2140
 U-rich binary alloys for nuclear fuels 2=17033
 U—C system, phase diagram 4=13611
 U—Mo, below 900°C 0=18378
 γ U—6 at. % Mo, kinetics of isothermal decomp. 3=25764
 UO₂, at 1600°C, U precipitation 3=13591
 U—Pu—C ternary phase diagram below 50 at. % C 3=25747
 U—Pu—C ternary system, below 635°C 3=25748
 U—UO₃ system, phase diagrams 4=11402
 V₂O₅, phase diagram 3=15779
 W oxides, solid/gas phase 0=1955
 W—C system, phase diagram 4=26570
 W—44 at. % Mo, ordering 3=20891
 W—Ru alloy, rel. to constitution diagram 4=15746
 Zn—Al system (40–75 wt % Zn), phase diagram 4=23299
 Zn in ZnS 1=8914
 ZnO—CdO—P₂O₅ 4=30796
 ZnP₂O₇—Cd₂P₂O₇ 4=30796
 Zn(PO₃)₂—Cd(PO₃)₂—Mg(PO₃)₂ system 4=26573
 Zn₃(PO₄)₂—Cd(PO₄)₂ 4=10444
 Zn₃(PO₄)₂—Mg₃(PO₄)₂ 0=2953
 Zr—Al alloys different phases rel. to gettering props. 4=21200
 Zr—Fe, Zr₄Fe and Zr₂Fe phases 4=10442
 Zr—H system, thermodynamic functions 4=3989
- Phase transformations**
 acetamide, rel. to Raman spectra 0=5948
 acetonitrile, study by N¹⁴ pure quadrupole resonance 0=6283
 acoustic dispersion and absorption, transforms. of second kind 4=14289
 aerosols, processes and formation from supersaturated vapour phase 1=11626
 aggregation on ageing, Cu and Ag solid films 4=10608
 alkali halide vapours 1=11629
 alkali halides, polymorphic transitions, Born model 2=14921
 alkali iodates 1=14833
 alloys, b.c.c., ordering with 4 kinds of site 3=8904
 alloys, binary, ordering, effect on elastic const. 4=13361
 alloys, binary, thermodynamics 2=12924
 alloys, energy of order, theory 1=20588
 alloys, equil. order parameters, quantum and class. theory 4=10413
 alloys, eutectic, nucleation 3=13503
 alloys, f. c. c., ordering, statist. theory 4=13467
 alloys, growth of diffusion-limited centre 3=5127
 alloys, mag. directional ordering, rel. to superlattice 3=18072
 alloys, order—disorder, by single-vacancy migration 3=13530
 alloys, ordering, by two-time Green functions 3=11292
 alloys, precipitating, rel. to heavy particle bombard. 2=21547
 alloys, second phase precipitation rel. to boundary migration 3=13534-5
 alloys, spinodal, magnetic ageing 4=7244
 alloys, ternary, thermodynamics 2=17044
 Alnico 5, α — γ , thermal expansion obs. 4=23251
 AlNiCo 500, AlNi, magnet by microsonde and microhardness 3=16090
 α and β -Ti, ω -alloy phases, δ -Ti oxide and Ti monoxide, structural and geometrical relations 0=16310
 anatase—rutile, effect of impurities 0=7895
 ANKO-4 alloy, γ -phase form. at 750–800°C 4=17805
 anorthite, 25°–350°C 3=16019

Phase transformations—contd

- antiferroelectrics, lattice theory 4=22778
 antiferroelectrics, superstructural cells and domains 4=10116
 antiferromagnetic alloys, b.c.c. lattice, ordering and magnetization processes 4=29000
 antiferromagnets, uniaxial, 2nd order transitions, magneto-elastic props. 4=26348
 Armco iron, ageing, effect of deformation 2=12929, 15068
 Armco iron, α - γ , discontinuous change of thermal and elec. props. 0=13498
 austenitic alloys, $\gamma \rightarrow \alpha \rightarrow \gamma$ transformation, strength increase 4=17738
 austenite, fine structure due to martensitic trans-form. 3=20866
 austenite formation, rapid heating, X-ray anal., recording apparatus 4=23270
 austenite, second-kind ordering 1=7832
 austenitic steels, heat treatment, second-kind ordering 0=18397
 austenitic steels, martensitic components 3=23483
 austenite, supercooled, ferrite grain growth 3=5127
 austenite, under-cooled, theory 4=20708
 p-azoxanisole with and without phenanthrene, near freezing 4=11181
 benzene crystals, first-order, study using positron annihilation 4=23300
 beryllia, 2080°C 2=14924
 binary alloys, short range order effects 3=8901
 binary eutectic systems, crystallization mechanism 4=30862
 binary semiconductors, differential thermal analysis 0=12081
 binary systems, temp. var. 4=1977
 biocolloids, order-disorder transitions 4=15851
 biphenyls, effect on γ -radiolysis 3=3411
 boson gas 0=3462
 brass, quenched, 60:40, hexagonal phase 2=8847
 α -brass, undeformed specimens 4=26571
 β -brass, $\beta \rightarrow \alpha$ spontaneous transform. 2=23869
 brass, β , martensitic 4=10526
 β -brass, martensite formation, during electrolytic thinning of foil 3=8891
 β -brass, order-disorder, self-diffusion, statist. dynamics 2=3934
 β -brass type alloys, ordering, effect on thermoelec. power, theory 1=19913
 p-bromotoluene crystals, first-order, study using positron annihilation 4=23300
 bronzes, Al, martensitic transformation 1=6530
 camphor solid solutions, temp. varn. with camp. rel. to molec. tumbling 4=30741
 d-camphor, II-III, at high press., region of indifference 4=13510
 cast iron, Cr-bearing, nuclear irradi., graphitization 4=26554
 cast iron, graphitization, effect of Cr 4=29010
 cellular precipitation, solid solns., Turnbull theory 4=10415
 cellulose acetate, alkali-chloride doped, glass transition 4=7735
 cholesterol esters, liquid crystals 3=21370
 classical many-body theory, coupling rule 2=11295
 close-packed to nonclose-packed structures, pressure-induced polymorphic transitions 4=15728
 coherent lattice rearrangement 3=3284
 condensing vapour, flow through constant cross-section pipe 1=8099
 constitution diagrams, for b.c.c. lattices, AB and A_3B long-range order 3=3325
 Costa Ribeiro effect, influence of crystallographic orientation 1=1119
 cristobalite, optical obs. 0=1878
 critical assemblies, small-angle scatt. 3=52
 critical isotherm near critical point 1=18672
 critical isotherm near critical point 3=3924
 critical isothermal degree 4=27390
 critical point, density fluctuations 1=18671
 critical state, ultrasonics, effect on light diffr. 2=5188
 cryogenic solids containing free radicals, effect on flame propagation 3=5161

Phase transformations—contd

- crystal, ferromag. model, nucleation field, magneto crystalline anisotropy effect 4=30708
 crystallization, NaCl, "Morphodrome" diagrams 3=16042
 crystals, Ehrenfest relations 1=19727
 crystals of O_h symmetry group 0=16252
 crystals, perfect and with lattice defects, comparison 0=13761
 crystals, of T_h symmetry 0=18343
 cyclohexane crystals, first-order, study using positron annihilation 4=23300
 cyclohexane, solid, rel. to positron annihilation 3=2774
 deformed crystal, Bose-Einstein condensation of excitons 4=6804
 diamond, allotropic, graphite orientation 3=20776
 diamond \rightarrow graphite at 1500-1900°C 4=7492
 diamond, graphitization 0=21185
 diamond, graphitization, surface orient. effect 3=13398
 diamond, under high-pressure 3=23375
 diamond, meteoric origin 2=8761
 diamond structures, up to 50000 atm pressure 4=5448
 diamond, surface and internal graphitization 2=21460
 p-dichlorobenzene, α - β , n.q.r. 2=791, 8688
 differential thermal analysis, of cmpds. with high vapour press. components 2=7087
 diffusion-controlled, influence of "drift" upon kinetics 4=10412
 diffusion processes of crystalline phases in binary metallic systems 4=23236
 diglycine nitrate, at -67° and -150°C 4=7653
 diphenylamine crystals, first-order, study using positron annihilation 4=23300
 direct observation of high temp. phase changes, possible method 4=10512
 disordered structures, ordering processes 1=15027
 Duralumin, ageing study using n.m.r. 1=6540
 effect on Bi self-diffusion in Bi_2O_3 4=6867
 elastic disks, 2-dimens. system of 870 particles 2=17699
 electronic transformations, spin effects 1=7551
 entropy change, stability, calc. 4=27394
 equation of phase-transition curve 0=6991
 eutectics, binary, lamella-rod transition 3=25758
 eutectics, lamellar, freezing and entropy prod., theory 4=5449
 f.c.c. \rightarrow b.c.c. lattice 4=9954
 f.c.c. \rightleftharpoons h.c.p., rel. to cold working 3=3256
 f.c.c. lattice, Ising, mag. ordering theory 3=8649
 f.c.c. metallic alloys, antiphases 3=20881
 ferrites, induced by shock waves 2=15057
 ferro- antiferromagnetic, entropy changes 3=15750
 ferroelec. and antiferroelec. crystals, theory 0=10014
 ferroelectric, broadening, mechanism 3=17935
 ferroelectric crystals 1=19936
 ferroelectric crystals, quantum effects 2=2203
 ferroelectric and ferromagnetic, crystal symmetry changes 4=20747
 ferroelectric-paraelectric, symmetries 4=29001
 ferromagnetic alloys, b.c.c. lattice, ordering and magnetization processes 4=29000
 ferromagnetic alloys, f.c.c., ordering 4=15634
 ferromagnetic alloys, h.c.p. lattice, ordering and magnetization 4=22965
 ferromagnetic alloys, Fe_3Al -type, ordering 4=17759
 ferromagnetic, as first-order effect 2=8618
 ferromagnetic materials, first order, rel. to magnetic disorder 3=1002
 ferromagnetic, short-range order at Curie point 3=11042
 ferroelectrics, 2nd-kind transition, rel. to Raman light scattering 0=20974
 ferroelectrics, space group change law 0=13986
 ferromanganese alloy, $\gamma \rightleftharpoons \epsilon$, cycles 3=5128
 first kind, kinetics, volume pressure effects 1=14940
 first kind, thermodynamic singularity 4=8514
 fluids, canonical partition function, cellular method 2=21292
 free-volume model of amorphous phase, glass transition 1=4073
 gas, liquid and solid, cell theory of classical liquids 0=19098-9
 gas-liquid, rel. to statist. mech. RPA 2=15802-3
 gas of long thin rods, first-order 4=225
 geometric basis of phase change 1=5270

Phase transformations—contd

- germanate pyroxenes and related cpds., high-pressure 4=4509
- Gibbs free energy increase, bulk specific, rel. to nucleation of supercooled droplets 4=27376
- glass, in polymeric materials, multidim. 3=25766
- glass transition, thermodynamic aspects 4=7733
- "globular" organic cpds., neutron inelastic scattering 3=13393
- glycine silver nitrate, ferroelec. transit. 4=20423
- graphite to diamond 3=6819
- graphite—diamond, catalysis by metals 4=1991
- graphite—diamond, equilibrium curve, calc. 4=4508
- graphite, diamond and other phase form. by strong shocks 2=4360
- graphite—diamond, study methods 4=4507
- graphite, melting, high pressure 3=6818
- graphite, pyrolytic, graphitization, applied stress effect 4=20704
- graphite, rhombohedral form prod. by deformation 3=25627
- growth of aerosol particles by diffusion 1=11632
- heat transfer bibliography 3=7364
- heterogeneous nucleation, review 3=11206
- hexamethylbenzene rel. to conductivity 3=10873
- hexamethylbenzene, rel. to low-temp. n.m.r. 2=8684
- high polymers, second-order transitions 1=15165-7
- high-pressure cell, for optical study 4=28658
- high-pressure, visual obs. 3=11208
- ice crystal nucleation on aerosol particles 1=11628
- ice, high-pressure forms, structure 0=16319
- ice, low-temp. forms, formation temps. 1=7868
- ice VI and VII at atmos. press. 4=26553
- ice, II, III and V, at atmospheric pressure 3=11202
- ice, vitreous—cubic—hexagonal transitions 1=10228
- incandescent materials, temp.—time meas. appar. 4=2872
- investigation by damping capacity 1=10206
- ionic crystals, effect on u.v. absorption 0=10038
- ionic crystals, to metallic states, calc. 2=6761
- irons, cast, graphite formation during cooling from 1000-700°C, from u.s. velo. decrease 3=23473
- Ising binary lattice, order—disorder transitions 1=15140
- Ising model of cooperative phenomena, reformulation 4=28782
- Ising model, dimer statistics 3=14043
- Ising model long-range interact. 3=12899
- kinetics study using dilatometer 3=21277
- λ -transitions, thermodyn. theory 2=23871
- lattice gas, spherical 0=18997
- lattice partition, rel. to individual funcn. 4=30794
- Laves phases, thermochemistry 4=10418
- layer with polymorphic transformation, inelastic and residual deformation 2=6828
- liquid binary mixtures, first and second order 1=18674
- liquid crystal p-azoxyanisole with and without phenanthrene, near freezing 4=11181
- liquid—gas, equation of state, organic compounds 4=367
- liquid \rightarrow glass 3=12003
- in liquid model, representing solidification 1=12866
- liquid—vapour, liq.—liq., struct. effects on u. s. waves 4=27140
- liquid—vapour, statistical mechanics 4=16297
- low temp. apparatus, 20-300°K 4=5487
- luminescence during phase changes in crystals 1=7731
- magnetite, at low temp., thermoelec. data 0=6148
- magnetite, magnetocaloric effect, low temp. 1=3897
- magnetite, order—disorder, -155°C, rel. to magnetization 4=26312
- magnetometer, for invest. with rapid heating and cooling 2=1554
- manganite 4=26561
- manganites, by temp., struct. transform. 2=14923
- marble, shock adiabat 0=3585
- martensite—ferrite, thermodynamics 3=5120-3
- martensite, at low temp. 4=10416
- martensite reaction in steel 1=20582
- martensite temperature, rel. to twinning temp. 3=11288
- martensite-type, lattice reconstruction, book 4=7528
- martensitic, crystallographic analysis by prism matching 1=1400
- martensitic, dilatation parameters 3=8889

Phase transformations—contd

- martensitic, theory 0=16313
- measurement, electron interferometer 2=10954
- in metals, accompanying acoustic effects 4=15414
- metallic alloys, ordering, effect on elec. cond., theory 1=17600
- metallic hexafluorides, orthorhombic to b.c.c. 2=8077
- metals, mag.—non-mag., Pauli susceptibility anomaly 4=4322
- metals, microheterogeneous condensation in vacuum 2=1308, 7468
- metals, resistivity change, voltage signals 2=4451
- metallic systems, microscopic study 2=15055
- metals, up to 250 000 kg/cm² press. 2=618
- metal whiskers 1=15010
- mica, nucleated by particle irradi., obs. 2=16977
- miscibility point, dielectric behaviour 1=6871
- mixture, phase separation, temp. dependence 4=24178
- molecular crystals, distinguishable molecular orientations 2=8764
- molecular crystals, fusion rel. to solid transitions 2=1309
- molecular crystals, phase transition theory 0=15803
- molecular solids, n.m.r. study 2=8678
- moving boundaries in ferromagnetic, ferroelectric and superconducting materials 1=7875
- multicomponent systems, matrix thermodynamics 2=9200
- muscovite, 700-1200°C 4=7501
- naphthalene crystals, first-order, study using positron annihilation 4=23300
- Nichrome, at low temp., volume changes 3=20885
- Nichrome, recryst. nuclei formation obs. 4=13474
- monimonic alloys, ageing 1=15127
- Nimonik-type alloys, ageing 3=16113
- nitrites, nitrites, crystal, from u. v. spectrum 4=7509
- p-nitrophenol, $\beta \rightarrow \alpha$, lattice reconstitution 4=17779
- noble metal alloys and solid solns. 2=8837
- nucleation by crystalline particles 3=7394
- nucleation of water aerosols 1=11627
- nucleus growth, surface tension effects 4=18488
- I—VII, II—VI, and III—V cpds., from press. depend. of absorption edge 1=8986
- order—disorder in alloys, interact. bet. atoms 3=8380
- order—disorder in alloys, lattice vibrations contrib. 0=21233
- order—disorder, and creep 4=26519
- order—disorder model, 1-dimens., which approaches second-order phase transition 1=9149
- order—disorder phenomena, theory 2=19091-2
- order—disorder, polar model 3=8899
- order—disorder systems, one-dimen. 2=16576
- order—disorder transformation in b.c.c. lattice, Monte Carlo calc. 1=20590
- order—disorder transformations, in ternary alloys 0=16336
- order, short-range, in alloys 3=8905
- ordered structures formed by chemisorption 4=30886
- ordering alloys, theory for hexag. close-packed lattice 2=6819
- ordering, in β -brass type alloys, quasichemical model 4=1980
- ordering, inhomogeneous, due to excess vacancies 2=8848
- ordering, rel. to mechanical properties 3=20685
- organic compounds, liquid-polycrystal region 3=21355
- organic cpds., rel. to Debye dipolar absorption 3=22987
- organic crystals, first-order, study using positron annihilation 4=23300
- ozone—F—O liq. system 2=21904
- parachlorotoluene, singlet \rightarrow triplet transition, luminescence spectra 0=16099
- n-paraffins, crystalline, theory 3=16020
- n-paraffins, at high pressures 1=2747
- paraffins (normal), data and theory 2=16978
- pentaerythritol, effect of high press. 2=21459
- pentaerythritol, effect of high pressures 3=3252
- 78-Permalloy, mag. ordering and elec. props. 1=6533
- Perminvar, mag. ordering and elec. props. 1=6533
- phase-boundary motion, converse Stefan's problem 0=14862
- phase boundary stability round growing particle 3=11297
- phase coexistence, strain terms, bulk free energies 0=220
- phenol crystals, first-order, study using positron annihilation 4=23300

Phase transformations—contd

N-phenylbenzylamine crystals, first-order, study using positron annihilation 4=23300
 n-phenylenediamine, rel. to Raman spectra 0=5948
 phthalocyanine, $\alpha \rightarrow \beta$, large decrease in elec. cond. 1=14393
 Pippard equations, generalization 4=27392
 polar crystals, theory 1=2362
 polyethylene, deformed, rel. to stretching direction 4=20679
 polyethylene, γ -transit., e.s.r. study 2=14833
 polyethylene, glass transit. temp. 2=23904
 polyethylene, second order 1=9155
 polymer solns. in H_2O , conc., separation 4=24179
 polymers, glass transition temp., rel. to dielec. relaxation 4=26108
 polymers, second-order transition, analysis and effect on mechanical props. 1=7879
 polymorphic, in anomalous substances 0=19504
 polymorphic, and crystal symmetry 1=14947
 polymorphic, high pres., a.f. and r.f. obs. 4=20695
 polystyrene, glass, heat capacity 4=7736
 polystyrene, transition at 50°C, DTA study 4=7737
 p.t.f.e., 75-380°K, up to 21 000 atm 0=1875
 polytetrafluoroethylene 4=28975
 polytetrafluoro-ethylene; thermal props var. 4=30533
 polyvinylcarbazol in benzol, vitreous 3=8920
 post-transition metal tellurides, solid solns. 2=23858
 quartz, $\alpha = \beta$, and deform. 3=15990
 quartz, amorphous—cryst., by Ag diffusion 3=13396
 quartz, amorphous state prod. under shock conditions 0=6324
 quartz—cristobalite, Kr⁸⁵ diffusion meas. 2=4361
 quartz, displacive, due to neutron irradiation 4=26564
 quartz, on heating in H_2 , amorphous state with crystallization centres 3=20917
 quartz, 2nd-kind transition, rel. to Raman light scattering 0=20974
 quartz, vacuum sintering 1=20399
 quaternary alloy model, order—disorder problem, soln. on square net 4=27080
 radiation induced, necessity of impurities 4=17776
 rapid, dynamical characts. 2=4451
 rapidly running transit. at high press. 2=23806
 rare-earth arsenates and vanadates, pressure rel. to ionic radii 3=18225
 rare-earth metals, heavy, allotropy at high temp. 4=23265
 rare-earth niobates and tantalates, at high temp. 4=20715
 rare-earth oxide systems, X-ray study 2=4356
 rare-earth pseudo-binary systems, Laves phases 2=17042
 rigid-disk system 4=16288
 Rochelle salt, para-ferroelectric, mechanism, and Raman spectrum 3=20484
 rubber, glass transition, pressure effect meas. 4=7454
 salt mixtures, elec. cond. rel. to melting 2=9464
 and scattering, light, ferroelectric 3=20450
 second kind, ordering kinetics 2=17048
 second kind, ordering kinetics 3=6864
 second kind, pressure effects, applic. to superconductivity 4=1976
 second kind, theory 4=1974
 second-order, ferromag. to mixed ferroelec. and ferromag. phase 3=23147
 second-order, He⁴ as model 0=14914
 second-order, relax. phenomena, theory 2=23805
 second-order, relax. slowing, microscopic mechanism 4=16289
 second-order, theory 1=6193
 semiconductors, to cond. state, by press. 2=16704
 short range order detection, by paired dislocations 4=4499
 silica, vitreous, Hugoniot curve, shock crystallization 0=3259
 sintered material, elastic energy 3=20769
 soda—lime—silica glass, rel. to stress relaxation 4=4680
 soft magnetic alloys, disorder—order transformations 1=1215
 solid binary and ternary systems, relative molar thermodynamic functions 1=15131
 solid—solid, press. meas. by piston gauge 2=10778
 solid solutions, activation energy 0=1935
 solid solutions, effect on thermal conductivity 0=15820

Phase transformations—contd

solid solns., metallic, conference 4=10407
 solid solutions, multi-component, degree of short range order 1=9148
 solid solns., multicomponent, order—disorder 2=10919
 solid solutions, nucleation, ageing 0=1929
 solid solutions, order—disorder, f.c.c. lattice, appl. of nonlinear integral equations 3=18347
 solid solns., redistribution of components on decomposition and internal boundary adsorption 4=26543
 solid solutions, substitutional, anal. by internal friction 0=1933
 solid solns., supercond. transition temp. 2=8864
 solid solutions, super-saturated, decomposition kinetics, theory 3=20907
 solid solutions, X-ray scatt. rel. to degree of order 1=20616
 solidification front in liquids 2=19773
 solids, brief survey 2=14346
 solids, correlated cell model, cooperative motion 4=10409
 solids, crystallographic orientation, charge formation depend. 0=16005
 solids, electron diff. study of rapid changes 2=2440
 solids, gradual phase transitions 1=7835
 solids, "linear" transitions, rel. to Ehrenfest's eqns. 4=1973
 solids, premonitory phenomena, review 4=1975
 in solids, review 3=11207
 solids, second-order, detection from shocks 1=14937
 solute redistribution 4=27370
 solutions, binary, effect of impurity 2=15579
 spherical precipitates, bounds on nonlinear-diffusion-controlled growth rate 0=15871
 spinels containing Mn³⁺ ions 1=20556
 spinels, transition-metal, tetragonal to cubic phase, theory 0=1550
 spinels, $X_2Y_{1-x}Z_2O_4$, correl. parameters 2=19028
 spinodal decomposition in cubic crystals 2=10780
 statistical mechanics 1=15718
 statistical mechanics, interrel. of theories 4=8098
 statistical mechanics of, 2-dimensional configuration model 4=5079
 statistical thermodynamics of one-dim. system 4=8087
 steel, ageing kinetics, structural changes 4=29009
 steel, $\alpha \rightarrow \gamma$, rel. to deformation by waves 2=2322
 steel austenitic, stainless, Ti stabilized, σ -phase formation 3=3337
 steel, Cr-Ni austenitic, ageing, effect on thermal and elec. cond. 4=12663
 steel, Cr stainless, heat capacity study 2=23078
 steel, deformation recovery, 50° to 70°C 4=4462
 steel, rel. to dislocation heredity 2=16656
 steel, effect of applied tensile stress 0=16337
 steel, isothermal transforms., free energy changes 2=23874
 steel, mild, brittle—ductile, neutron effects 2=6824
 steel, Mn, γ - α , effect of etching 2=21457
 steel, Mn-V, during elec. heating 2=6827
 steel, rel. to n-irrad. 2=23765
 steel, Ni—Cr—Mo alloy, martensite formation rel. to tensile stress 3=3323
 steel, residual austenite, temper ageing 1=15138
 steel, separation of cementite in austenite 4=1989
 steel, stainless, martensite transd. obs. 2=6825
 steel, stainless, thermal f.c.c. to h.c.p., nucleation 4=26567
 steel, tempering process 1=12644
 steel, (225) F transform. 2=15056
 steels, C and Cr, austenitic transformation, white layer formation 4=23269
 steels, hardenable, austenitic grain size, method of study 1=20609
 Stefan problem for nonuniform media 4=14450
 Stefan problem, 2 phase, finite difference soln. 4=18489
 Stephan's problem, single-phase 2=15801, 19771
 stiskovite, crystal habit rel. to temp. 4=26565
 study using Debye—Scherrer 19cm X-ray camera 4=27345
 study using quadrupole resonance of impurity molecules 0=4539
 supercond. films, to normal, var. field, temp. 4=21396
 superconducting-to-normally conducting, in transmission line structures 4=18545

Phase transformations—contd

superconductive transition, thermal and elec.
aspects 2=1333
superconductivity, second order, electron-pair correl.
as "inner field" 4=21395
superconductors 4=27414
superconductors, spin ordering 3=12023
superconductors, from spin susceptibility, short range,
calc. 4=18552
superconductors, thin-film 4=396
surface phases, thermodynamics, theory 0=5213
temperature-time recording, by thermocouple 4=5430
ternary semicond. cpds., ordering mechanism 3=18350
thiourea, rel. to ferroelec. props. 2=667
thiourea, ferro- — nonferroelec. under 4000 kg cm⁻²
press. 4=26130
toluene, triple point 2=15822
"topotaxy", in solid-state reactions 0=6337
transition metal hydrides 0=18289
transition metals and their alloys, rel. to band
structure, theory 0=17911
triglycine sulphate, ferroelec. 2=23508
triglycine sulphate, ferroelectric 1=14556
triglycine sulphate, γ -irrad., ferroelec. switching
mech. 2=8673
triple point, thermodynamic peculiarities 4=5477
in two-component systems, calc. from atomic props. 0=8649
in two-phase mixtures, during elastic wave
propag. 1=11806
two-phase systems, residual stresses 4=23099
without unit cell change, point group
representation 1=4033
uranium, polygonization due to allotropic
transformations 1=6485
vapour-liquid, specific heat near critical
point 1=1847
volatiles on lunar surface 1=18034
water, freezing, sorbed on Si gel, n.m.r. obs.,
to -100°C 3=19069
water sorbed on ice-forming nuclei 4=13539
water, triple point 0=1056
water-water vapour, specific heat meas. 2=13485
wüstite disintegration, kinetics, study by mag. analysis, and
mechanism 4=23268
wüstite, metastable triple point 4=20710
wüstite, second order from, thermodynamics 4=26742
X-ray diffr. technique, to 100 kbar 2=8811
X-ray diffraction obs., apparatus for high pressures
and temp. 4=10519
zincblende, under high-pressure 3=23375
zincblende structures, up to 50 000 atm pressure 4=5448
Zircaloy-2, α - β change, obs. by electron emission
microscope 4=7520
Zircaloy-2, hot working 2=4460
zirconia, neutron irrad. 0=1822
A_{0.8}B_{0.8} alloy, order and disorder-antiphase trans-
itions 3=8887
ABX₂ covalent compounds, order rel. to thermal
props. 2=20947
A-Xe mixtures, solid-liquid equil. 1=1848
Ag, amorphous film, rapid crystallization 2=2440
Ag azide, crystal forms 4=17493
Ag germanide, metastable phases, X-ray diffr.
exam. 4=29833
Ag halides, mixed ternary crystals, equil. 2=10895
Ag and Cu halides, obs. by h.p. microscopy 4=15743
Ag telluride, metastable phases, X-ray diffr.
exam. 4=29833
Ag-Al, ordering in hexagonal ζ -phase 3=6862-3
Ag-Cd alloys, annealing spectrum of cold-worked
specimens 4=23290
Ag-Cd alloys, X-ray study 1=15118
Ag-Cd films, β - γ , electron diffr. study 2=10910
 β -AgCd, b.c.c. \rightarrow h.c.p. transformation produced by mech.
deformation, reversion 0=18373
AgCd, order-disorder, by X-ray diffr. and mech.
testing 3=3328
AgCd-AuCd, β -system, elec. resist.
data 2=17040
AgCl, to 100 kbar, X-ray diffr. study 2=8811
AgClO₄·3C₂H₅O₂, and dioxane rot., from p.m.r. 4=1900
AgFeTe₂, 150° and 520°C 0=15961
Ag₂HgI₄, order-disorder transition, elec. cond. of both
phases 4=26105

Phase transformations—contd

AgI, α - β , rel. to optical band gap 2=23544
AgI, cubic to hexagonal transition, energy
barrier 4=30784
AgI, low-cubic to hexagonal, kinetics and
mechanism 4=23292
AgI, rel. to self-diffusion of Ag 2=18605
AgI, three polymorphs 1=17892
Ag-In-Ga system 2=4438
Ag-Mg solid solns., ordering, lattice spacing
changes 1=15161
AgNO₃, kinetics of phase growth 3=13401
AgNO₃, I=II, direct meas. of energy 2=16975
AgNO₃, from specific heat, ~433°K 4=15430
Ag-Sb-Te, AgSbTe₂, phase formation 3=18345
AgSbTe₂, at 410°K, rel. to elec. cond. and thermo-
e.m.f. 4=25868
Ag₂Se 2=573
Ag₂Se films, α - β 4=23291
Ag-Si system diagram, solid-liquid 4=5445
Ag₂Te 3=18384
Ag-Zn alloys, ζ - β transformations 1=1411
Ag-Zn, β , β' and ζ phases 2=21542
AgZn, heats of formation of three phases 3=1352
AgZn and AgCd, accelerated ordering and hardening by
thermal cycling 4=23289
Al, ageing of quenched metal 2=2409
Al bronzes, binary and ternary, kinetics of $\beta \rightarrow (\alpha + \gamma_2)$
transformation 4=4500
Al, grain refinement by transition metal additives 4=23241
Al, recryst. nuclei formation obs. 4=13474
Al-Ag alloys, ageing, effect of small additions of Cu
Mg, Zn 1=15148
Al-Ag alloys, G.P. zone formation and
miscibility 2=15067
Al-Ag, metastable miscibility gap obs. by cond.,
elec. 4=7474
Al-Ag, ordering inside Guinier-Preston
zones 3=8877
Al-Ag(8%) solid soln., crystal structure disintegration
under heat treatment 4=7678
Al-20% Ag with or without trace elements, aging, effect of
plastic deformation 4=23250
Al-B, Al-B-C systems 4=26640
Al-4% Cu alloy, ageing reactions, kinetics, effect of creep
deformation 4=23249
Al-Cu alloy, order-disorder transf. at 280°C 0=8270
Al-Cu alloys, ageing, role of vacancies 2=15066
Al-Cu solid solutions, matrix block struct.
changes 3=20906
Al-4% Cu with or without trace elements, aging, effect of
plastic deformation 4=23250
Al-CuAl₂, thin films, equil. diagram 2=21530
Al-Fe alloys, equil. diagram 2=2398
Al-Li (2.8, 1.5 wt. %), aging, electron microscope, hardness
obs., neutron effects 4=13472
Al-Mg alloys, decomposition kinetics during zone formation,
effect of vacancies 4=15729
Al-Mg(5%), age hardening enhancement by Ag 4=20696
Al-Mg-Si alloys, rel. to ageing 2=2331
Al-Mn alloys, intermetallic phases 1=1438
Al-1.2% Mn alloy, precipitation and recryst. 4=7473
Al-Mo, phase diag., changes at Al-rich end 4=13470
Al₂O₃-AlN systems 3=10985
Al₂O₃-GeO₂, new phases, 900, 1350°C 4=13475
 β -Al(OH)₃ to η -Al₂O₃, rel. to struct. 4=30844
 γ -AlOOH to γ -ad-S-Al₂O₃, rel. to struct. 4=30844
Al-Re, diagram, new phase ReAl₄ 3=20882
AlSb, to metallic form at high pr. 3=11211
Al-Si, ageing, effect of Mg 3=18355
in Al-Si eutectic, modification due to 1A elements 4=13476
Al-Si solid solutions, matrix block struct.
changes 3=20906
Al₂SiO₅ system at high temp. and press. 4=29002
Al-Tc, diagram 3=20882
Al-Zn alloy, ageing, natural, effect of a third
component 4=17752
Al-Zn alloys 0=2851
Al-Zn alloys, containing Si, Ge or Sn, isothermal ageing
after quenching 4=28994
Al-Zn alloys, Guinier-Preston zones, effect of d-
irradiation 4=23248
Al-Zn alloys, stress relaxation 4=17725

Phase transformations—contd

- Al-Zn, cooling depression of boundary, elec. cond. obs. 4=26544
 Al-Zn (10-98 wt. %), and heat cycling, effect on internal friction and elongation 4=13389
 Al-Zn, transition phase in ageing 1=15130
 Al-Zn-Mg alloys, isothermal ageing after quenching 4=28995
 Am, pressure-temp. -resistance props. 4=7500
 in Ar, liquid, under shock compression, rel. to inter-molecular potential 4=15388
 Ar, metastable hexagonal 4=23247
 As, up to 70 kbar 3=19067
 As₂Se₃, crystalline-vitreous, short-range order 3=10802
 As₂Se₃-As₂Te₃, crystalline (low-temp), vitreous 3=18364
 Au germanide, metastable phases, X-ray diffr. exam. 4=29833
 Au telluride, metastable phases, X-ray diffr. exam. 4=29833
 Au-Cu, order-disorder 1=12646
 Au-Cu system, complex phase 1=1407
 AuCu 3=10720
 AuCu, cubic to orthorhombic crystallography 1=2540
 AuCu, order-disorder transformation energy 1=2541
 AuCu, order variation rel. to temp. 2=10912
 Au₃Cu, order, effect of cold work 2=4462
 AuCu₃ films, ordering, temp. depend. 1=7893
 Au-Cu-Ni, order-disorder, X-ray diffr. obs. 4=7493
 Au-Cu-Zn, Martensitic, crystal structures, boundary theory 4=29008
 Au-Mn, martensitic 2=6820
 Au-Mn, new hexagonal phase between Au₄Mn and Au₃Mn 3=3312
 Au-Mn, order-disorder 1=12646
 Au₃Mn, ordering 4=7494
 Au-Ni alloys, precipitation, composition effects 4=20703
 B₂H₆, solid, at low temp. 0=1914
 BN, direct trans. of hexagonal to denser forms 3=11203
 Ba, b.c.c. → BaII 3=16834
 Ba, electronic, 5d, 6s levels, high pressure, calc. 3=23372
 Ba, high press., temp., from elec. cond. 4=16293
 Ba, at high pressure 4=4596
 Ba₂Bi₄Ti₅O₁₈, and substituted cpds, ferroelec. phase transitions 4=23255
 BaCl₂, from enthalpy var. with temp. 4=8501
 Ba(Nb,Ta)₂O₈-Sr(Nb,Ta)₂O₈ 1=6195
 Ba(NiW)₆O₁₉ 3=8864
 Ba-Pu oxide systems, crystal structure, atomic 4=7606
 BaS, vaporization rel. to thermodynamic props. 4=16501
 BaTiO₃, cubic-hexagonal 1=6486
 BaTiO₃, cubic-tetragonal, elastic energy 3=20769
 BaTiO₃, cubic-tetragonal, nucleation 3=4942
 BaTiO₃, cubic, tetragonal, orthorhombic 2=6523
 BaTiO₃, cubic to tetragonal transition 3=6816
 BaTiO₃, d. c. field effect, from e. s. r. of Fe²⁺ 4=10324
 BaTiO₃, displacive, due to neutron irradiat. 4=26564
 BaTiO₃, effect of added Co 4=30807
 BaTiO₃, effect of isomorphous replacement of Ti ions 2=14633
 BaTiO₃, elec. field effects, optical transmission study 0=20958
 BaTiO₃, ferroelec. nucleation, field induced 3=4943
 BaTiO₃, tetragonal-cubic 0=548
 BaTiO₃, tetragonal to cubic, effect of grain size 3=8792
 BaTiO₃, tetragonal-cubic, X-ray induced 4=15730
 BaTiO₃, theory 1=1134
 BaTiO₃-BaHfO₃, from Σ /T meas. 2=4359
 BaTiO₃-BaSnO₃ solid solutions, at high temp. 0=12076
 Be, allotropic transf. due to plastic deformation 0=3170
 Be films, condensed on cold substrates 1=15179
 Be hydroxide, allotropic, light-dark 4=7475
 Be, internal friction study 2=21544
 Be, at 93 and 55 kbar at 25°C 4=10022
 Be-Fe alloys 3=11290
 Be-Ni (8 at. %), diffusionless $\beta \rightarrow \alpha$ for rapid cooling 4=23254
 BeO, high temp. polymorph 3=1320
 BeO, 2100°C 3=2818
 Bi, allotropic transf. due to plastic deformation 0=3170
 Bi, diagram for pressures up to 30 000 kg/cm² 1=11581
 Bi, effect of Sb and Pb impurities, under pressure 3=25751
 Bi, up to 50 kbar and 500°C 4=26568
 Bi, high press., low temp. 2=7482, 9483

Phase transformations—contd

- Bi metal, to 40 kbar 1=9090
 Bi, phase diagram, up to 10⁵ kg/cm² and 500°C 2=23872
 Bi, press.-induced polymorphs, structural and transform characts. study 4=30795
 Bi, pressure-temp.-resistance props. 4=7500
 Bi, up to 70 kbar 3=19067
 Bi, strain-induced at low temperatures 0=18379
 Bi, supercooling 2=4447
 Bi-Ca-Mg system 2=21538
 BiFeO₃, ferroelec., Curie temp. det. 2=2205, 4090
 BiFeO₃, 700°-800°C 3=20770
 BiFeO₃-LaFeO₃, dielectric, diagram 4=4214
 BiFeO₃-Sr(Sn_{1/2}Mu_{1/2})O₃, antiferromag., and Sn¹¹⁹ Mossbauer change 4=15658
 BiFeO₃-SrSnO₃, 4 solutions, ferro to paraelectric, from Mossbauer effect, temp. var. 4=4212
 Bi₂O₃-Nb₂O₅ systems meas. 3=6813
 Bi-Pt alloys between PtBi and PtBi₂ 3=11280
 Bi₂Rh, diagram revision 2=4448
 Bi-Se, double layers 2=4355, 6759
 Bi-Sn(50/50), high press., melting pt. obs. 4=20697
 C black, graphitization 2=6763
 C films, graphitization 3=13395
 C films, graphitization and deformation 4=15731
 C films, graphitization, structure meas. 4=23263
 C graphitization, diamag. suscept. obs. 4=26546
 C, graphitization of polymers 4=23264
 C graphitization, X-ray obs. 4=26547
 C, new phase above 150 kbar 3=18229
 C, pyrolytic, high temp. graphitization 4=7476
 C steel, martensitic, coherent rearrangement of lattice 2=23875
 CF₄, solid, to 20 000 kg/cm² 0=14042
 (CH₃)₄NCl, thermodynamic data 2=14381
 CH₄, CD₄, solid, 0-19 000 kg/cm², 4-120°K 0=12055
 CO₂, electrical effects 0=8977
 CO₂-H₂O, two phase region, up to 3500 bar 4=8508
 CS(NH₄)₂, ferroelectric and specific heat, anomalous 4=1399
 Ca, $\alpha \rightleftharpoons \gamma$, alloying addns. effects 2=23878-9
 Ca perovskite-type cpds., ferroelectric and puckering transitions 0=13654
 CaCO₃, high-press phases I, II, III and KNO₃-IV type 4=30799
 CaCO₃, to 100 kbar, X-ray diffr. study 2=8811
 Ca-CaH₂, phase system 2=2405
 Ca₃GeO₈, temps., by thermal analysis 3=23373
 β -Ca₃(PO₄)₂, at low temps. 0=8011
 CaS, vaporization rel. to thermodynamic props. 4=16301
 CaSiO₃:Mn:Pb 0=3267
 Ca₂SiO₃, room temp. to 1100°C 4=29100
 Ca_{0.16}Zr_{0.84}O_{1.84}, isothermal grain growth 4=13644
 Cd oxide pressed powders with excess Cd or O, between impurity and lattice scattering 3=22940
 Cd-Mg alloys, and composition 4=20699
 Cd-Mg alloys, kinetics 1=12645
 Cd-Mg alloys, order-disorder 3=16103
 Cd-Mg-In alloys, and composition 4=20699
 CdS, 18 to 35 k bars 4=4502
 CdS powder, $\beta \rightarrow \alpha$, temperature 4=7477
 CdSe, polymorphic, at 0-50 kbar 3=16016
 Cd₂SiO₄, high press., olivine-spinel 4=30797
 Cd-Sn alloys, ordering 1=15141
 Cd-Te system, rel. to semicond. props. 2=19089
 CdTe, polymorphic, at 0-50 kbar 3=16016
 CdTe-In₂Te₃, peritectic compounds, semiconducting props. 4=6950
 CdTe-In₂Te₃ pseudo-binary system, peritectic transformations 4=7478
 Ce 1=15124
 Ce, allotropy at high press. 4=26560
 Ce, $\alpha - \alpha'$, diffusion on increasing temp. and press. 4=4503
 Ce, existence of critical point, study to 20 000 atm and 575°K 1=14938
 Ce, $\gamma \rightleftharpoons \alpha$, crystal struct. meas. 2=17041
 Ce, $\gamma \rightarrow \beta$, at high deformations in rolling at room temp. 4=13656
 Ce, Hall coeff., effect 2=18640
 Ce, at high pressures 1=3957
 Ce at high pressures 1=10205
 Ce, magnetic order-disorder and thermal expansion, low temp. anomalies 4=15433

Phase transformations—contd

- Ce, I-II, rel. to crit. end point 4=17757
 Ce, polymorphic, under pressure 1=10226
 Ce, spin effects on electronic configuration 1=7551
 Ce, transformations and structures 1=2518
 Ce, 20-350°C, up to 80×10^3 kg/cm² 3=16014
 Ce—Cu phase diagram, by differential thermal analysis and metallography 4=30800
 Co, f.c.c.—h.c.p. transformation 0=18374
 Co films, 0-500°C, elec. cond. study 1=14367
 Co, 6H₂O²⁺ trigonally distorted complex, below 90°K 4=28307
 Co, thin films 2=2425
 Co, thin sections, h.c.p. to f.c.c. obs. by electron diffraction and microscope 3=1351
 Co whiskers, f.c.c. \leftrightarrow h.c.p. martensitic transformation 4=23258
 CoCl₂·6H₂O, para- to antiferromagnetic, proton resonance obs. 4=20610
 Co and Co—Ni, f.c.c.—h.c.p., natural and stress induced 0=16311
 Co and Co—25% Ni, martensitic 0=21207
 Co—Mn oxide spinels 2=6760
 Co—Ni alloys, h.c.p. to f.c.c. electron diffract. and microscope observation 3=1351
 Co₃O₄—Mn₃O₄ system, composition—activity curves, free energy of mixing and of CoMn₃O₄ formation 4=22517
 Co—Pt, ordering, lattice distortion, X-ray exam. 4=23260
 Co—Se, monoselenide to diselenide 4=7480
 Co—Sn, mag. props., temp. var. 4=4327
 Co V, order—disorder, near 550°C 4=23259
 Co—W, elastic modulus and damping decrement 4=17727
 Cr, ductile—brittle, rel. to fracture 4=23135
 Cr, high temp. search 4=23261
 Cr, 113°—373°K 4=29104
 Cr spinel systems 3=16018
 Cr spinelides, rel. to calcination 3=16081
 Cr—steels, austenite—martensite transformation effect of irradiation 1=4005
 Cr, 200°C, X-ray obs. of no anomalous thermal exp. 4=20700
 CrCl₃, at 240°K 4=17808
 Cr—Fe alloy, electron shift, X-ray evidence 1=20585
 Cr—Fe, high temps., X-ray diffr. obs. 4=7479
 Cr—Fe system, thermodynamics 1=2539
 CrI₂, high temp. search 4=23261
 CrK alum, P_r²—T curve and colour transitions 4=28761
 Cr K sulphate alum, 192.5°K 4=29006
 Cr—Nb—Ni system 3=5119
 Cr—Ni alloy, ordering, effect of quenching temp. 0=8271
 Cr—Ni, high temps., X-ray diffr. obs. 4=7479
 Cr—Ni system, equil. diagram 3=11289
 Cr—Si—O system at low O pressures 4=24434
 Cr—Ti alloy, β — α , high-vacuum and high-temp. X-ray camera 0=13972
 Cr—Ti alloys, electron microscope examination 1=1416
 Cs, allotropic transf. due to plastic deformation 0=3170
 CsCl, b.c.c.—f.c.c. 2=12449
 CsI, at 469°C, X-ray investigation 4=23257
 CsI, to metallic state, calc. 2=6761
 CsNO₃, with absence of ferroelectricity, mechanism 4=4202
 CsNO₃ transition energy, direct meas. 0=18372
 CsPb chloride, tetragonal to cubic 2=19029
 Cu, critical pt. density, pressure, internal energy relationship 4=25849
 Cu, crystal texture, var. with rolling temp. 4=7481
 Cu films, condensed on cold substrates 1=15179
 Cu oxinate 3=18257
 Cu phthalocyanine 3=18257
 Cu, polygonization, rel. to impurities 3=20897
 Cu salicylate, crystal, mag. different 3=23374
 Cu—Ag(1.8-5.1%), ageing, effect of Sb, Be additions 4=13484
 Cu—11.9% Al alloy, isothermal ordering 2=23881
 Cu—Al alloy, ordering, effect of quenching temp. 4=1984
 Cu—Al alloy, ordering kinetics, incompleting long-range order 4=1986
 Cu—Al alloy, ordering, rel. to quenching temp. 3=18349
 Cu—Al alloy, ordering, vacancy formation 4=1987
 Cu—Al alloys, ordering, effect of P additions 4=1985
 Cu—Al alloys near solubility boundary, ordering 3=5132
 Cu—Al (14.3 at.%), order increase on low deformation 4=7487
 Cu—Al, low-temp. μ -phase (near Cu₃Al), structure 4=7617

Phase transformations—contd

- Cu—Al, ordering 2=23882
 Cu—Al, short-range order 4=1988
 Cu—Al solid solns., ordering kinetics, theory 4=7484
 Cu—Al solid solns., short-range order, temp. depend. 4=15723
 Cu—Al and Cu—Ga, order—disorder on heating 4=6741
 Cu—Al—Ni, martensitic, lattice reorientation 4=13483
 Cu(78)—Al(14)—Ni(8), martensitic, with increased strain under stress 4=20702
 Cu—Au alloy, order—disorder, X-ray study 2=17046
 Cu—Au system, antiphase structures 4=13485
 CuAu, growth of ordered regions 3=8902
 CuAu, order—disorder, internal friction peak 4=26511
 CuAu₃, ordering, X-ray study 2=4461
 Cu₃Au alloy, order—disorder, kinetics, two ordering processes 4=7489
 Cu₃Au alloy, ordering process, elec. data 3=3330
 Cu₃Au alloy, ordering process, Hall effect data 3=3331
 Cu₃Au, equilib. states of resist. at 600°C 2=2110
 Cu₃Au, kinetics of ordering 3=20889
 Cu₃Au, local ordering at low temps. 4=26548
 Cu₃Au, order—disorder, internal friction peak 4=26511
 Cu₃Au, ordered and disordered, elastic const., 4.2—300°K 1=20284
 Cu₃Au, ordered, disordering by particle bombard. 3=4895
 Cu₃Au, ordering, influence on Hall effect 3=839
 Cu₃Au, ordering kinetics, X-ray obs. 3=13529
 Cu₃Au, ordering, nucleus formation and growth 4=7488
 Cu₃Au, ordering rate, effect of quenched-in vacancies 4=15732
 Cu₃Au, ordering, thermoelec. meas. 3=25753
 Cu₃Au, ordering, type II antiphase boundaries 4=7490
 Cu₃Au superlattice, off-stoichiometric 3=13495
 Cu₃Au type alloy, ordering effect on resistivity, theory 1=19827
 Cu₃Au type superlattice alloys, ordering 4=7483
 CuAuI, ordering 2=6829
 CuAu(I)—CuAu(II) superlattice transition 0=21212
 Cu—Be, aged, orientations of new phases 3=16099
 Cu—Be alloy, elastic oscill. damping effect 4=13403
 Cu—2% Be alloys, ageing, structural changes 4=7482
 Cu—Be system, β transformations 4=7486
 CuBr, T—P curves of transitions 1=8986
 CuCl, T—P curves of transitions 1=8986
 Cu—3%Co, rel. to precipitation hardening 3=20898
 CuFe₂O₄, cubic—tetragonal, from Müssbauer effect 3=11205
 CuFe₂S₃, polymorphic, rel. to mag. props. 3=11049
 Cu—In alloy, elastic oscill. damping effect 4=13403
 Cu₂MnAl alloy, partial disordering at high temp. 2=21551
 Cu₂MnSn 1=15132
 Cu[(NH₄)₂SO₄]₂·6H₂O, at 67°C, with change of structure 1=14936
 Cu—Ni alloys, "microheterogeneous" condensation 2=4449, 8843
 Cu—Ni, powder to alloy homogenization progress, X-ray diffr. obs. 4=26550
 Cu—Ni—Al alloy, martensite transformation 4=17755
 Cu—Ni(6-10 wt.%)—Al(1.5 wt.%), Ni₃Al separation at 880°C 4=26551
 Cu₃Pd, order—disorder, internal friction peak 4=26511
 CuPt₃, order—disorder, internal friction peak 4=26511
 Cu—Si alloy, $\alpha \rightarrow \kappa$ transf., role of vacancies 3=1353
 Cu—Si—(Mn) alloys, rel. to deformation and annealing 3=22701
 Cu—Sn alloy, β'' — β reverse martensitic, heating rate effect 4=7491
 Cu—Sn alloys, optical studies 0=1718
 Cu—Sn, Cu—Sn—Pu, neutron irradiat. 2=12926
 Cu—Sn, γ -phase, natural ageing process 4=23256
 Cu—Ti, ageing, plastic deformation 1=15136
 Cu—Ti alloy, rel. to plastic deformation 3=5126
 Cu—Ti alloys, Cu₃Ti precipitation 0=21228
 Cu—Ti alloys, during ageing 1=1412
 Cu₂XY₂, (X = Ge or Sn; Y = S, Se or Te), ordering and superstructure 4=2066
 Cu—Zn alloys, order—disorder transformation 4=17756
 Cu—Zn alloys, change in X-ray diffr. pattern due to disorder—order transformation 4=17756
 α Cu—Zn, ordering energy, thermal meas. 4=10423
 CuZn β , order parameters near transit. temp. 2=15059

Phase transformations—contd

- β -CuZn, order-disorder, neutron diffr. study 3=16105
 β -CuZn, ordering, effect of long-range interactions 4=13482
 Cu-Zn, γ -phase transitions 4=13481
 Cu-Zn-Cd, diagram, section 500°C, 100-35% Cu 3=8898
 Dy, ferro- and antiferromagnetic, exchange interaction mechanism 3=20573
 Dy, 50-kilobar transition, nature 4=30849
 Dy, paramag.-antiferromag. transition, pres. effects 3=20552
 Fe, A₁ and A₂, heats meas. 3=10598
 Fe alloy, with Al, C, Ni, S, Si, diffusion 0=8268
 Fe alloys, liquidus-solidus curves 4=24430
 Fe alloys, thin-film martensite transformation 0=21209
 Fe, α - γ , detection using differential thermal cond. anal. 0=14043
 Fe, α - γ , rel. to energy loss in electron scattering 3=2040
 Fe, α - γ , γ - δ , wires, plastic deformation, irreversible 3=23471-2
 Fe, α = γ interface 3=13494
 Fe, α \rightarrow γ transition, elec. resistivity meas. 4=30611
 Fe, α - γ , twinning and atomic matching 2=8842
 Fe, b. c. c. to h. c. p. at 130 kbar room temp. 4=30802
 Fe-base alloys, paramag. range, ordering 2=23635
 Fe carbides, X-carbide-cementite, 350°-550° C 4=7499
 Fe, rel. to deformation 4=28960
 Fe, dispersion-strengthened, A₃ transform. 2=23868
 Fe, elec. cond. at high press. 2=8276
 Fe, rel. to elec. resistivity 1=17607
 Fe, f.c.c. and b.c.c., lattice stability 3=13523
 Fe films, condensed on cold substrates 1=15179
 Fe foils, martensite, by optical microscopy 3=8890
 Fe, γ - α change point, length change meas. apparatus 0=14572
 Fe, martensite-ferrite, thermodynamics 3=5120-3
 Fe, martensitic, on rapid quenching 4=13495
 Fe, shock-wave induced, 130 kbar 2=23846
 Fe, strength during allotropic transformation 4=23266
 Fe, technical, strain-ageing meas. 4=13415
 Fe, torsion at 700°-1250°C 3=6857
 Fe, from velocity, acoustic waves, up to melting temp. 4=15413
 Fe, X-ray diffr. study, to 100 kbar 2=8811
 Fe-Al alloys 4=15441
 Fe-Al alloy, atomic order rel. to elastic modulus 3=25605
 Fe-Al alloys, liquidus-solidus relations 0=6383
 Fe-Al alloys, ordering rel. to yielding 4=28959
 Fe-Al alloys, short range order coeffs. 3=13505
 Fe-Al, order-disorder reaction 4=6854
 Fe-Al, ordering kinetics 3=3327
 Fe-Al solid solns., ordering, theory 3=6871
 Fe₃Al alloy, neutron radiation disordering 4=20707
 Fe₃Al, mag. and elec. props., equilb. diag. 3=3326
 Fe₃Al, ordering 4=4473
 Fe₃Al superlattice, martensitic 3=16102
 Fe-Au alloys, A₁, temp. 3=11285
 Fe-3.8% Au solid solution, plates to particles 3=8882
 Fe-C alloys, austenite, isothermal, pressure effects 3=11286
 Fe-C, irradi., C precipitation, kinetics 4=15735-6
 Fe-C, martensitic transform., effect of press. 2=8841
 Fe-1.2% C-12.5% Mn, martensite formation 4=17760
 FeC₂O₄·2H₂O, antiferromagnetic, from Mössbauer effect 4=9812
 Fe-Co alloy, order-disorder transition, neutron diffr. study 4=1994
 Fe-Co alloys, order-disorder 3=1355
 Fe-Co alloys, order-disorder 3=13506
 Fe-Co alloys, ordering processes rel. to recrystallization 4=26598
 Fe-Co alloys, ordering, recrystalliz. 3=11296
 Fe-Co alloys, ordering and recrystallization 4=1993
 Fe-Co alloys, rel. to Young's modulus and magnetization 1=20302
 Fe-Co, order-disorder, neutron diffr. exam. 3=23478
 Fe-Co-V alloys, α - γ transformation 1=6532
 Fe-Co-V alloys, annealing, elec. cond. 4=1992
 Fe-Cr alloys, rel. to elec. resistivity 1=17607
 Fe-Cr, α - γ , elec. cond. and thermo. e.m.f. 2=23234
 Fe-Cr-C, austenite-martensite 3=18346

Phase transformations—contd

- Fe-Cr-Ni alloy films, f.c.c. to h.c.p. and b.c.c. 3=23474
 Fe-Cr-Ni alloy, martensitic transform. 2=23870
 Fe-Cr-Ni alloys, martensitic 3=20883
 Fe-Cr-Ni, martensitic, association of hcp and bcc. 4=20709
 Fe₃Cr, order-disorder, 1000°-1150° C 4=10427
 Fe-Cu alloys, resistance to deformation 1=15137
 Fe-Ge alloys, β -phase homogeneity 4=29118
 Fe₃Ge 4=1833
 Fe-Ir alloys, A₁, temp. 3=11285
 Fe₃LiO₈, order-disorder, radiocrystallog. study 4=26555
 Fe-Mn alloy, γ \rightleftharpoons ϵ transformation, effect of Mo and W 4=10426
 Fe-Mn alloys, effect of plastic deformation 4=13493
 Fe-Mn alloys, martensitic transf., rel. to internal friction 1=1305
 Fe-Mn, ϵ -phase formation, kinetics 4=23272
 Fe-Mn(< 7%), δ liquidus and solidus meas. 4=24431
 Fe-Mn-C foils, martensite nucleation 3=23475
 Fe-Mn-C, martensitic transition, multilayer structure 4=13494
 (Fe, Mn)₃C, (cementite), precipitation from austenite 4=15734
 Fe₃N and Fe₄N, precipitation from ferrite 4=15734
 Fe-Ni alloys, effect of pressure and heat treatment 1=6531
 Fe-Ni alloy in fine particles 3=8897
 Fe-Ni alloys, γ - α - γ , rel. to H permeability 3=18344
 Fe-Ni alloys, Invar type, mag. transforms. and elasticity 3=25607
 Fe-Ni alloys, martensitic 0=21208, 21210
 Fe-Ni alloy, martensitic 3=20883
 Fe-Ni alloys, order-disorder 3=1355
 Fe-Ni alloys, rel. to plastic deformation 4=17763
 Fe-Ni alloys, resistance to deformation 1=15137
 Fe-Ni alloy, reverse martensitic, structure 3=20866
 Fe-Ni, austenite-martensite, by compression 2=10781
 Fe-Ni, austenite-martensite, under high pressure 4=23267
 Fe-Ni, Cr, Si, diffusionless, $\gamma \rightarrow \alpha$ 2=8840
 Fe-Ni 50/50% alloy, ordering by neutron bombard. 2=6830
 Fe-Ni (50-50), order-disorder, by n irradi., from elec. cond. 4=7496
 Fe-Ni films, martensitic transform. 3=20884
 Fe-Ni foils, martensite nucleation 3=23475
 Fe-Ni, martensite burst transform., mechanism 4=7495
 Fe-Ni (1-10%), on rapid quenching 4=13496
 Fe-Ni, order-disorder 4=1457
 Fe-Ni, order-disorder transition 3=8900
 Fe-Ni (70/30), austenite to martensite, u.s. study 1=7813
 Fe-Ni system, high-pressure, phase diagrams 2=2399
 Fe-Ni (23.7%)-Mn (2.8%), martensitic 2=23873
 Fe-Ni (22.5%), effect of alloying elements 4=7496
 Fe₃Ni, order-disorder 2=4465
 Fe-Ni-Al solid solution, decomposition, initial stage 3=20909
 Fe-Ni-C alloy, martensitic transformation rel. to plastic deformation 4=17764
 Fe-Ni-C alloy, resistivity changes, voltage signals 2=4451
 Fe-Ni-Mn alloys, antiferromag. ordering 3=13284
 Fe-Ni-Ti, reverse martensitic transform, mech. props. 4=23167
 Fe-Ni-V, reverse martensitic transform, mech. props. 4=23167
 FeO₂, iron-magnetite-wüstite diagram, $1 \leq x \leq 1.2$ 4=26559
 FeO, by X-ray exam. 3=11200
 Fe₂O₃, $\gamma \rightarrow \alpha$ phases, theory 3=11204
 Fe₂O₃, $\gamma \rightarrow \alpha$ with pressure 0=18376
 Fe₂O₃, melting relations, Cr₂O₃ effect at low O₂ press. 4=14453
 Fe₃O₄, low-temp., Mössbauer effect study 4=4510
 Fe₃O₄- γ -Fe₂O₃- α -Fe₂O₃, mag. and dielectric props., 10^2 - 4×10^9 c/s 3=18071
 FeO-SiO₂-CaO melts, temp. and composition depend. 0=18163
 Fe-Os alloys, A₁, temp. 3=11285
 Fe-P (0.5-13% wt.), diagram 4=13491
 Fe-Pt alloy, press. effect on Curie temp. 4=20711
 Fe-Rh alloys, Fe⁵⁷ Mössbauer effects 3=17632
 FeS, α -transformation, susceptibility anomaly 0=18209

Phase transformations—contd

- Fe-Si alloys, A_3 point, volume change 3=10602
 Fe-Si alloys, $\alpha = \gamma$, effect of volume changes 3=5124
 Fe-Si alloys, ordering, Fe sites study 3=8335
 Fe-Si alloys, ξ -phase, eutectoid 3=6859
 Fe-3%Si, directional ordering by magnetic annealing 3=15804
 Fe-Si, high pressure, var. with Si content 4=7497
 Fe-Tc alloys, A_4 , temp. 3=11285
 FeTiO₃-Fe₂O₃, order-disorder, rel. to reverse thermo-remnant mag. 3=13255
 Fe-V alloy, electron shift, X-ray evidence 1=20585
 Fe-Zn alloys, α -phase boundary 4=26654
 Ga, elec. cond. anisotropy 0=9930
 Ga II-III, polymorphic at high press. 3=6814
 GaSb, to metallic form at high pr. 3=11211
 Ga-Te system 1=15134
 Gd, high press. 4=15733
 Ge, antiferromagnetic, n-type, heavily doped 3=23135
 Ge, epitaxial films, amorphous-cryst. 3=3280
 Ge epitaxial films, polycrystalline-single crystal 4=10486
 Ge, at high pr. metallic modifications 3=11210
 GeO₂, kinetics, 800°-1200°C 3=13400
 GeS-S-SnS system 4=26552
 GeTe-PbTe, solid soln. 2=17055
 GeTe-SnTe alloys, rhombohedral-cubic 3=13524
 GeTn-SnTe, solid solns. 2=17055
 H, solid, second-order transitions 3=6450
 H₂, conditions for existence of momatomic phase 0=15767
 HCl, HBr, solid phases under press. 2=4357
 HCN, between 77-195°K, study by N¹⁴ pure quadrupole resonance 0=6283
 pH₂-oD₂, solid system, separation, from vapour press. at pH₂ triple point 4=20705
 H₂O, adsorbed in porous Vycor glass, from expansion 4=10630
 H₂S, solid 3=1325
 H₂S, solid, rel. to structure 4=20706
 H₂S, solid, to 20 000 kg/cm² 0=14042
 He, liquid, boundaries between phases 0=8921
 He, liquid, λ , and specific heat logarithmic var. 4=21370
 He liquid, λ -transition 4=8543
 He, liquid, 2nd kind transitions, theory 4=16312
 He, solid, transit. to metal state at high press. 2=22109
 He II, λ -point drag forces 2=1328
 He α , β - γ transform. in solid 2=7493
 He³, h.c.p. allotrope at high press. 1=13039
 He³, liq., near melting curve 2=15834
 He³, liquid, transition predicted 0=12548
 He³, solid, α - β 2=15842
 He³,⁴, solid, hcp-bcc 3=16853
 He³, solid, rel. to thermal cond. 0=19545
 He⁴, liquid, λ transformation, thermodynamic props. 4=27405
 He⁴, liquid-vapour and liquid-solid mixtures, Ehrenfest eqns. 0=14914
 He⁴, solid, α - γ 2=15830
 He⁴, solid β and γ forms 1=8279-80
 He⁴, solid, with liq, He⁴II, rel. to thermal props. 3=1888
 He³-He⁴ diagrams 4=18508
 Hf, h.c.p. \rightarrow b.c.c. rel. to elastic moduli 4=26530
 Hf, at high pr. 3=13451
 Hf-Al-Si system 2=17045
 Hf-H system 2=23808
 HfO₂, monoclinic-tetragonal 3=25654
 HfO₂, monoclinic-tetragonal, diffusionless 4=13509
 Hg, liquid- α and α - β , under pressure 3=18227
 Hg, solid, $\alpha \rightarrow \beta$ transform. 2=14915
 HgS, on cooling after vapour phase growth 2=16976
 HgSe, high press., from elec. props. 4=23278
 HgSe, high-pressure 3=3253
 HgTe, polymorphic, at 0-50 kbar 3=16016
 HgTe, resistivity change rel. to pressure 1=14473
 HgTe-In₂Te₃ alloy, rel. to semicond. props. 4=22719
 I₂, first order, by shock waves, diatomic bond destruction 0=15767
 In, fusion curves to 10⁵ atm 0=9840
 In, supercond., edge effect elimination 4=24502
 In supercond. films, 2nd order, mag. field effects 4=29835
 InAs, to metallic form at high pr. 3=11211

Phase transformations—contd

- InAs-In₂Se₃, homogenization, by annealing under pressure 0=1939
 InP, to metallic form at high pr. 3=11211
 In₂S₃, vacancy ordering, 420° C, direct obs. 4=13489
 InSb 3=20771
 InSb, h.p. transition 4=17758
 InSb, metallic form 3=13517
 InSb, to metallic form at high pr. 3=11211
 InSb, solid 1=18678
 InSe, amorphous, short-range order meas. 3=13515
 In-Sn alloys, supercond. order, from magnetization 4=18576
 In-Te, diagram in In₂Te₃ region 2=10917
 InTe (II), metallic, stability conditions 4=10428
 In₂Te₃, $\alpha = \beta$ 1=4065
 In₂Te₃ solid solns. with A^{II}B^{VI} tellurides, ordering 1=20621
 K, elec. cond. rel. to pressure over 500 kbar 4=1559
 K halides, polymorphic transition, optical observations 0=16037
 K, residual resistance 0=20870
 (K_{0.5}Bi_{0.5})TiO₃, 270° and 410° C 3=20851
 KBr, high-pressure, from compressibility, shock 3=18179
 KBr, rel. to press., transparency meas. 2=23803
 KBr-KCl, solid solns., kinetics 2=23799
 KCl, high-pressure, from compressibility, shock 3=18179
 KCl, polymorphic, press. effect calc. 2=14922
 KCl, rel. to press., transparency meas. 2=23803
 KCl, X-ray diffr. study, to 100 kbar 2=8811
 KCN, interdomain symmetry in reversible transformations 1=7834
 KCN, temp. cycling at thermal transformation, \sim -110°C, domain co-existence 0=21196
 K(Cr, Al) alums, optical study 1=7710
 K₂CrO₄, up to 100 kb 3=25655
 K₂Cr₂O₇, up to 100 kb 3=25655
 K₄Fe(CN)₆·3H₂O 1=11351
 K₄Fe(CN)₆·3H₂O, ferroelectric and specific heat, anomalous 4=1399
 KH₂PO₄, and optical harmonic prod. anomaly 4=4269
 K-Hg 2=21549
 KMnO₄, up to 100 kb 3=25655
 KNO₂, solid at 40°C, hysteresis shown by dilatometric methods and u.v. spectroscopy 4=7510
 KNO₃, calorimetric meas., polymorphic transforms. 2=14920
 KNO₃, high-pressure polymorphs, rates 3=20772
 KNO₃, transition at 130°C, thermal cond. decrease 1=9991
 KNO₃, I=II, direct meas. of energy 2=12878
 KPF₆, first-order transition, calorimetry 3=12927
 La, allotropy at high press. 4=26560
 La, pressure-temp.-resistance props. 4=7500
 LaAlO₃, to cubic phase, e.s.r. data 3=11112
 Li, allotropic transf. due to plastic deformation 0=3170
 Li, b.c.c. to h.c.p., low-temp. mag. susceptibility change 1=1193
 Li, Li-Mg, martensitic, elec. resist. 2=6411
 Li, at low temp., deformation-induced, dilatometric study, rel. to elastic props. 4=10430-1
 Li, elec. cond. rel. to pressure over 500 kbar 4=1559
 Li, martensitic transform. in 30°K range 4=6745
 Li, martensitic transformation, spec. ht. study 0=7852
 LiFeO₂, polycrystalline powder, order-disorder process 4=30803
 LiH, polymorphic, press. effect calc. 2=14922
 LiGaO₃, disorder, above 1140°C 4=2080
 LiH, metallic, high pressure, calc. 4=10432
 LiI, effect on u.v. absorption 0=10038
 Li-Mg alloys, martensitic, rel. to elastic consts. 3=5125
 Li-Mg, sp. ht., martensitic transform. 0=2787
 Li(N₂H₄)SO₄ 4=1902
 Mg pyrophosphate, at 342.2°K 4=9860
 Mg₃B₂O₁₃, crystal symmetry, and absence of ferroelec. 4=4201
 Mg-Bi-Sn, thermal and metallographic study 2=21539
 MgCd, disorder-order 2=15060
 Mg-Cd alloys, order-disorder transformation 3=23479
 Mg-Cd alloys, ordering kinetics 4=7503
 Mg-Cd system, order-disorder, and creep 4=26519
 Mg₂Cd, order-disorder, dilatometric obs. 4=23277

Phase transformations—contd

- Mg₃Cd, ordering kinetics 4=1995
 Mg₃Cd, superlattice formation, and 2-phase, ordered-plus-disordered region 4=23176
 Mg-Fe ferrite, ordering, on heat treatment 4=13241
 MgGa₂O₄-MgMn₂O₄, 850° C 4=15740
 MgMn₂O₄, cation migration process meas. 4=26052
 MgMn₂O₄, "normal-random" change 2=14923
 MgMn₂O₄-MgAl₂O₄, tetragonal-cubic spinel transformation 1=20556
 Mg₂Si, cubic to hexagonal transform., temp.-press. conditions above 900°C and 25 kbars, 15% density increase 4=30804
 Mn, electrodeposited, X-ray study 1=1413
 Mn ferrite, -75°C, elec. props. study 1=14381
 Mn steel, $\gamma \rightarrow \epsilon$, plastic deform. effects 2=23876
 Mn steel, low C content, dissolution and formation of Nb carbide, kinetics 4=7506
 Mn-Al, ferromag. π , ϵ and β phases 2=21541
 MnAs, to ferromag., first-order 3=13226
 MnAs, first-order transition 3=15753
 MnAu₂, ferro-antiferromagnetic, exchange interaction mechanism 3=20573
 MnBi, order-disorder, and mag. props., heat treatment effects 4=1798
 MnBr₂·4H₂O 0=16144
 MnCl₂·4H₂O 0=16144
 MnCl₂·4H₂O, heat capacity anomaly at 1.6J°K 1=12356
 Mn-Cu alloys, aged, f.c.t. \rightleftharpoons f.c.c. 2=12737
 Mn-Fe alloy with and without Cr, Ni, and Mo, $\gamma \rightarrow \epsilon$ transformation, stabilization 4=20712
 MnHg, crystal distortion and magnetic transition, -75°C 3=6860
 MnO₃, γ - β transform., X-ray study 3=23376
 Mn-Pt alloys 4=26315
 MnRh ordered alloy, cubic-tetragonal charge 3=15752
 MnSe, Ag doped 2=19086
 MnTe, fictitious, crystal structure, high temp. 3=23469
 Mn-Ti alloys, electron microscope examination 1=1416
 Mn-Ti, β - to α - and w- phase transformation 1=10270
 Mn-Zn ferrites, effect of Ti addition 4=7502
 Mn₃O₄-MgAl₂O₄, tetragonal-cubic spinel transformation 1=20556
 Mn₂Sb, Cr-modified, ferrimag. to antiferromag. transition, neutron diffr. study 1=1242
 Mo, ductile-brittle, pressure effect 4=23276
 Mo oxides, 500-870°C 0=18345
 Mo-Permalloys K formation and mag. and elec. props. 4=26316
 MoO₃ 1=9110
 MoO₂-MoO₃ system, crystal structure, atomic 4=7631
 Mo-Re alloys, supercond., mag. and resistive 4=18586
 Mo-Ti, β - α , habit planes and orientation 0=16312
 N, critical opalescence, X-ray scatt. obs. 4=29676
 N¹⁴ in ethylenediamine crystals, at 180°K and liq. N₂ temp. from n.q.r. 4=7359
 NH₄ fluoroberyllate, -100°C 3=17981
 NH₄ halides, high pressure 1=9099
 (NH₄)₂BeF₄, ferroelec., n.m.r. data 2=10711
 (NH₄)₂BeF₄, ferroelec. phase transition 3=17941
 (NH₄)₂BeF₄, ferroelec. transit. 2=14916-17
 NH₄Br, modifications II and III, X-ray meas. 4=23419
 NH₄Br, I \rightleftharpoons II, differential calorimetric meas. 0=16334
 NH₄Br, I \rightleftharpoons II, dilatometric investigation 0=16335
 NH₄Cl, I \rightleftharpoons II, differential calorimetric meas. 0=16334
 NH₄Cl, I \rightleftharpoons II, dilatometric investigation 0=16335
 NH₄Cl, I \rightleftharpoons II, X-ray study 3=6810
 NH₄Cl-MnCl₂-H₂O solid solns., e.s.r. of Mn²⁺ 4=28875
 NH₄F 1=7833
 NH₄F, f.c.c. \rightarrow b.c.c., rel. to temp. and pressure 4=13478
 (NH₄)₂H₃IO₆, ferroelec., n.m.r. data 2=10711
 NH₄H₂PO₄, rel. to dielectric props. 2=18766
 NH₄HSO₄, ferroelec., n.m.r. data 2=10711
 NH₄HSO₄, ferroelectric and specific heat, -2.55°C 3=20101
 NH₄I, I-II transition energy and temp., direct meas. 4=26545
 NH₄NO₃, crystalline, study by i.r. spectroscopy 4=10419
 NH₄NO₃, dielectric observation, -100° to 130°C 1=1356
 NH₄NO₃, at 125.8°C and 84.1°C 0=17899
 NH₄PF₆, 20°-300°K, calorimetric data 3=12927
 (NH₄)₂SO₄, ferroelec., n.m.r. data 2=10711
 (NH₄)₂SO₄, ferroelec. transit. 2=14916-17
 (NH₄)₂SO₄, -50°C 3=17981

Phase transformations—contd

- (NH₄)₂SiF₆, cubic-hexagonal, rel. to thermal props 4=12645
 Na, allotropic transf. due to plastic deformation 0=3170
 Na, elec. cond. rel. to pressure over 500 kbar 4=1559
 Na, elec. resistivity of two low-temp. phases, 15-50°K 0=7914
 Na, martensitic, effect on electronic spec. heat 1=913
 Na, martensitic, meas. rel. to thermoelec. power 2=12551
 Na, martensitic transform. in 30°K range 4=6745
 Na, martensitic transformation, spec. ht. study 0=7851
 Na, volume change 0=21188
 NaCN, n.m.r. studies 4=23294
 NaCl, crystallization, "Morphodrome" diagrams 3=16042
 NaCl, to cubic CsCl-type, under high press. 3=16015
 NaCl, structure change to CsCl-type at 18 000 kg/cm² 2=23804
 NaCl, structure change to CsCl-type at 18 000 kg/cm² 3=6811
 NaCl, X-ray diffr. study, to 100 kbar 2=8811
 Na-K-Cl-Br ternary system, phase diagram 1=20614
 NaN₃, crystal structure change at 19°C 4=26566
 NaNO₂, critical scatt. of X-rays, meas. 4=20716
 NaNO₂, ferro- to antiferroelec., from specific heat temp. var. 4=17769
 NaNO₂, ferroelec. 2=4091
 NaNO₂, ferroelec. phase transition, X-ray study 3=25405
 NaNO₂, ferroelec. transforms., 163°C 4=7512
 NaNO₂, ferroelectric 1=14557
 NaNO₂, ferroelectric, X-ray study 3=13397
 NaNO₂, new phase between ferro- and paraelectric phases 1=20560
 NaNO₂, 163°C, study by polarized i.r. absorpt. 2=2238
 NaNO₂, 163°-178°C 4=1663
 NaNO₂, X-ray and neutron diffract. study 3=1336
 NaNO₃, anion rotational disorder, above 275°C 4=29019
 NaNO₃, i.r. investigation 4=20717
 NaNO₃, model, rel. to Na²³ n.m.r. data 2=10724
 NaNO₃, X-ray diffr. study, to 100 kbar 2=8811
 NaNbO₃, 360°-635°C 4=10438
 NaNbO₃, 20-700°C, X-ray study 2=2341
 NaNbO₃(1-x).KTaO₃x, rel. to ferroelec. data 2=14919
 Na(Nb_{1-x}Ta_x)O₃ 3=13394
 Na(Nb_{1-x}V_x)O₃, ferroelec. 2=12571
 NaSH, n.m.r. study 4=7511
 NaSbO₃, pyrochlor-ilmenite, meas. 4=13501
 NaTaO₃, 22°-680°C 3=23377
 NaYF₄, crystal structure, 670°C 3=23455
 Nb, involving interstitials 4=17766
 Nb oxides, and structure, from X-ray and electron diffr. 3=13458
 Nb-N terminal solid soln., metal-gas equil. 3=11298
 Nb and Nb-base alloys, oxides 3=11287
 Nb-O solid soln., electron microscopic investigation 4=30805
 Nb₂O₅, polymorphism, X-ray diffr. study 1=1398
 Nb-Sn, constitution diagram 4=13498
 Nb-Sn, 800-1000°C 3=8893
 Nb-Sn, supercond. 2=21536
 16% Nb-Zr alloy, $\beta \rightarrow \alpha$ transformation, reversibility 4=23281
 Nb-Zr, sepn. into two b.c.c. phases 2=21535
 Nd, allotropy at high press. 4=26560
 Nd in Mg, supersat. solid soln., decomposition effect of plastic deformation 4=10435
 Ni films, f.c.c. to h.c.p., by neutron irradiation 1=19822
 Ni films, neutron irradi., f.c.c. to h.c.p. change 0=10338
 Ni, metal-insulator-metal, under high compressions 4=6928
 Ni, neutron effect 4=23282
 Ni nitrides, by N insertion 3=1322
 Ni, strain-ageing meas. on stress-strain curves 4=13433
 Ni-Al bronze, β - α , non-equil. segregation 3=18352
 Ni-B system, 300-550°C 4=15742
 Ni-Be, aged, orientations of new phases 3=16099
 Ni-Be alloy, "hot" ageing and recovery 4=2112
 Ni-C-Fe crystals, martensite formation on surface 4=15805
 Ni-Cd system, liquidus curve 4=16291
 Ni₃Co, ordering, effect on Debye characteristic temp. 4=1982

Phase transformations—contd

- Ni—Cr alloy, short-range ordering, room temp.
-600°C 4=1998
Ni—Cr alloys, formation of K-state 2=10909, 15058
Ni—Cr films, vacuum deposited, structure changes rel. to annealing temp. 4=26562
Ni—Cr, irradi., structural 4=1996
Ni—Cr (21.4 wt%), K, neutron effects, 4=23282
Ni—Fe alloy, f. c. c. → b. c. c. lattice 4=9954
Ni—Fe alloy, by N atom insertion 3=1323
Ni—Fe alloy, plastically deformed and heat treated 5=26524
Ni—Fe (50/50), ordering due to neutron irradi. 4=13207
Ni—Fe (72%), $\gamma \rightarrow \alpha$, X-ray diff. obs. 4=23271
Ni₃Fe, ordering, on annealing, and mag. anisotropy change 3=23155
Ni₃Fe, ordering, effect on Debye characteristic temp. 4=1982
Ni₃Fe, short-range order, rel. to heat treatment and plastic deformation 4=23285
Ni—Ga, mag. props., temp. var. 4=4327
Ni—In, mag. props., temp. var. 4=4327
Ni—Mn alloy, ordering, effect of plastic deform. 3=5133
Ni₃Mn alloy, ordering, effect on saturation magnetization 4=28825
Ni₃Mn, disorder to order transformation 1=6535
Ni₃Mn, effects of order on Hall consts. 2=6422
Ni₃Mn, at ~110°K 0=17890
Ni₃Mn, order—disorder, from Mössbauer effect 3=13528
Ni₃Mn, ordering, effect on Debye characteristic temp. 4=1982
Ni₃Mn, ordering kinetics 3=3329
Ni₃Mn, ordering kinetics 4=1997
Ni—10 at % Mo, close-range order (K-state) formation 4=23284
Ni—Mo alloys, K-state formation, effect of atomic defects 4=23283
Ni(NH₃)₆-halides, from thermal props. below 1°K 4=22494
Ni—P solid solutions, acid deposited, on heating, X-ray diff. obs. 3=20876
Ni—Pt alloys, order—disorder, rel. to plastic deformation 4=13499
NiRh₂O₄, crystal, 380°K, from mag. susceptibility 3=23196
Ni—Se layers, 4=7505
Ni—Se, thin layers, 20°–400°C 2=12879, 19027
Ni—Sn, mag. props., temp. var. 4=4327
Ni—Ti, phase growth and coagulation in ageing, kinetics 2=8855
Ni—Ti, supersaturated solid solns., decomposition 1=15133
Ni—Ti—Cr, supersaturated solid solns., decomposition 1=15133
NiRh₂O₄, crystal struct., atomic, tetragonal distortion 4=23460
Ni₂SiO₄, high press., olivine—spinel 4=30798
Np, allotropic 0=12056
Np, α — β latent heat 0=2789
Np, pressure-temp.—resistance props. 4=7500
O, solid, crystal structure, atomic 4=7633
O—H system, solid-gas equil. meas. 2=11541
O₂, solid, 0–19 000 kg/cm², 4–120°K 0=12055
P, black 3=13399
P, Bridgman, Krebs and processed black 4=10436
P, pressure and temp. depend. 1=6686
P, I—II, at high press., region of indifference 4=13510
P, red to black, at high press., elec. resist. study 1=3729
PH₃, solid, at 10°K 4=10186
P₂O₅, melt allotropic 3=21311
P₂O₅, reversible transition 1=20398
Pb alloys, ageing mechanism 1=15151
Pb, liquid, temp. depend. of short-range order 2=1134
Pb supercond. films, 2nd order, mag. field effects 4=29835
(Pb, Ba)(Ti, Zr)O₃, ferro- and paraelectric phases 4=15739
Pb—Bi (88:12) films, metastable, from supercond. var. 4=23274
Pb(Mg_{1/3}Nb_{2/3})O₃—Pb(Ni_{1/3}Nb_{2/3})O₃ 1=6195
PbNb(Zr, Ti, Sn)O₃, ferroelectric—antiferroelectric phase changes 4=4216
PbS, due to press., rel. to elec. cond. 2=23257
PbTe, due to press. rel. to elec. cond. 2=23257
PbTe—SnTe alloy system 4=23275

Phase transformations—contd

- PbTe—SnTe, solid solns. 2=17055
PbTiO₃—BiFeO₃, Curie temp. shift 2=2205, 4090
PbTiO₃—LaFeO₃ system 3=20852
PbZr, TiO₃ system, transit. near 75°C 2=17039
PbZrO₃, modified with Ti⁴⁺ and Sn⁴⁺, ferroelectric to anti-ferroelectric transitions 4=26123
Pb(Zr_{0.85}Ti_{0.15})O₃, with 1 wt. % Nb₂O₅, ferroelectric, FE₁—FE₂ 3=22998
PbZr_{0.95}Ti_{0.05}O₃, and velocity acoustic waves 70–80°C 3=15618
Pd—H, isotherms hysteresis 3=25750
Pd—W, Pd—Mo, K-state formation 2=21093
Pr, allotropy at high press. 4=26560
Pt—Al, 3 new phases, crystal struct. 4=23286
PtBi, 420° to 630°C 3=18332
PtBi₂, 420° to 630°C 3=18332
Pt—Mo alloys 2=23880
Pu, α — δ , correspondence matrix 4=4511
Pu, equilibrium temps. 0=21226
Pu, magnetic, ~55°K and Young's modulus temp. var. 3=20691
Pu, pressure-temp.—resistance props. 4=7500
Pu, substruct. form. at high temp. 4=29165
Pu—C, < 50 at % C, 500–1500°C, diagram 4=7508
Pu—Ce 4=29802
Pu—Eu mixed oxide system, from crystal structure atomic 4=7605
Pu—Ga system 4=29015
Pu and δ Pu—Al, order-disorder 1=20622
Pu—Ti alloys, $\beta \rightarrow \alpha$ transformation kinetics 4=29017
Rb, elec. cond. rel. to pressure over 500 kbar 4=1559
RbCl, rel. to press., transparency meas. 2=23803
RbF, f. c. c. to CsCl-type, 9–15 kbar 3=5077
RbHSO₄, ferroelectric transition. 0=7980
RbI, polymorphic, press. effect calc. 2=14922
RbNO₃, with absence of ferroelectricity, mechanism 4=4202
RbNO₃, thermal transformations 3=1252
RbNO₃, transit. energies and temps. 2=8762
RbPb₃, order—disorder, specific heat data 3=12927
Re—Al, diagram, new phase ReAl₄ 3=20882
Re—Mo, atomic order in 2 σ -phases 3=25752
S, β — γ , -88.5°C, from solubility in methanol and petroleum 4=23288
SF₆, solid phase under press. 2=4357
Sb, at high pressures 4=29003
Sb, 90 k bars 4=4501
Sb, up to 70 kbar 3=19067
Sb¹²³Cl₃ crystal compound, 140°K, from n. q. r. freq. discontinuity 4=4433
Sc—Y system, solidus, hexagonal to b. c. c. 4=5443
Sc—Zr system, solidus, hexagonal to b. c. c. 4=5443
Se, β -modification 1=10257
Se, in crystallization 1=14967
Se glass transformation from amorphous state 1=20637
Si, at high pr. metallic modifications 3=11210
Si, rel. to pressure 3=18228
SiC, polymorphism 4=4521
SiC, structures and different c-dimensions 4=2089
SiF₄, solid to 20 000 kg/cm² 0=14042
SiH₄, solid phase under press. 2=4357
SiO₂ (Cristobalite), α — β inversion, neutron irradi. 0=15878
SiO₂—Al₂O₃—Li₂O glasses, volume hysteresis 2=6783
Sm, due to high pressure, meas. 4=17768
Sn—base alloys, cell to dendrite transition 0=16338
Sn, β to α , effect of impurities on kinetics and incubation period 4=7515
Sn, $\beta \rightarrow \alpha$, review 4=7514
Sn film, resistive, supercond., rel. to thermal conductance into liq. He 4=24470
Sn, fusion curves to 10⁵ atom 0=9840
Sn, grey and white, interreln. 3=11209
Sn, grey \approx white, in Sn—Hg alloys 0=727
Sn, supercond., edge effect elimination 4=24502
Sn supercond. films, 2nd order, mag. field effects 4=29835
Sn superconducting films, magnetic 3=19124
Sn, superconducting, hysteresis 3=9687
Sn, white—b. c. c. form, under pressure 3=13452
Sn, white to grey, kinetics 2=21458
Sn, white—grey, kinetics, volume pressure effects 1=14940
Sn, white, at 113–115 kbar 2=23877

Phase transformations—contd

- Sn-Hg alloys, white to grey transformation 0=21231
 Sn-Pb alloys, 2-phase transition 3=13540
 Sn-Pb(0.87%), superconducting, filamentary, complex susceptibility detection 4=414
 SnS films, normal orthorhombic to cubic and h.c.p. structures 4=29189
 SnSe, second order transition 1=14935
 SnTe, high press. 4=17770
 Sr, $\alpha \rightarrow \beta$ and $\beta \rightarrow \nu$ 3=1216
 Sr perovskite-type cpds., ferroelectric and puckering transitions 0=13654
 Sr perovskites, complex, optimal conditions 4=9963
 Sr, at 35 kbar to b.c.c., rel. to Yb 4=4624
 Sr-Bi titanates, -183° to 160°C, X-ray investig. 3=25653
 SrCl₂, from enthalpy var. with temp. 4=8501
 Sr₂FeNbO₆ 3=20773
 Sr₂FeTaO₆, at 250°C, X-ray study 3=18226
 Sr(NiW) O 3=8864
 SrS, vaporization rel. to thermodynamic props. 4=16301
 SrTiO₃ 4=17348
 SrTiO₃, elastic and dielec. consts. 3=5055
 SrTiO₃, ferroelec., microwave loss effects 2=8468
 SrTiO₃, 4.2° K by X-ray diffr. 4=23293
 SrTiO₃, microscopic examination, liq. He temp. 3=17940
 SrTiO₃, n.m.r. study 3=8791
 SrTiO₃, tetragonal-to-cubic temp. from Gd³⁺ e.s.r. 2=18945
 SrTiO₃-Bi₂O₃-3TiO₂, rel. to dielec. props. 3=15620
 Ta, superconductivity type 4=18604
 Ta-Pd alloys, intermediate phases 4=7513
 Ta-Rh, rel. to constitution diagram 4=15744
 Te-Al, diagram 3=20882
 Te, up to 50 kbar and 500°C 4=26568
 Te, high press. 4=13503
 Te, liquid to metallic, 10 800 kg/cm², 482°C 3=19066
 Th, carbide-iodide, allotropic 3=23378
 Th, and Th alloys, f.c.c. \rightarrow b.c.c. 4=29020
 Th-Ce-Al system 1=15124
 Th-Mo alloy 3=8896
 Th-Zr, quenching tempering 2=4439
 Ti alloys, β , to martensitic α , stress induced 4=17771
 Ti alloys, intermediate type, elec. cond. variations 4=28537
 Ti alloys in quenching, β - ω martensitic 3=8892
 Ti, α - β , rel. to energy loss in electron scattering 3=2040
 Ti, α -phase, containing O, ordering 3=6815
 Ti, $\beta \rightarrow \alpha$, martensitic aspects 4=26569
 Ti at 882°C α - β 1=10227
 Ti, h.c.p. \rightarrow b.c.c. rel. to elastic moduli 4=26530
 Ti, heat of transform. meas. 2=21548
 Ti, at high pr. 3=13451
 Ti, resistivity change, voltage signals 2=4451
 Ti, solid-solid, 0-90 kbar 3=20887
 Ti, spurious transformation 4=10440
 Ti-Al-Si system 2=17045
 TiAu₂-Au system, phase diagram 2=17031
 Ti-(8%)Mn alloy, structural changes, rel. to wear 3=20890
 Ti-Mo alloy, martensitic phases 3=23477
 Ti-Mo and elastic consts., Young, shear, density 4=1964
 Ti-Nb alloys, metastable β -phase, decomposition 4=26531
 Ti-Nb and elastic consts., Young, shear, density 4=1964
 TiNi, low-temp. changes, rel. to mech. props. 3=13519
 Ti-Ni system, $\beta/\alpha + \beta$ boundary 4=23295
 TiO, ordering, rel. to vacancy behaviour 3=6815
 brookite(TiO₂), reconstructive, due to neutron irradi. 4=26564
 TiO₂, brookite-rutile, rel. to particle size 2=10779
 Ti-V and elastic consts., Young, shear, density 4=1964
 Ti-Zr alloy, heat of transform. meas. 2=21548
 Ti-Zr alloys, β - α , high vacuum and temp. X-ray camera 0=13972
 Ti-Zr alloys, martensitic transformation 1=4064
 Ti-Zr alloys, martensitic transformation 1=7874
 Ti, polymorphic, at high pressures 3=6814
 Ti, rel. to press. 2=10777
 Ti, press.-temp. diagram, transform vols. calc. 4=30806
 TiNO₃, I \rightleftharpoons II, energy and temp. 3=11197
 TiNO₃, polymorphic, etch pit study 2=21047
 TiNO₃, thermal transformation 3=1253

Phase transformations—contd

 U₂Mo, irradiation-caused 1=1415
 U-Mo-Nb alloys, transform. kinetics 2=4453
 U-Mo-Nb, U rich, ($\beta + \gamma$)/ γ boundaries, 675, 700, 720°C 4=7517
 U-N diagram and UN nuclear reactor fuel prod. 4=12321
 U-Nb alloys, rel. to cooling 3=8894
 U-Nb, γ - β , rel. to cooling 3=8888
 U-Nb, retained β -phase \rightarrow α -phase in U 3=16100
 U-O system from U₃O₈ to UO₂, temp. var. 4=6991
 UO₂, high temp. substoichiometry 2=21534
 U₄O₉, X-ray diffrn. study 3=15445
 UO₃-U₂O₅, rel. to elec. props, 25°-200°C 3=25371
 U-Pu-Mo, thermal behaviour 2=17043
 U-6 wt.% Zr, kinetics 2=4433
 U-Zr alloys 4=7516
 V, strain ageing, dislocations, effect 4=29021
 V, rel. to thermoelec. power anomaly 3=13140
 V-Mo-C alloys 2=17034
 VO, metal-to-insulator, effect of press. 3=1254
 VO₂, thermal effects 4=20718
 V₂O₃, metal-to-insulator, effect of press. 3=1254
 V₂O₃, metal to insulator, press. var. 4=17773
 V₂O₃, neutron diffr. study, 168-533°K 0=6363
 V₂O₃, semiconductor to metal 4=25993
 V₂O₃, metal to insulator, press. var. 4=17773
 W-C system, at 1300° and 1760°C 4=26570
 WO₃, below room temperature 1=9100
 WO₃, crystal growth and evaporation from vapour (700-1800°C) 1=9111
 WO₃, monoclinic-triclinic transformation near 17°C 0=18375
 Xe, adsorbed in porous Vycor glass, from expansion 4=10630
 Y-Fe garnet, by differential thermal anal. 3=8796
 Y, Fe oxide mixtures, by differential thermal anal. 3=8796
 Y-Zn system, solid-liquid 4=5444
 Yb 3=13038
 Yb, f.c.c. to b.c.c. 3=6718
 Yb, f.c.c.-b.c.c., to 40 kbar meas. 4=29022
 Yb, at h.p. 4=17767
 Yb, 20-40 kbars pressure, rel. to elec. props. 3=17899

Phase transformations—contd

- Zn, recrystallization, polygonization, from stress-strain relations 4=7519
 Zn-Al alloy, rel. to plastic deformation 0=16230
 Zn-Al system (40-75 wt% Zn), high-temp. X-ray diffractometer study 4=23299
 ZnO, high-pressure polymorph 3=3254
 $\text{Zn}_2\text{P}_2\text{O}_7\cdot\text{Mn}$ and $\text{Zn}_2\text{P}_2\text{O}_7\cdot\text{Cu}$ crystals, e.s.r. study 4=26572
 ZnS, hexagonal crystals 0=1880
 Zn-Sb alloys, X-ray diffr. analysis 3=8895
 $\epsilon\text{-Zn}_3\text{Sb}_2$, 405, 437°C, from discontinuities in thermo-electricity 3=20436
 ZnSnAs_2 , at 650°C 2=23417
 ZnSnAs_2 , order-disorder, and conductivity thermal var. 3=20118
 ZnSnAs_2 , 635°C 3=11267
 ZnS: Cu, Cl 4=10445
 ZnS: Mn^{2+} , sphalerite-wurtzite, rel. to heat treatment, e.s.r., and luminescence 4=20596
 ZnTe-CdTe, liquid, diagram, and viscosity and elec. cond. 4=11185
 ZnTe-HgTe, rel. to ZnTe concentration 4=15798
 Zn-Tl alloys, phase diagram at low Tl concentrations 1=9147
 Zr, β to α , crystal dislocation regrouping, electron microscope obs. 4=1486
 Zr, β - α , habit planes and orientation 0=16312
 Zr, rel. to deformation 4=28960
 Zr, h.c.p. -b.c.c. cycling, and whisker growth 4=13554
 Zr, h.c.p. \rightarrow b.c.c. rel. to elastic moduli 4=26530
 Zr, heat of transform. meas. 2=21548
 Zr, at high pr. 3=13451
 Zr, internal friction study 2=21544
 Zr-rare-earth alloys, h.c.p. -b.c.c. rel. to composition 2=21546
 Zr, resistivity change, voltage signal 2=4451
 Zr, solid-solid, 0-90 kbar 3=20887
 Zr-Al alloys during gettering activation process 4=21200
 Zr-Al-Si system 2=17045
 ZrC, $\sim 2200^\circ\text{C}$, fruitless search 4=17774
 ZrC, $\sim 2200^\circ\text{C}$, fruitless search 4=17775
 ZrH_2 1=14939
 Zr-Nb (15%), ω phase, electron microscope obs. 4=13507
 Zr-Nb, heat treatment 2=19090
 ZrO_2 films, monoclinic-tetragonal 4=23298
 ZrO_2 , rel. to irradiation 4=4512
 ZrO_2 mixtures with Y, Mg, Ca, Ce oxides, initial temps. 4=23296
 ZrO_2 , monoclinic-tetragonal 3=25654
 ZrO_2 , monoclinic-tetragonal, diffusionless 4=13509
 ZrO_2 , orientation relationship 4=23297
 ZrO_2 , phase change and recovery, radiation-induced 4=4512
 ZrO_2 , polymorphic transform. under cooling, kinetics 4=29023
 ZrO_2 , radiation induced, necessity of impurities 4=17776
 ZrO_2 solid solutions, irradiation-induced 0=21211
 ZrO_2 , tetragonal, pressure and heating effects 4=10443
 ZrO_2 , U-doped, radiation effects 2=18623
 ZrO_2 -CaO, order-disorder, from elec. conductivity charge 4=17778
 ZrO_2 -CaO, order-disorder transition 3=25728
 ZrP , β - α , unit cell dims. study 4=2003
 Zr-Th alloys, $\beta \rightarrow \alpha$ phase transformation 4=29024
 Zr-U-H alloy, transform. kinetics 2=4458
 ZrZn_2 , ferromag. transit. and elec. resist. 2=2118
 Zr- ZrO_2 system 2=4459

Phonographs

See Sound reproduction.

Phosphorescence

See Luminescence.

Phosphors

See Luminescence; Luminescent devices.

Phosphorus

- absorption spectrum in Si 2=23557
 adsorption on Si and Ge, elec. diffraction study 4=20824
 analysis, spectrochemical, in Cu and in Al alloys 0=6428
 atom, mag. hyperfine const. calc. 4=25507
 atoms, aspherical scatt. factors in sp^3 , sp^2 and sp valence state 4=26626
 atoms, μ -mesic, de-excitation 2=22930

Phosphorus—contd

- atoms, μ -mesic, de-excitation 3=6373
 atoms, P^{31} , h.f.s. by spin-exchange optical polarization 2=22911
 black, crystal structures at high pr. 3=13399
 black, crystalline, electrical and optical props. 3=17891
 Bridgman, Krebs, and processed black, transformations and elec. props. 4=10436
 creep, rel. to pressure, in white P 4=15712
 determination in low-alloy steels using VC1 vacuum quantumeter 4=7795
 diffused layers in p-type Si, concn. profiles 1=7643
 diffused in Si, dislocation distrib. near jn., meas. 4=28471
 diffused in Si, distribution 3=2833
 diffusion-doping in Si tunnel diodes 3=20361
 diffusion in Fe, α , γ , δ , 1250-1350°C 4=17442
 diffusion in Fe, radiometric study 4=20294
 diffusion in Fe, 700-890°C, alloying effects 4=20296
 diffusion in GaAs, rel. to GaP-GaAs formation 3=20227
 diffusion in KCl, and electrolytic migration 1=14314
 diffusion in Si 2=18600
 diffusion in Si, concn.-depend., calc. 4=9993
 diffusion in Si, dislocation prod. 4=22590
 diffusion in Si, distrib. 2=21072
 diffusion into Si, effect of oxide layers 0=6059
 diffusion in Si, fast mechanism 3=2832
 diffusion, in Si, ion bombarded 3=22823
 diffusion in SiO_2 film 0=11642
 diffusion, in Si, P distrib. 1=3687
 diffusion in Si, P_2N_4 as diffusion source 4=22625
 diffusion in Si, process 2=18601
 diffusion into Si through SiO_2 films 4=28483
 diffusion in Si, to thin layers, concn. profile 2=23208
 dislocations in Si due to phosphorus solute diffusion 1=14270
 donor, in Si single crystals, stacking faults 4=28574
 electrical resistance, at press. up to 200 000 atm, red-black transform. 1=3729
 electron affinity, calc. 0=9745
 gettering effect on Si p-n junctions 0=18032
 ions, forbidden transition probabs. calc. 3=25055
 ions, P^- , lowest config., Hartree-Fock calc. 4=12377
 ions, range in solids and gases 2=7674
 mass spectra of red P 2=1393
 mesic atom, μ^- -meson lifetime 1=17300
 mesic atoms, μ -decay in black and red P 2=14232
 mesonic X-ray lines, rel. to μ -meson mass. 0=11559
 monolayer on Si, struct. 2=19106
 μ^- -polarization, search, red P 3=15314
 multipole spectrum 4=19949
 phase transformations, pressure and temp. depend. 1=6686
 phase transitions, I-II, at high press., region of indifference 4=13510
 positive ions, 5-25 keV, sputtering of Cu 1=8363
 red, surface interaction with alkyl iodide vapours, desorption 0=3305
 red, thin film deposition method 4=29186
 resistivity rel. to pressure up to 3×10^5 kgm cm^{-2} 3=2902
 solid white, n.m.r. relaxation times 3=5050
 spectrum, in Si, compensated, i.r., vibr. absorpt. 4=4274
 spin-spin coupling with protons 3=719
 supercooled, crystallization waves 3=9658
 thermodynamic props., for gaseous state (1 atm, 100-1000°K) 0=19200
 valence electrons; approx. wave-functions 0=469
 As, Mn, Ga contamination, neutron activation detm. 3=1398
 in Cu-Al alloys, effect on ordering 4=1985
 P-polythene, neutron meas. 3=2284
 P^{32} beta spectrum 2=?509
 P^{31} in PCl_5 , effect on n.m.r. of rotation of specimen 3=25584
 in S, paramag. relax., meas. 4=28882
 in Si, i.r. absorpt. impurity lines, width and temp. depend. 4=28673

Phosphorus compounds

- adsorption and desorpt. of phosphate anion on Pt, multipulse potentiodynamic meas. 4=30890-1
 apatite halophosphates, colour centres and luminescence 1=17569

Phosphorus compounds—contd

- carboxyl phosphate, quantum mech. calc. of electron distribution 0=7736
 dihydrogen phosphates, electro-optical behaviour compared to CuCl 4=10171
 diphosphate ion, diffusion in var. liquids 0=3511
 ludlamite, mag. transition, low temp., para to anti-ferromag. 4=17698
 molecular groups in crystals, i.r. vibration frequencies 3=20483
 orthophosphates, Cu-activated, luminesc. and cryst. struct. 2=8578
 phosphate phosphors, intensity-temp. dependence 0=2961
 phosphates, neutron irradi. annealing 3=22872
 phosphates, 7, i. r. spectra meas. 4=13059
 phosphomolybdic acids, var. H₂O, atomic struct., from n.m.r. 4=23461
 phosphoryl and thiophosphoryl halides, potential consts. and thermodyn. props. 3=2634
 trifluorophosphine, thermodyn. props., 12°K to b.p. 2=13484
 CF₃PF₄, F¹⁹ spectrum 0=17781
 H₃PO₄, D₃PO₄, and their salts, i.r. spectra 4=22870
 H₃PO₄, Al, electrolysis, luminescence, flash spectra 3=10984
 H₃PO₄, γ-ray irradi. at 77°K, atomic H and H₂ yields 0=14137
 H₃PO₄, molar sound velocity 0=19133
 H₃PO₄, n.m.r., splitting and widths of p reson., ~1G 4=1307
 H₃PO₄ solns., dielec. const. 4=21147
 H₃PO₄, thermally dehydrated, Raman spectra and structure 3=15695
 P³² isotope concentration in rain water 1=13680
 P(CH₃)₃, reaction with BF₃ 1=6569
 [P(CH₃)₄]₂HgBr₂, ferroelec. props. 2=4093
 P(CN)₃, crystal struct., atomic 4=29128
 PCl, centrifugal distortion of bond distances and angles 2=14233
 PCl₃, dipole moment and ionic character, calc. 1=14119
 PCl₃, force constants, from i.r. data 1=13980
 PCl₃, gas, mol. struct. rel. to temp. 2=22955
 PCl₃, mol. struct. of vapour 2=6122
 PCl₃, molecules, thermal vibr. 2=8083
 PCl₃, thermodyn. props. and force consts., spectral data 2=12329
 PCl₃, vibrational potential consts. 2=6123
 PCl₃, mean ampl. of vibr. 4=15358
 PCl₃, bond length differences, theory 3=10497
 PCl₃, mol. potential consts., calc. 4=9724
 PCl₃, n.m.r. spin-lattice relax., rotat. sample 3=20683
 PCl₃, nuclear resonance of P³¹, chemical shift 1=6430
 PCl₃, PF₅, potential field and force constants 0=1501
 PCl₃, thermal conductivity of dissociating system 3=9503
 PCl₄F, PCl₃F₂, PCl₂F₃ and PF₅, structures, from i. r. and low-temp. 4=25679
 PCl₄, P³¹ n.m.r. for rotating crystal, chemical shifts due to (PCl₄)⁺ and (PCl₄)⁻ 1=10187
 PCl₂ON PCl₃, n.m.r., double, and P³¹-P³¹ homonuclear decoupling 4=9770
 PD₃, mean vibration amplitudes 1=14000
 PD₃, vibr. relax., by u.s. velocity dispersion 3=22567
 PF, dipole moment and ionic character, calc. 1=14119
 PF₄ e.s.r. in NH₄PF₆, rel. to γ-irrad. 3=20652
 PF and PF₃, electronic spectra 2=16520
 PH, analysis of (1,0) band of ³Π₁-³Σ⁻ system 0=11520
 P-H ions in PH₄ halide crystals, i.r. spectra 2=8095
 PH molecule, ²π state 2=3755
 PH₃, force constants and interaction constants 0=20600
 PH₃, i.r. spectra 2=8095
 PH₃, phosphine, near u.v. absorption spectra 3=19996
 PH and PH₂ radicals, lower electronic levels 4=28200
 PH₂ and PD₂, electronic absorpt. spectrum 4=20168
 PH₃, mean vibration amplitudes 1=14000
 PH₃, molecule, SCF MO one-centre basis set 4=20047
 PH₃, PD₃, molecular props. 0=4187
 PH₃, quantum-mech. theory, semiempirical 3=25112
 PH₃, solid, i. r. absorpt. spectrum showing new phase transition at 10°K 4=10186
 PH₃, theory of intensities of i.r. spectra 0=4203
 PH₃, Urey-Bradley force field 3=22552
 PH₃, vibr. relax., by u.s. velocity dispersion 3=22567
 PH₄⁺, molecule, SCF MO one-centre basis set 4=20047

Phosphorus compounds—contd

- PN, bands of A'π-X'Σ⁺ system, rel. transition probability 4=9726
 PN, molecular vibr. r-centroids of A'π-X'Σ⁺ system using Morse potential 4=9725
 P-N compounds, P³¹ n.m.r. chemical shifts rel. to structure 4=9771
 P₂N₆, diffusion source for P diffusion in Si 4=22625
 (PNCl₂)₃, Cl³⁵ nuclear quadrupole resonance 3=23264
 (PNCl₂)₄, cryst. struct. 2=15031
 P-Ni films, elec. cond. 3=10725
 PO, potential and dissociation energies 3=17582
 PO radical spectrum in P₄ + O reaction 4=23638
 PO, u. v. doublet systems analysis 2=16519
 PO₂ groups, characteristic vib. freqs. 3=12838
 PO₂, molecular vibr., mean ampl. 4=25665
 PO₃⁻ ionic radical, e. s. r. and struct. 2=2017
 PO₃³⁻, potl. consts. calc. 2=22934
 P₂O₅, crystal structure 4=23462
 P₂O₅, diffusion in Si from azeotrope with water 2=18602
 P₂O₅, effect on BiO polymorphism 4=23253
 P₂O₅, melting and crystallization 3=23420
 P₂O₅, molecular structure, electron diffraction study 0=17855
 P₂O₅, reversible phase transition 1=20398
 P₂O₅, thermodynamic props., 12-324°K, calc., from specific heat 4=9858
 P₂O₅, viscous flow and melt allotropy 3=21311
 P₂O₁₀, mol. struct. 2=22951
 10 P₂O₅. 90 M₂O₅ (M = Nb, Ta), tetragonal phase 4=26666
 P₂O₁₀, crystal structure 4=26667
 PO₄ ions, adsorption by Zr, P³² tracer meas. 4=4677
 POCl₃, i. r. absorpt. intensity of symmetrical vibrations, effect of O¹⁸ 4=25680
 P₂O₅-GeO₂, molecular structure 4=15353
 P₂O₅-GeO₂-H₂O crystal struct. from i. r. spectra 4=17814
 PO₂H₂⁻ ions, n.m.r., ~1G 4=1309
 P₂O₅-SiO₂, molecular structure 4=15353
 P₂O₅-SiO₂-H₂O, crystal struct. from i. r. spectra 4=17814
 P₂O₅, Ti₂O, 2H₂O; 2P₂O₅, Ti₂O, 3H₂O and P₂O₅, 2Ti₂O, H₂O, solubility diagrams 4=15725
 PT₃, mean vibration amplitudes 1=14000
 PT₃, wave-numbers, rotational distortion const., thermodynam. props. 0=17741
 PYZ₂ (Y, Z = H, D, T), wave numbers, rot. distortion const., thermodynamic props. 1=6000

Photochemistry

- See also Photographic process.
 acetone, far-u.v. photolysis 4=29231
 acetone, flash photolysis. 3=25835
 acetone, flash photolysis with filtered light 1=6574
 acetone, with HI, photolysis 2=12980
 acetylene, 1-butyne and propyne, Hg-photosensitized decomp. 4=4708
 actinometer, ferrioxalate, quantum yield 4=10649
 alcohol-H₂O₂ mixtures, u.v.-irrad., free radical formation, e.s.r. study 0=20662
 alkali halides, F-centres, transform. 2=23215
 alkali halides, precipitation reactions in crystals 1=2556
 alkali halides, transformation from F- to F₂-centres 0=15857
 alkali halides, U → F conversion 2=23221
 alkyl hydroperoxides, dissociation, e.p.r. study 0=8314
 all yl-type-alkyl-type radicals change 4=4712
 ammonia, photolysis in solid matrix 0=14128
 anils, transient species in photolysis 4=15847
 anthracene-electrolyte interface, photoelectrolytic effects 3=23549
 apparatus for extreme u.v. 3=3404
 aqueous azide solns., photolysis 3=6922
 aromatic acids, u. v. attack, eosin sensitized 4=7770
 azoethane, flash photolysis 2=19156
 azomethane, determination of methyl affinities 1=2559
 benzophenone, photoreduction 0=14130
 biacetyl 0=14129
 biacetyl, photo-oxidation 0=14127
 biacetyl vapour, at 4358 Å, primary process 2=6890
 biacetyl vapour, photodecomposition 1=7917
 1,3 butadiene, photolysis, primary processes and photo-polymerization mechanism 4=17868
 n-butane, photolysis in vacuum u. v. 4=4709

Photochemistry—contd

butane, photosensitized isomerization, reaction kinetics 4=13739
 butene-1, mol. rearrangement in Hg-photosensitized reaction 2=19158
 butene-2, Hg-photosensitized decomp. at low press. 3=8971
 cellulose, colour changes 2=6891
 charge transfer complexes in solns., dissociation, from e.s.r. 4=4706
 chem. reacting systems interacting with radiation, thermodynamics 1=20752
 chlorination of H_2 , CH_4 , $CHCl_3$, and C_2H_6 , isotope effect 3=11356
 chlorophyll, luminescence 1=3872
 chlorophylls a and b, photo- and semiconduction 1=14313
 colour centre formation in ionic crystals 2=23211
 crystals for different photographic emulsions, property variations 3=1396
 cumene, reaction with anthracene, chrysene and pyrene 0=8317
 cyanates, NCO free radical formation, in flash photolysis 1=856
 cyclobutyl, reactions in cyclobutane/acetone mixtures 2=4551
 1,3-cyclohexadiene : 1,3,5-hexatriene system, internal conversion 3=11355
 cyclopropanes, Hg(3P_1) sensitized reaction 1=20754
 diazomethane, in solid matrix, chemiluminescence of ethylene 0=13723
 diborane, photolysis at 1849 Å 2=19157
 diethyl ketone- CCl_4 mixtures, photolysis 3=18455
 9,10-dihydroanthracene, reaction with anthracene, chrysene and pyrene 0=8317
 γ -(2,4-dinitrobenzyl) pyridine 2=8925
 α - and γ -(2,4-dinitrobenzyl) pyridine, flash photolysis 2=19160
 γ -(2,4-dinitrobenzyl)-pyridine, photochromotropism 0=16381
 2,4-dinitrotoluene, isomerization, acid catalysis of fading. 3=25836
 dissociation rate of vibronically excited molecules, calc. 0=15683
 dyes, in rigid media, delayed fluorescence 4=1789
 electron transfer in frozen solid solns., e.p.r. study 2=6686
 electron transfer processes in solution, mechanism 0=10357
 eosin-phenol system, primary processes in 0=4725
 ethane, photolysis at low conversions 4=13740
 ethane, solid, vacuum photolysis at 77°K 2=19154
 ethane, u.v. photolysis 1=6573
 ether solutions of K metal and of naphthacene dianion flash photolysis 3=16180
 ethyl radicals, reaction with I atoms 3=8972
 ethylene, Hg-photosensitized reaction at high temp. 3=8970
 ethylene, vac.u.v. photolysis 2=4549
 flash-photolysis apparatus for u.v. region 4=4710
 flash photolysis system 0=3317
 flash photolysis, review 2=15155
 fluorescein, aq. soln., various ionic forms 3=3809
 fluorescent yield, in sensitized reactions 2=19163
 formic acid reaction with chlorine, test for intermediate 1=7918
 free radicals and reactive molecules, stabilization in water clathrate lattice 4=9784
 gaseous polyatomic molecules, primary processes 0=14129
 gas-phase reactions, new approach to rate theory 3=11357
 glyoxal, photolysis at 4358 Å 4=25756
 halide solutions, flash photolysis, absorption spectrum of dihalide ion 0=10357
 halogen ion, di, formation, in glasses, by u.v. 4=4707
 halogens in soln., transient species in flash photolysis 0=6414
 hydrazoic acid, photolysis in solid N 0=21288
 hydrocarbons, aromatic, photoionization by u.v. in boric acid glasses 0=21290
 intense bursts from discharge lamps, effect 2=19162
 ionosphere, F region 2=15245
 ionosphere, F2 region, 1958 eclipse data 0=16447
 ketene, dissociation 0=15683
 ketene, photolysis 2=6230
 Keynon-Banfield radical, rel. to photocond. 2=14584

Photochemistry—contd

light source, He plasma, 584 Å 4=27305
 light source for photolysis 0=479
 light source, vac. u.v., H lamp 3=14330
 matrix isolation, photolysis of hydrazoic acid 0=3320
 mesonaphthodanthrene oxidation 0=21289
 methane, ethane and ethylene, at wavelengths below 900 Å 3=13618
 methane, photolysis, effect of pressure 4=17870
 Methane, photolysis, by vacuum u.v. 3=25834
 methane, vac.u.v. photolysis 2=19155
 methyl free radical prod. 0=4710
 4-methyl-2-hexanone, photolysis 2=23968
 methyl iodide, gas-phase photolysis, reactions of hot methyl radicals with added organic cpds. 4=28271
 methyl isopropyl ketone photolysis 1=20757
 molecules at second triplet level, reactions, evidence 4=10647
 monochloroethyl and trichloromethyl radicals, recombination and disproportionation 3=8974
 nitrous oxide photolysis in far ultraviolet 1=6575
 organic compound formation by u.v. irradiation of simple gas mixtures 1=6576
 organic cpd. formation, in simple gas mixtures 0=3318
 ovalbumin, u.v. attack, eosin sensitized 4=7770
 ozone, quantum efficiency in yellow-red light 2=21591
 phenol, free radicals from flash photolysis 0=6413
 phenanthrene, from photolysis of cis-stilbene 3=23551
 photochemical reactions, sensitized, dissociation 2=4552
 photochlorination reactions, interpretation 2=19159
 photochromism of N-3-pyridylodnone 2=2452
 photochromism, review 4=13736
 in photo-ionization region 3=13618
 photo-isomerization of spiropyran to merocyanine 1=10297
 photolysis of ethylene and butane by vac. u.v. 1=12681
 photolysis, flash, 50 kV 8 kJ apparatus, damping effect 4=26761
 photolysis, methyl azide, methyl-d, azide in solid A, CO_2 1=20755
 photolysis, N_2O and CO_2 mixture 4=10634
 photosensitized oxidation of phenol by dyes 1=7919
 photosynthesis, semiconductivity theory, evidence 1=6060
 2-picoline N-oxide, photolysis 2=15156
 planetary atmospheres, rel. to gaseous absorption coeffs., 1850 to 4000 Å 4=11249
 plants, green, photosynthesis mechanism, e.s.r. studies 1=9212
 propane, vac.u.v. photolysis 2=23969
 pyridine N-oxide, photolysis 2=15156
 reaction kinetics, avoidance of explicit solns. of diff. equn. 4=29229
 saturated hydrocarbons, photolysis, theory 4=29230
 sec-butyl acetate, photolysis 2=23968
 stilbene, photoisomerism, rel. to u.v. spectra 2=14675
 styrene, polymerization, photo-sensitized by anthracene 0=8316-17
 surface reactions on phosphors with atmos. gases, rel. to background spectra 1=10113
 triplet state energy transfer 3=13619
 u.v. monochromator 2=7356
 u.v. resonance line source, 2450 Mc/s excited discharge 4=14349
 upper atmosphere of Jupiter 2=24103
 viologens, free radicals, e.s.r. spectra 3=20028
 Ag, colloidal, bleaching inside AgCl crystals 0=9913
 Ag halides, interchangeability derivations, electronic mechanism 4=23670
 Ag halides, photochemically coloured, absorption 1=8985
 Ag halides, precipitation reactions in crystals 1=2556
 Ag halides, spontaneous formation of Ag nuclei 2=22068
 Ag halides, trapping of positive holes, rel. to photographic process 1=9490
 AgBr, absorption spectrum, with divalent ion impurities 2=2227
 AgBr, paramagnetic resonance 0=6415
 AgBr, print-out effect, defect electron behaviour 3=3406
 AgBr, sensitizers 0=10358
 AgCl, Cu-doped, rate of volume photolysis 3=11358

Photochemistry—contd

- AgCl, with divalent impurities, photochem. response 1=5046
 AgCl, sensitized crystals, at -253°C 0=10356
 AgCl, with traces of CuCl, photographic process 0=19465
 Ba azide, photolysis in solid state, mechanism 1=2558
 BaTiO₃, photosensitivity 0=4726
 CF₃Br₃, flash photolysis, CF₃ radical study 1=2317
 CH₂, solid state reaction with CO₂, i.r. study 2=15157
 C₂H₂ ionization 4=23671
 C₂H₆-acetone-d₃ mixtures, photolysis and pyrolysis 1=7916
 CH₃NO₂, photolysis, and CH₃O radical formation 4=22435
 CN, radical formed from C₂N₂, kinetics of disappearance 2=20882
 CO, a³Π level, excited by iodine lamp 4=13738
 CO oxidation, ZnO photosensitized, kinetics, activation energy 4=17869
 CO₂, dissociation by single flash 0=1961
 CO₂, photolysis 0=21287
 CdI₂, photolysis 0=18066
 CdS, Cd separation by u.v. photolysis 2=4553
 CdS, changes in traps, rel. to origin 2=10381
 CdS, elec. and photoelec. meas. 3=3407
 CdS, from luminescence rise and fall curves 4=7771
 CdS, luminescence temp. depend. 3=15705
 CdS photocond. cells, reactions due to strong illum. 1=5031
 CdS, rel. to quenching of photocond. 2=4062
 Cl₂, and optica-acoustic effect 0=19215
 Cl₂ + O₂, photolysis, free radical prod. 0=1535
 ClN₃, in solid A, i.r. photolysis 1=12680
 Dy³⁺ in CaF₂, Dy³⁺ → Dy²⁺ photo-reduction by γ-rays 4=23679
 Ge electrodes, effect of illumination 0=21286
 Ge electrodes, photochemical processes in cathodic polarization range 0=21281
 HCO, radical formation 0=5930
 H₂-D₂ exchange, in presence of rare gases 0=749
 HI, photolysis at 1849 Å 4=23672
 HN₃, photolysis in solid CO₂, i.r. spectra 3=3402
 HN₃, solid, photolysis, N chain cpds as inter-mediate 0=4727
 HNC, photolysis from CH₃N₃, i.r. identification 3=22584
 HNCO and DNCO, photolysis, low-temp. i.r. study of intermediates 4=23674
 HNO₂, i.r. isomerization 3=16159
 HO₂, intermediate, i.r. spectroscopic evidence 3=17586
 H₂O, decomposition using anthracene crystal 1=1488
 H₂O, formation of H₂ in photolysis 0=3319
 H₂O, vac. u.v. photolysis 2=4550
 H(²P) atom, photosensitized reaction with N₂ 2=17096
 Hg photosensitization, electron energy transfer 3=25053
 Hg photosensitized decomposition of n-butane 1=20753
 Hg 6(³P₀), with nine gases, spectroscopic meas. 2=6877
 Hg6(³P₁), reactions with hydrocarbons, D isotope effect 3=8973
 I, flash photolysis 1=20735
 K halides, with O complexes 0=8009
 KBr crystals, with OH⁻ and SO₄²⁻ ions, new absorption bands rel. to irradi. 2=19161
 KBr, U₂-centre 3=10696
 KBr, u.v. irradi. at 15° K, colour-centre prod. 1=7601
 KBr, V₁ centres 1=7602
 KCl crystals, F-centre to M-centre photochemical conversion kinetics 4=25972
 KCl crystals, with OH⁻ and SO₄²⁻ ions, new absorption bands rel. to irradi. 2=19161
 KCl crystals, photochem. reactions 4=26760
 KCl, U₂-centre 3=10696
 KCl, u.v. irradi. at 15° K, colour-centre prod. 1=7601
 KCl, V₁ centres 1=7602
 KI, aq. soln., flash photolysis, electron transfer mechanism 0=10357
 NH₃, flash photolysis in vacuum u.v. 4=7769
 NH₃, photodissociation 4=4711
 NH₃, primary photolysis at 1470 Å 4=23676
 NH₃, vac. u.v. photolysis 2=4550
 N₂O, photosensitized decomposition by Hg 6(³P₁) atoms, isotope effect 0=15650
 NO + O reaction, quantum yield 4=13720

Photochemistry—contd

- NO₂ flash photolysis, conc. of vibrationally excited O₂ 4=23675
 NO₂, photolysis 3=18456
 NO₂, photolysis, 4047 Å, temp. var. 3=25833
 N₂O, photolysis 1=9174
 NO₂Cl, photodecomposition 1=20756
 NaCl, U₂-centre 3=10696
 NaN₃, kinetics of photolysis 1=20758
 NaN₃, solid state 1=17579
 NaN₃, solns. with mercuric salts, photolysis 4=2166
 NaNO₂, solns. with mercuric salts, photolysis 4=2165
 O₂, photodissociation in Schumann-Runge system 0=17721
 O₃, flash photolysis, reactions of excited O and O₂ 0=8319
 O₃, with NO 0=8315
 O₃, photolysis, O₃^{*} distrib. and relaxation 4=10648
 O₃, reactions in gas phase 2=4548
 O₂-CO photolysis in solutions, 77°K 4=13734
 O(¹D)-CO photolysis, 77°K 4=13735
 PbI₂, decomposition, and image recording 4=21323
 PbI₂, photodecomposition 4=26202
 S₂Cl₂, flash photolysis 0=16382
 SO₂ and SO₃, flash photolysis 0=8318
 Si-KOH boundary 3=6923
 ThBr, with green pinacryptol desensitizer 1=15201
 ZnS, under u.v., darkening and bleaching 4=13737
 ZnS, Zn separation by u.v. photolysis 2=4553
- Photoconductivity**
 a.c. impedance for blocking layers, analysis 2=21184
 rel. to absorption and emission of radiation 2=4056
 adsorption effects 1=3738
 alkali antimonides, properties 0=20927-8
 alkali halides, additively coloured 1=17828
 alkali halides containing U-centre, u.v. region 4=4226
 alkali halides, due to u.v. 3=20248
 alkali halides, plastically deformed, decrease 1=14271
 alkali halides, U → F conversion 2=23221
 alkali halides, vac. u.v. 3=10964
 alkali metal azides, 1400-10 000 Å 3=25415
 anthracene 2=14744
 anthracene, carrier generation 2=23449
 anthracene, carrier generation 4=22530
 anthracene, carrier mobility 2=4027
 anthracene, carrier prod. and mobility 0=13620
 anthracene, carrier trapping 4=22531
 anthracene, for charge carrier drift mobility meas. 4=22528
 anthracene, charge injection effects 2=14579
 anthracene crystals, photocurrents, ruby-laser excited 4=20433
 anthracene doped with anthraquinone, anthrone, or naphthacene 4=15448
 anthracene, effect of gases, N₂, O₂ 2=6494
 anthracene, with electrolyte contact, photoelectrolysis effects 3=23549
 anthracene, exciton-exciton interaction 4=15572
 anthracene, exciton-exciton interactions 2=14580
 anthracene, exciton processes 4=1439
 anthracene, exciton production 0=9999
 anthracene, free carrier generation via exciton-exciton interactions 3=10887
 anthracene, generation of carriers, single exciton process 4=15463
 anthracene, generation of free carriers 1=2424
 anthracene, hole and electron drift mobilities 0=15997
 anthracene, hole-injection energy-balance 0=10000
 anthracene, meas. and exciton model 3=2970
 anthracene, mechanism 3=8568
 anthracene, positive hole injection 0=4371
 anthracene, reabsorption of light, effect 2=6491
 anthracene, sensitized 3=13129
 anthracene, rel. to singlet-singlet and singlet-triplet interactions 4=7078
 anthracene, space-charge-limited currents 2=14578
 anthracene, surface impurities effect 2=4059
 anthracene, temp. and elec. field effect on free carrier photo-generation 4=22809
 anthracene thin layers, adsorbed I₂, air and water vapour effect 4=30630
 anthracene, thin layers in vacuum, meas. 1=17631
 anthracene, and trap energy distrib. 4=1690

Photoconductivity—contd

- anthracene, trapping centres, conductivity glow-curve study 1=2422
 anthracene, voltage, illumination and electrode separation depend. 0=18065
 anthracene, wavelength depend. 1=6175
 anthracene, X-ray and u.v. 3=6628
 applications, displacement recording system 2=3128
 aromatic nonionic crystals, photoconductivity and inter-molec. interaction 4=22810
 barrier-layer cells, effect of contacts 1=17789
 benzene 2=21922
 blood pigments, photocurrent 350-650 μ 2=16718, 21158
 boric acid, rel. to electrode photo-effect and absorbed moisture 2=8434
 capacitance change in phosphor-containing condenser 0=3715
 capture cross-sect. determ. by optical quenching 4=28636
 β -carotene cis-trans isomers, activation energies 1=3787
 β -carotene, effect of O_2 adsorption 1=6180
 β -carotene isomers 1=8965

- trapping level effects, for insulating crystals and semiconductors 0=18060
 trapping levels, introduction, effect on nonequilib. electron lifetime 4=1575
 trapping, rel. to persistent internal dielec. polarization 2=4089
 trapping and recombination, meas. by light modulation tech. 2=8399
 triphenyl methane dyes, quantum yield 0=1684
 triphenylamine, hole photoconductivity 4=26154
 triphenylmethane dye halides, dark conductivity 3=25416
 triphenylmethane dyes, carrier "sticking" levels 4=26155
 tryptaflavine, films, wavelength depend. 1=3783
 two-carrier, gain and light-dark current ratio 4=4221
 II-VI semiconductors, surface props. 1=14461
 ultrasonic absorption, review 3=10594
 unipolar photoconductors, kinetics 4=1672
 unipolar photoconductors, recombination centre parameters 4=1671
 X-ray image amplification 0=5541
 X-ray image intensifier, with photoconductor electro-luminescent phosphor 0=3617
 X-ray induced, spurious constancy with beam intensity 4=10118
 A^{III-VI} compounds, at low temps. 2=8413
 A^{II-VI} compounds, charge transfer, light induced, by e.s.r. 2=8416
 A^{III-VI} compounds, single crystals 0=11722
 Ag azide 4=17493
 Ag halides 0=20871
 AgBr 2=21198, 23471
 AgBr 3=2969
 AgBr 3=6636
 AgBr, effect of Br₂ and Cl₂ gases 1=3727
 AgBr, electron Hall mobility down to 4°K 2=23472
 AgBr, electron mobility and lifetime 2=4070
 AgBr, electron mobility and scatt. processes at low temp. 0=15994
 AgBr, grains, from emulsions, electronic carriers 0=1617
 AgBr, rel. to illumination, 77°K 2=23470
 AgBr, rel. to latent-image formation 3=11948
 AgBr, transient, with and without mag. field 3=8529
 AgBr and AgCl, rel. to optical absorption 2=8519
 AgCl 2=21198
 AgCl 3=2969
 AgCl crystals, effect of recrystallization on the temperature dependence 1=3792
 AgCl, and darkening 0=20940
 AgCl, divalent cation impurities effect 2=23473
 AgCl, doped with Cu₂Cl₂ or NiCl₂, at low temp., rel. to trapping 1=7676
 AgCl electrode, photo-impedance 1=14521
 AgCl, electron Hall mobility, down to 4°K 2=23472
 AgCl, electron mobility in high elec. fields 3=8387
 AgCl, hole migration, after air and O₂ annealing 1=1110
 AgCl, under pulsed X-ray irradi., 80-280°K, electron lifetime and mobility 1=3793
 AgCl₂, doped, effect of infrared irradiation 1=14635
 Ag-Cs photocathodes, fatigue effects 1=17805
 AgI 2=21198
 AgI 3=2969
 Ag₂O, spectral distrib. rel. to prep. method 4=22806
 Ag₂S layers, light and dark currents, explanation 4=28647
 Ag₃SbS₃ 4=26152
 AlP 1=17717
 As₂(S-Se-Te)₃ alloys, e.m.f. 2=18731
 As-Se alloy films 0=15991
 As₂Se₃, amorphous films 0=6136, 15949
 As₂Se₃ films 2=18692
 As₂Se₃ films, storage phenomena 4=28638
 As₂Se₃, rel. to Cu and Ag impurity 4=1677
 4As₂Se₃. As₂Te₃ glass 0=15903
 As₂Se₃. Se₂Te₃ glasses 0=15902
 Au films on p-type GaP photoelec. positive hole range 3=908
 BaN₆, u.v., spectral distrib. 3=25450
 Bi 3=8572
 Bi, shallow impurity traps and electron transfer dynamics at low temp. 0=18035
 Bi-Sb alloys 3=8572

Photoconductivity—contd

- Ca halophosphates, colour centre meas. 4=22626
 Ca halophosphates, with Sb and Mn 0=9993
 Ca oxide coated cathodes, spectral sensitivity 2=3073
 CaF₂, photoconductivity, in electric fields 3=20406
 Cd films, electron capture by lattice defects 2=12540
 Cd sulpho-selenide solid solns., imperfections 4=12987
 CdI₂ 0=18066
 CdIn₂S₄ 1=10066
 CdIn₂S₄, Cu and Au activated 1=3786
 CdIn₂S₄, plus Cu 1=14501
 CdIn₂S₄, spectral response, temp. dependence 0=7961
 CdO layers, visible and u.v. regions 0=11758
 CdS 0=20914
 CdS 1=10057
 CdS 2=12541, 14581
 CdS, annealed in vacuum and S vapour 0=18068
 CdS, annealed in var. atmos., Al, In, Ag, Cu, Au-doped 1=12459
 CdS in blocking electrodes, true photocond. 3=17955
 CdS cell, large area 2=8445
 CdS cells, preparation effects, review 4=7064
 CdS cells, slit, γ excitation, in gas discharge 4=4228
 CdS, rel. to crystal growth conditions 1=14963
 CdS crystals, Ohmic contacts problem 4=12984
 CdS crystals, 300°-70°K 3=13202
 CdS crystals, X-ray, spectral distrib. meas. 4=12986
 CdS, Cu impurity effect 2=18740
 CdS, cubic and hexagonal 3=6631
 CdS, current noise and distributed traps 1=7671
 CdS, dark polarization 3=20404
 CdS, decay time, meas. rel. to temp. and illumination 1=19901
 CdS, deformed, spectral response 2=18847
 CdS, effect of crystal thickness, growth conditions and light polarization 1=7666-7
 CdS, effect of deuteron bombardment 0=1662
 CdS, effect of hydrostatic pressure 3=15588
 CdS, effect of optical excitation 1=6176
 CdS, effect of stoichiometric defects 1=14509
 CdS, electron injection and extraction 2=8411
 CdS, enhanced by i.r. and elec. field 1=14508
 CdS evaporated films, props. 4=15567
 CdS, by excitation in fundamental absorption edge, mechanism 1=19900
 CdS, excitation intensity depend., superlinearity 0=16079
 CdS, excitation spectra 4=10122
 CdS, exciton structure, n=1, 2, 3 states obs. 4=7063
 CdS field-effect transistor, free hole density rel. to temperature 3=13137
 CdS, rel. to field emission spectrum 3=16972
 CdS, films 3=22941
 CdS, films, current pulse generator 4=26148
 CdS films, effect of prep. method 1=17793
 CdS films, electron irradi., photoshift 0=7956
 CdS, films, preparation 4=26147
 CdS films, preparation and sensitization 1=11323
 CdS films, with and without Cl doping 1=10058
 CdS, fine structure of response spectrum 1=17794
 CdS, fine structure of spectra 0=7955
 CdS, fluctuations due to shallow traps 0=4369
 CdS, gain, response time, effect of chemisorption, meas. 4=30900
 CdS, gain and trapping studies 4=4223
 CdS, as γ -detector 0=313
 CdS, γ -ray conductivity 2=23457
 CdS, γ -ray conductivity 3=6629
 CdS, γ -ray induced 0=15983
 CdS, due to γ -rays 1=19903
 CdS, H₂ effect 2=649
 CdS, heat-treated in vacuum and O₂ 2=4060
 CdS, high fields in shadow regions 2=23454
 CdS, highly doped, low temp. 1=19874
 CdS, i.r. quenching 0=2910
 CdS, i.r. quenching and new peak 2=16751, 18735
 CdS, image sharpness recognition 4=15573
 CdS, rel. to imperfections. 2=12544
 CdS, improved performance, various methods 0=2908
 CdS, impurity photocond. 2=10523
 CdS, impurity scatt. of electrons 4=1598
 CdS, increase near In, Ga contacts 3=17956
 CdS, induced i.r. impurity cond., rel. to local-level parameters 4=1678

Photoconductivity—contd

- CdS, influence of H atmosphere 2=648
 CdS, infrared quenching 1=14504
 CdS, insulated crystals, meas. by a.c. impedance 0=2906
 CdS, internal friction generation, theory 2=10739
 CdS, after ionic bombardment 1=17721
 CdS, light or X-ray probe pos. effect 2=21191
 CdS, long-range effects, rel. to exciton transport 2=23452
 CdS, long-wavelength sensitivity, rel. to heat treatment 3=17954
 CdS, longitudinal effect 2=23458
 CdS, at low temp. 2=18738, 23455
 CdS, lux-ampere characteristics 1=7669
 CdS, meas. with contact-free microwave method 4=30661
 CdS, mechanism 4=4292
 CdS, "memory" effect 0=1677
 CdS, mixed ambipolar and exciton diffusion 0=13525
 CdS, mobility in, effect of photoexcitation 1=2421
 CdS, modulated excitation, photocond. spectrum 3=23012
 CdS monocrystals 2=647
 CdS monocrystals, effect of glow discharge 2=6600
 CdS, nature of current 4=26146
 CdS, negative 3=903
 CdS, new rectifier effect 4=30657
 CdS, ohmic contact, rel. to intensity 2=8435
 CdS, ohmic contacts, zone scanning 3=17953
 CdS, ohmic and nonohmic contacts 1=14511
 CdS, oscillatory currents in u.s. flux 4=7062
 CdS, phenomenological quantum yield 4=1681
 CdS photocells, lifetime and photochem. reactions 1=5031
 CdS, photocells, preparation methods and efficiency 0=9989
 CdS, photochem. reactions and quenching 2=4062
 CdS photoconductive films, sintered, effect of heat-treatment 1=14505
 CdS, photocurrent saturation meas. 4=10120
 CdS, photoelectret state in single crystal 4=12971
 CdS and photoelectric emission, nonequilibrium 3=19308
 CdS, photoelectromag. effect 2=650
 CdS, photoelectron Hall mobility 4=17528
 CdS, photoelectron trapping coefficient β , determination 3=13130
 CdS, photoexcitation and i.r. quenching, role of contacts 1=19902
 CdS, photoresistors, capacitance, equiv. cct. 4=7081
 CdS, photoresistors, dark conductivity 2=21189, 23456
 CdS photoresistors, improved contacts 4=17536
 CdS, photoresistors, preparation and characteristics 4=26156
 CdS, photosensitivity 0=18037
 CdS, polycryst. films, rel. to sintering 3=904
 CdS, polycryst., photocurrent carriers 3=905
 CdS, polycrystalline layers, activation temp. depend. 4=7061
 CdS, prep. of photosensitive monocrystals 2=16989, 18734
 CdS, pulse excit., effect of background illum. 2=10526
 CdS, pulse generation 4=10123
 CdS, pure and As doped, rel. to hole props. 2=8442
 CdS, quenching effect of photocond. decay 0=20932
 CdS, in recomb. coeff. meas. 1=3761
 CdS, relaxation, effect of trapping levels 0=18067
 CdS, response to 1-100 eV quanta 1=14502
 CdS, response speed and photosensitivity 1=11324
 CdS, review 1=2436
 CdS, saturation 0=13630
 CdS, sensitization by dye films 1=17797
 CdS, shadow region, elec. field effect 3=13131
 CdS, shallow traps, frequency factor and energy distrib. 0=9991
 CdS, short pulse, and trapping levels, fast 3=17846
 CdS single crystal, avalanche breakdown 1=10060
 CdS single crystal, fast recomb. mechanism 4=26144
 CdS single crystals, effect of i.r. radiation 1=7668
 CdS, single crystals, mechanism 0=13632
 CdS single crystals, pulse photoconduction, carrier lifetime 1=11322
 CdS single crystals, surface states rel. to photoconductive process 4=28421
 CdS, sintered cells, fabrication 0=2913
 CdS, sintered film, effect of O on photoconduction 1=12458

Photoconductivity—contd

- CdS, sintered layers 0=2912
 CdS, slow growth, trapping cross-sections 1=5785
 CdS, space-charge-limited currents 1=17792
 CdS, spectra structure and related phenomena 2=8414
 CdS, spectral depend. 3=23395
 CdS, spectral dependence 0=18088
 CdS, spectral distrib., ambient gas effects 0=9992
 CdS, spectral distrib., annealing effects 3=11262
 CdS, spectral distrib., rel. to γ -irrad. 2=10528
 CdS, spectral distrib., mech. 2=18741
 CdS, spectral response, surface treatment effects 0=15984
 CdS, strong elec. field effect 2=10529, 12542
 CdS structure near adsorption edge 1=14510
 CdS, rel. to surface conductivity 1=17799
 CdS, trapping and diffusion in surface region 0=13631
 CdS, 2-4 μ , mechanism 0=14985
 of CdS-type photoconductors in vicinity of absorption edge 1=5024
 CdS in visible light and γ -rays 2=16752, 18736
 CdS, during X-irrad. 2=6497
 CdS, X-ray effect 2=2191
 CdS, X-ray effect on spectral distrib. of current 2=12545
 CdS, X-ray pulse induced, in single crystal 2=12543
 CdS, by X-rays, linearity 2=10530
 CdS: Ag, nonuniform excitation 3=20394
 CdS, CdS: Cu, improvement on growing in Ar 4=1679
 CdS-CdSe, Ag-activated 2=18739
 CdS, CdSe, rel. to crystal growth conditions 1=14963
 CdS and CdSe, rel. to elec. fields 2=6496
 CdS-CdSe, i.r. quenching, temp. and composition depend. 1=6177
 CdS-CdSe, monocrystals 0=7957
 CdS_xCdSe_{1-x}, ohmic and nonohmic contacts 1=14511
 CdS_xCdSe_{1-x}, spectral distrib., 20° and 77°K 1=1104
 CdS-CdSe, transient effects 3=2972
 CdS-CdTe, effect of CdTe 0=621
 CdS: Cu, Ga, photosensitive centre, e.s.r. study 3=23224
 CdS: Cu, Cl, i.r., optical activation 4=28639
 CdS:Ga:Cu, rel. to hole ionization energy of imperfections 0=1663
 CdS:I, vapour-grown, after treatment effects 2=6495
 CdS:I:Cu crystals, gain rel. to photon energy 4=12985
 Cd(S:Se):Cu, spectral response rel. to composition 1=14506
 CdSe, rel. to crystal growth conditions 1=14963
 CdSe, excitation spectra 4=10122
 CdSe, exciton structure, n=1, 2, 3 states obs. 4=7063
 CdSe films, response and dark-sensitivity 4=4229
 CdSe, gas discharge effect 4=30659
 CdSe, heat treatment and impurities effects 2=10531
 CdSe, image sharpness recognition 4=15573
 CdSe, impurity photocond. 2=10523
 CdSe, light or X-ray probe pos. effect 2=21191
 CdSe, longitudinal effect 2=23458
 CdSe, meas. with contact-free microwave method 4=30661
 CdSe, mobility in, effect of photoexcitation 1=2421
 CdSe, negative photodiode effect, 20° and -180°C 3=10889
 CdSe, 0.5-2.5 μ 0=18113
 CdSe, ohmic and nonohmic contacts 1=14511
 CdSe photocond. detector, microwave signal-to-noise ratio 4=30660
 CdSe, photoionization in fundamental absorpt. region 4=26143
 CdSe, photosensitized, i.r. response 0=18061
 CdSe, saturation and osc. effects for local illum. 4=10124
 CdSe single crystals 4=22797
 CdSe single crystals, photoconductive mixing 4=4230
 CdSe, sintered, in light amplifier 0=2973
 CdSe, spectral depend., 77° and 26°K 1=1103
 CdSe, theor. explanation 3=10888
 CdSe + Ag, single crystals, minority carrier lifetime 0=7958
 CdSe-Se junctions, X-ray effect 2=23469
 CdSO₄, effect of CdS inclusion 1=8286
 CdTe, films, effect of additives 3=20407
 CdTe, Hg doping effect 2=16753, 18733
 CdTe, impurity photocond. 2=10523
 CdTe, impurity photocond. kinetics 2=4063
 CdTe, impurity photoconductivity, kinetics 1=19904

Photoconductivity—contd

CdTe, n-type, with In or Ga, max. rel. to photon energy and energy at absorption edge 2=16720
 CdTe, n and p-types 3=15628
 CdTe, p-n junction photocells 0=11723
 CdTe, p-n photocells, u.v. quantum yield 0=15987
 CdTe, p-type 1=12445
 CdTe, photocurrents in p-n junctions 2=680
 CdTe, photosensitized, i.r. response 0=18061
 CdTe-HgTe 1=3708
 CdTe-HgSe, forbidden band width var. 4=4225
 (Cd,Zn)S layers, sintered 3=23016
 (Cd,Zn)S, shift in excitation peak rel. to CdS 1=10061
 Co phthalocyanine crystals, and spectra, absorpt. 3=20495-6
 Cs films, rel. to thickness and temp. 3=15550
 Cs-Bi cpds., photosensitivity 1=15142
 CsBr, containing colour centres 4=4231
 Cs₃Sb, theory 1=17791
 CsSb and Cr₃Sb, spectral sensitivity and effect of O₂ 0=11709
 Cu phthalocyanine crystals, and spectra, absorpt. 3=20495-6
 Cu phthalocyanine meas. 4=10137
 CuCl crystal, rel. to exciton 4=26240
 CuFeS₂ 3=1027
 Cu₂O, carrier recomb. and impurity-centre struct. 2=10615
 Cu₂O, depend. on O content, rel. to semicond. props. 0=6138
 Cu₂O, exciton-induced, structure in photocond. spectrum 1=17800
 Cu₂O, long duration, due to O vacancies 3=18029
 Cu₂O, neg. effect in long-wave region 3=2971
 Cu₂O, negative near point contact 3=20402
 Cu₂O, negative photoconductivity 1=6179
 Cu₂O, quantum yields for inherent and impurity absorption 4=7066
 Cu₂O, relaxation time, temp. var., energy structure 3=20403
 Cu₂O, spectral dependence, at 77°K 1=20005
 Cu₂O, spectral response, effect of surface treatment 0=1679
 Cu₂O, spectral response, fine structure 0=1678

Photoconductivity—contd

Ge, surface states, 170-305°K 1=14434
 Ge, Te-doped, below 150°K, rel. to electron capture and trapping 4=1604
 Ge, temp. depend., surface-state kinetics 0=18021
 Ge, two-carrier, gain and light-dark ratio 4=4221
 Ge-type semiconductors, relaxation characteristics 0=6133
 Ge, universal time constant 1=12460
 Ge, X-ray effects, quantum yield meas. 2=4064
 Ge: Au, kinetics, 55-170°K 4=1684
 Ge—GaAs heterojunctions 4=28586
 Ge—Si alloys, i.r. response, use in detectors 0=2911
 Ge, Zn—Cu-doped, for i.r. recomb. processes 2=8406
 Ge, Zn-doped, carrier lifetime 2=6456, 10467
 Ge, Zn doped, liquid He temps., impurity centre transitions 4=15569
 GeS, photocond. spectrum, 2=21244
 GeS, photocond. spectrum 3=2990
 GeSe 2=8520
 Hg vapour, Joshi effect rel. to irradiation and absorption of light 1=18473
 HgI₂, effect of contacts 1=17789
 HgIn₂S₄ 1=10066
 α-HgS 0=18071
 HgS 2=12583, 14655
 HgS 3=17962
 HgS, α-phase, effect of impurities 4=7073
 HgS, photocond. cells, X-ray effect 2=23469
 α-HgS, 600-100 mμ and X-rays 3=6600
 α-HgS, 600-1000 mμ and X-rays 2=23405
 HgSe, photoelectromag. effect and i.r. detection 2=130
 HgTe—CdTe, i.r. 2=10534
 HgTe—CdTe, 0.6-2 μ 4=15593
 I, space charge limited hole currents 2=14525
 I, sustained space charge limited currents 2=8422
 I vapour, Joshi effect, positive and negative co-occurrence 1=18472
 InAs, 1-7 μ 0=19499
 InP 2=16757, 23465
 InS 2=12547
 In₂S₃, meas. 4=20374
 In₂S₃, spectral response, temp. dependence 0=7961
 InSb cells 1=7653
 InSb, carrier lifetime det. 1=1075
 InSb, electron-hole creation, quantum eff. 2=21195
 InSb, generation-recombination noise 2=8431
 InSb, i.r. detector, nanosec time response 4=8497
 InSb detectors, characteristics 4=14445
 InSb, large-signal effect 4=12989
 InSb, n-type, due to r.f. radiation 2=14583
 InSb, n-type, due to r.f. radiation 3=6634
 InSb, n-type, impurity photocond. 2=8417
 InSb, n-type, impurity photocond. with mm radiation 1=3791
 InSb, osc. in excitation spectrum, and optical phonons 4=17531
 InSb, osc. with photon energy, phonon mechanism 4=17529
 InSb, oscillatory cond. in Ag- and Au-doped crystals 1=12461
 InSb, p-n junctions, effect of surface state 1=19906
 InSb, p-type 0=4370
 InSb, p-type, with deep acceptor impurities 2=8418
 InSb, p-type, noise power spectrum 2=8432
 InSb, photocell, nuclear radiation exposure 0=14881
 InSb, relative quantum efficiency 0=2905
 InSb, review 1=6158
 InSb, single-crystal i.r. detectors 0=8840
 InSb, spectral distrib. 0=16039
 InSb, thin layers, 100°-350°K 4=1685
 InSb, use as detector and optical freq. mixer of laser radiation 4=10131
 K cyanides of Fe, Mn and Ni 0=4372
 K ferricyanide monocrystals, absence 2=3999
 K ferrocyanide monocrystals, absence 2=3999
 K halides, coloured, pulse and steady photocond. 2=8424
 K halides, in fund. absorption range 2=8427
 KBr, additively coloured, pulse 1=11232
 KBr, with anionic impurities 3=25464
 KBr, with Br⁻ ions, hole photocond. 2=8425
 KBr[Cl], excited F_A colour centres, lifetime 4=25974
 KBr, colourless, due to strong elec. field 1=19897
 KBr, colourless, due to strong elec. field 2=8433
 KBr, electrolytically induced 0=6054

Photoconductivity—contd

KBr, Hall effect 1=14385
 KBr, transient, F-centre lifetime 2=6387
 KCl, additively coloured, at >10°K 1=5027
 KCl, additively coloured, transient effect meas. 4=7074
 KCl, colloid centres 0=11634
 KCl, colourless, due to strong elec. field 1=19897
 KCl, colourless, due to strong elec. field 2=8433
 KCl, at cyclotron resonance of 35 Gc/s 3=20149
 KCl, electron Hall mobility, down to 4°K 2=23472
 KCl, F-band bleaching, photoconductive sensitivity 4=20431
 KCl, F-band, rel. to γ-irrad. 3=23020
 KCl, F-centre, decrease on bleaching 0=13553
 KCl, due to F- and F'-centres 2=10535
 KCl, F and M centres 0=20937
 KCl, fundamental absorption tail rel. to temp. and Br content 2=8517
 KCl monocrystals, γ-irrad. 2=4066
 KCl, pulse, at pre-breakdown 2=12572
 KCl, transient, F-centre lifetime 2=6387
 KCl:Tl phosphors 0=8016
 KCl U-centres, exciton-induced 1=10019
 KCl, x-irradiated, photocurrent carrier mobility 1=1108
 K₂Cr₂O₇, photoactivation-photoelectret state rel. 4=30665
 K₂Cr₂O₇, photocond. state study 4=30666
 KI, dark current rel. to plastic deformation 2=4067
 KI, intrinsic 2=8426
 KI, transient, F-centre lifetime 2=6387
 Mg fluorogermanate, enhancement by u.v. irradiation 1=7675
 Mg fluorogermanate, growth, rel. to u.v. irrad. 3=25837
 Mg fluorogermanate, rel. to u.v. irrad. 3=2978
 Mg₂Ge, surface barrier photoresponse 4=26207
 MoS₃, thin crystals at 77°K 3=10957
 Na, soln. in liq. NH₃ 2=2731
 NaBr, colloid centres 0=11634
 NaCl, coloured 0=18072
 NaCl, colourless, due to strong elec. field 1=19897
 NaCl, colourless, due to strong elec. field 2=8433
 NaCl crystals, X-ray 3=4955
 NaCl, polarization and elec.-field distrib. 3=10869
 NaCl, space charge polarization meas. 4=28651
 NaCl, X-irrad. and heat treated 0=6142
 NaCl, X-ray irrad., impurity effects 2=18752
 NaCl, X-rayed, effect of previous heat treatment 1=11326
 Na—DNA, highly polymerized, elec. cond. 4=12840
 Ni phthalocyanine crystals 3=20495-6
 Pb oxide layers 2=6501
 PbI₂ 4=26202
 PbI₂, extinction between 170°-190°C 3=17960
 PbI₂, rel. to photodecomposition 3=2921
 PbO, contact influence on photocond. 2=8412
 PbO films, treated with S, Se, Te, i.r. region 1=3770
 PbO layers 2=2192, 8438
 PbO, n—PbS—p—PbO films, surface, in Resistron charge-storage tubes 3=25419
 PbO, nature of photoactive centres 2=10532
 PbO, optical activation energy, rel. to temp. 3=17978
 PbO, overshoot, space-charge model 2=18748
 PbO single crystals 3=6635
 PbO, rel. to surface sorption 2=4065, 8439
 PbO, Vidicon target, fatigue model 2=23466
 PbS 3=2977
 PbS, angular response in i.r. 2=21196
 PbS, cells, current fluctuations 0=7964
 PbS, cells, effect of temp. on response 0=7965
 PbS, cells, nuclear radiation exposure 0=14881
 PbS, chemically precipitated 0=619
 PbS, correl. with i.r. recombination radiation 2=8440
 PbS, decay time, temp. dependence 1=7674
 PbS, detector in near i.r. atomic spectrograph 2=2879
 PbS films 1=1080
 PbS, films, hole mobility and crystal size 0=20935
 PbS, films, noise and signal response 0=7963
 PbS films, quantum yield, spectral meas. 4=12990
 PbS films, slow component in strong light 4=12991
 PbS films, at 10¹⁰ c.s. temp. depend. 2=6500, 10533
 PbS i.r. photocell for stellar photometry 1=36
 PbS, i.r. photocells, polycrystalline 0=7962
 PbSe, i.r., polycrystalline 0=7962

Photoconductivity—contd

- PbS layers 2=18750, 23467
 PbS layers, excess conductivity 4=7072
 PbS layers, for i.r. detect., prep. and performance 4=1695
 PbS layers, rel. to intercrystallite energy barriers 4=4233
 PbS, layers, 10 Gc/s 0=18050
 PbS, layers, p-n junctions 0=10934
 PbS, 1-6 μ 1=1107
 PbS photoconductors, surface properties 1=1106
 PbS photodetectors, model for 4=7082-3
 PbS, photoresistance 2=18749
 PbS photoresistors, local sensitivity 1=14515
 PbS photosensitive surface, rectifying action 1=7673
 PbS point diodes, photocurrent excitation for const. voltage, transient region 4=7071
 PbS, sensitized surfaces, majority carrier model 2=6499
 PbS, rel. to surface props. 1=17802
 PbS, var. with incidence 4=7070
 PbS, 584-3000A 2=8429
 PbS:Ti₂S evap. films, spectral response 3=23018
 PbSe films, doped with Ag 1=8956
 PbSe layers 1=2547
 PbSe layers, sensitive to 4.8 μ 3=15633
 PbSe, 1-6 μ 1=1107
 PbSe, photocond. detectors 2=8447
 PbSe, spectral response, crystal size effects 0=11727
 PbTe, i.r. polycrystalline 0=7962
 PbTe, 1-6 μ 1=1107
 PbTe, photocell, nuclear radiation exposure 0=14881
 PbTe, photoresistors, stoichiometric preparation 0=9996
 PbTe, spectral response, crystal size effects 0=11727
 RbI, intrinsic 2=8426
 S, films on glass, effect of Hg vapour 0=18073
 S, monocrystals, 4400-9000A 0=7918
 S single crystal, up to 10 000 atm 4=10136
 SbI₃ 4=1720
 Sb₂S₃, amorphous layers, mechanism 0=15949
 Sb₂S₃ films, effect of thickness 1=14499
 Sb₂S₃, impurities, influence 1=19898
 Sb₂S₃, impurities, influence 2=4058
 Sb₂S₃, kinetics, -100° to +100° C 3=20398
 Sb₂S₃, kinetics at room temp. 2=23450
 Sb₂S₃, kinetics at room temp. 3=6627
 Sb₂S₃ layers 4=4227
 Sb₂S₃, photoelectronic analysis 0=6139
 Sb₂S₃, spectral and temp. depend. 2=8350
 Sb₂S₃-Bi₂S₃ films, spectral distrib. 0=601
 Sb₂S₃-Sb₂Se₃ layers, spatial charge redistribution 1=14500
 Sb₂S₃-Sb₂Se₃ layers, spatial charge redistribution 1=17790
 Sb₂S₃-Sb₂Te₃ system 2=18732
 Sb₂S₃-Sb₂Te₃ system 3=15585
 Sb₂Se₃, 400-1200 m μ 0=620
 Sb₂Se₃, photocurrent 2=6461
 Sb₂Se₃, photosensitized, i.r. response 0=18061
 Sb₂Se₃, spectral distrib. temp. depend. 0=599
 Se, amorphous films 0=15991
 Se, amorphous, films 2=16823
 Se, amorphous, Hg-treated, trapping levels 4=1686
 Se, amorphous, photocarrier mobility meas. 2=10537
 Se, amorphous, spectral distrib. of anomalous photocond. 4=30667
 Se, cells, thermodynam. props. meas., differential microcalorimeter 0=10813
 Se, current-voltage, rel. to space-charge lim. currents 4=1619
 Se, effect of Tl and TlCl 0=7966
 Se films, space-charge limited currents meas. 4=20432
 Se films, Hg-bearing, amorphous, non-photoconductive layers 1=14517
 Se films, Hg-bearing, amorphous, non-photoconductive layers 1=17803
 Se, hexagonal, photocurrent rel. to saturation applied field 4=10133
 Se, hole photosensitivity 0=6134
 Se, negative, quenching effects 1=19909
 Se photocells, turnover phenomena 3=6607
 Se, photo-excitation and carrier-trapping meas. 4=22804
 Se, spectral distrib., rel. to band struct. 2=23107
 Se, vitreous, positive and neg. response 3=13081
 Se xerographic plate, photoinduced discharge 3=15613

Photoconductivity—contd

- Si, charge-carrier diffusion length 0=9965
 Si, decay, effect of Cu and quenching from 800° C on recombination 1=17707
 Si, decay of spreading resist. meas. 4=1610
 Si, doped with Ga, In, Sb, recombination processes 2=8397
 Si, field effect, condenser photo-e. m. f. 2=6498
 Si, rel. to Hg, W, Mo, Pt impurities 4=10067
 Si, In-doped, decay 3=17833
 Si, internal photoeffect, rel. to microhardness 4=4463
 Si, lux-ampere characteristics, rel. to trapping levels 4=10134
 Si, modulation, carrier diffusion length meas. 3=20313
 Si, n- and p-type, remnant impurity photocond. 3=23022
 Si, n-type, rel. to fast-electron irradi. 4=1687
 Si, n-type monocrystals 0=6141
 Si, n-type, shallow-imp.-doped, trapping lifetimes and extrinsic photocond. 2=8421
 Si, negative effect 2=652, 23474
 Si, rel. to neutron irradi. 2=8396
 Si, neutron-irradi. p-type, kinetics 2=8401, 10536
 Si, nonlinear effects rel. to surface states 2=10538
 Si, oscillatory decay, on increasing sweeping current 4=4234
 Si p-n junction, spectral dependence minimum 4=10078
 Si, p-n junctions, photoresponse 0=18031
 Si, p-n junctions, photoresponse near band edge 3=10848
 Si, p-n junctions, spectral photoresponse 3=13135
 Si p-n photocell, 650 MeV proton effect 4=28648
 Si, p-type, minority-carrier lifetime 1=3758
 Si, p-type, neutron-irradi., defect level calc. 2=651
 Si, p-type, nonlinear depend. 3=2979
 Si, photocells, reduction of reflection coeff. by SiO₂ layer 0=10031
 Si, photocells, surface-barrier, props. 2=18754
 Si photoelements, effect of crystal orientation 1=1109
 Si, photo-ionization, quantum yield, wavelength and temp. depend. 0=15993
 Si, quantum efficiency, impact ionization 3=20416
 Si, quantum efficiency, spectral and temp. depend. 0=13638
 Si, rel. to recombination velocity 1=17709
 Si, solar cells 2=10544
 Si, surface-barrier diodes 2=2195
 Si real surface, light-excited, relaxation, 190°-620°K 4=10066
 Si, spectral response 3=13134
 Si, stationary, and recombination velocity 1=14518
 Si, stationary, and recombination velocity 1=17804
 Si, structural defects after electron irradi. 3=22764
 Si, surface, minority carrier trapping 3=20415
 Si, and surface recomb., effect of etching 4=4174
 Si, α -trapping centres in n-type, max. after annealing 1=14457
 Si, vacuum-cleaned surfaces 1=1066
 Si, Zn-doped, n-type, carrier recombination, 90°-200°K 4=6986
 Si, Au- and Cu-doped, rel. to activation by simple defects 4=10135
 Si-Au reversed-biased surface barrier diodes, oscillation under continuous illumination 4=4236
 SiC, α -modification 2=8441, 14584
 SiC, n- and p-type, kinetics 3=8571
 SiC, n and p-type, relaxation 3=15634
 SiC, p and n-type, spectral response 3=13136
 SiC, photo-e. m. f. due to impurity and intrinsic excitation 2=10539
 SrNa₂ u.v., spectral distrib. 3=25450
 SrO.2B₂O₃ and SrO.4B₂O₃, lead-activated, by u.v. excitation 3=2925
 Ta₂O₅ 1=12498
 Te, electron lifetime and surface recombination velocity 3=877
 Te, generation-recombination noise 2=8431
 Te, photocond. decay, carrier recombination and trapping 0=6143
 Te, in radiation detector, sensitivity 2=7460
 Te, single-crystal i.r. detectors 0=8840
 Te single crystals 4=12994
 TiO₂, rutile 3=17963
 TiO₂(rutile), chemisorbed O₂ effect 4=22800
 TlAsSe₃, glassy effect of I and Ge impurities 3=15635
 Tl(Br, I), 21° to 90°K 1=19911
 TlCl, low temp. 3=10891

Photoconductivity—contd

- TlCl, spectrum 4=17609
 TlI, dye sensitized, rel. to temp. 4=12993
 Tl₂S, collision recomb. in decay of photoconductivity 1=12463
 Tl₂S, i.r. photocells, polycrystalline 0=7962
 TlSe, kinetics, rel. to local recombination and trapping centres 4=1609
 Tl₂Se, As₂Se₃, glasses 0=15902
 Tl₂SeAs₂Te₃, vitreous, retained in dark 3=20418
 Zn oxide, effect of photo desorption of oxygen 2=12548
 ZnCdS, with grain boundary layers, a.c. 2=21184
 ZnIn₂S₄ 1=10066
 ZnIn₂S₄, absorption edge, max. response, current rise-time 2=23475
 ZnIn₂S₄ and ZnIn₂S₄: Cu single crystals 4=28738
 ZnO, adsorption effect 2=16759, 18753
 ZnO, decay 1=11327
 ZnO, decay kinetics, chemisorption model 2=2193
 ZnO, field effect mobility, effect of light 2=16733
 ZnO, films, sensitization with eosin 4=15570
 ZnO, kinetics, effect of binders 3=17964
 ZnO, O photodesorption study, temp. depend. 0=18074
 ZnO, optically sensitized 2=10540
 ZnO, photodielectric effect, 3rd type 3=23023
 ZnO, ruby-laser induced 4=26153
 ZnO, as surface phenomenon 2=8415
 ZnS, monocrystals, high-voltage photoemission 0=15995
 ZnS phosphors 3=25487
 ZnS phosphors, u.v.-excited, i.r. effects 3=23110
 ZnS, space-charge-limited currents 1=17792
 ZnS:Al³⁺, correl. with e.s.r. meas., model 3=18128
 ZnS—CdS mixed monocrystals, composition depend., spectral response 1=1111
 ZnS—CdS, 3400–5100 Å, CdS depend. 2=6502
 ZnS: Cu, Cl, from capacitance changes, rel. to green and blue emissions 3=911
 ZnS:Cu, comparison with luminescent properties 1=10112
 ZnS:Cu, i.r. enhancement and quenching 1=6182
 ZnS:Cu, rel. to luminescence 3=25422
 ZnS:Cu, partly-illuminated, meas. reproducibility 2=23476
 ZnS:Cu, u.v. irradiat. 3=15614
 ZnS:Cu/Cl, rel. to preparation method 2=2253
 ZnS:Cu:Co, i.r. sensitivity, mech. 2=12627
 ZnS:Cu:Pb:Cl, rel. to luminesc. 2=4071
 ZnS:Gd, trapping, paramag. resonance detection 0=11729
 ZnS:In crystals 4=7189
 Zn Se, negative photocond., mechanism 1=2426
 ZnSe, photoelec. and opt. props. (400–800 mμ) 0=13671
 ZnSe—CdSe, spectral response 0=15996
 ZnTe, photoelec. and opt. props. (400–800 mμ) 0=13671

- alkali antimonide 4=573
 alkali halide phosphors, excited by u.v. 2=22250
 alkali metal azides, 1400–10 000 Å 3=25415
 alkali metal—Sb [Bi] cpds, energy distrib. 4=3028
 alkali metals, volume effect, theory 2=3074
 angular distribution, rel. to γ-ray energy 4=3808
 atomic Au, ang. distrib. from L subshells 4=30389
 atomic, a.g. distrib. calc., relativistic 4=25542
 atomic, in determination of h/e 3=1575

Photoelectric emission—contd

atomic, forward emission, theory 2=20755
 atoms, K-shell, forward and backward 3=2588
 atomic, K-shell, high-energy calc. 3=12773
 atomic, meas., reduction of Compton back-ground 4=30210
 atomic, photoelectric edges, apparent positions 4=12389
 atoms, K-shell cross-sections, 200 keV-2 MeV 4=17254
 borosilicate glass, induced by high intensity laser beam 4=14749
 cathode, massive, X-ray photoeffect rel. to fluorescence yield 3=6663
 cathode, X-ray photoeffect, rel. to fluorescence yield 2=14704
 cathodes, dielectric, X-ray 3=19311
 from charged particles 3=9731
 for chemical analysis, using X-rays 4=23686
 convertors, photon-electron, energy distribution 4=24730
 crystal momentum conservation implications 4=14746
 delayed, rel. to electron trap analysis 2=3892
 distribution, not Poisson for Poisson incident photons 4=19085
 dye coatings, kinetic energy distrib. 2=5371, 11695
 electron distrib. from partially polarized Gaussian light 4=19084
 electron motion near conductors 4=3108
 films, alkali antimonide, electron diffraction camera 4=15785
 films, Cs₃Sb, K₃Sb, (Na₂K)Sb, (Na₂K)CsSb, effect of n irradiation 3=14632
 gases, electronegative, photoelectric current, meas., accuracy 4=14572
 Geiger-Müller counters, photoelectron back diffusion 4=19326
 K-shell, for γ -rays of 0.5 MeV 3=2587
 K-shell, saddle point calc. for multiple integrals 4=28144
 metal films, on Si, rel. to photon energy 2=22251
 metal surfaces on alkali halide crystals, meas. 4=11696
 metals, energy distrib., calc. 2=3071
 metals, films, and electrons and holes, hot, m.f.p. 3=20264
 metals, into liquid dielectrics, var. with illumination, electric field 4=571
 metals, measurement and O₂ and H₂O effects 2=17868
 metallic contact to CdS single crystals 4=12853
 microscope, for luminescence study 4=7167
 mobility of electrons, effect of space charge 4=11255
 multialkali metal oxide cathodes, emission characteristics 4=8813
 multialkali metals, sensitivity enhancement by mirrors 4=8815
 opaque objects, meas., electronic camera 2=13590
 optical signals, modulated, detect. 4=21271
 organic semiconductors 4=574
 photocathodes, activation 2=9615
 photocathodes, complex, quantum yield 4=8809
 photocathodes, for solar short-wave radiation 2=19299
 photocathodes, under X-rays 2=13589, 17866
 photo-exoemission, effect of temp. 4=24732
 in photographic process 2=1284
 photomultiplier electron transit times 4=29966
 photomultipliers, Venetian blind-type, noise 4=29965
 phototubes, pulse operation 4=576
 polarization effect, study with electron image converter 2=7647
 quartz, after crushing and coloration 3=14634
 quartz, induced by high intensity laser beam 4=14749
 review 4=11698
 from semiconductor surfaces, law 3=7633
 semiconductors, rel. to BaO adsorption 2=22241
 semiconductors, photoemission from space-charge region, theory 2=2132
 semiconductors, review 3=19312
 semiconductors, theory 2=17870-1
 silica, fused, excitation by u.v. 4=8806
 solid-state photodetectors for coherent light 4=15574
 spectrochemical analysis, intensity-conc. dependence 4=29239
 surface effect, rel. to secondary emission by surface effect 4=19090
 transport of excited electrons, integral eqn. 4=8829
 X-ray effect, using pulse-amplitude distrib. analysis 3=19309

Photoelectric emission—contd

X-rays, 0.7-30 keV 3=14638
 Ar shock tube, from walls, precursor creation 4=18340
 Ag films, dispersed 2=11698
 Ag films, by X-rays, 0.28-9 keV, effective depth 3=21864
 Ag films, yield meas. 2=17867
 Ag halides 3=12940
 from Ag layers, thin, by γ -rays, ang. distrib. 3=8204
 Ag, thin layers, emission velocity distrib. 3=9835
 Ag, X-rays, 0.7-30 keV 3=14638
 Ag-O-Cs photocathodes, threshold spectral sensitivity region rel. to layer structure 4=11694
 AgS photocells, FESSU, characteristics 4=17539
 Al, Ag, Ta and W, yield for soft X-rays 2=208
 Al films 2=5369
 Al films, yield meas. 2=17867
 Al, photo-exoemission, effect of temp. 4=24732
 Al, thin layers, emission velocity distrib. 3=9835
 Al, X-rays, 0.7-30 keV 3=14638
 Al₂O₃ films, delayed thickness var. 4=24733
 Au films, depth depend. 2=1482
 Au films, efficiency rel. to thickness and obs. wavelength 4=3030
 Au films, rel. to film thickness 3=425
 Au films, by X-rays, 0.28-9 keV, effective depth 3=21864
 Au films, yield and work function 3=426
 Au, Ge, Cu, X-ray excited, energy distrib. rel. to secondary emission 4=8808
 Au, rel. to range-energy reln. of hot electrons 4=22534
 Ba adsorpt. on polycryst. Au, characts. 4=24731
 Ba layers on W, in polarized light 4=8810
 BaNb₃ u.v., spectral distrib. 3=24550
 BaO, expts. 4=29964
 Be films, by X-rays, 0.28-9 keV, effective depth 3=21864
 BeO layers, external photoeffect 3=24337
 from Bi layers, thin, by γ -rays, ang. distrib. 3=8204
 C atoms, photoionization cross-sections, calc. 4=25543
 Ca oxide coated cathodes, spectral sensitivity 2=3073
 CaCO₃ (Iceland spar), after crushing and coloration 3=14634
 CaF₂ (flourite), after crushing and coloration 3=14634
 Cd, thin films and single crystals 4=22849
 Cd, vacuum u.v., crystals and films 4=7119
 CdS 4=1724
 CdS, exciton induction rel. to electron spectrum 2=5372
 CdS, nonequilibrium and photoconductivity 3=19308
 CdS, quantum yield, spectral dependence 2=22252
 CdTe, current v. photon energy tail, rel. to impurities 2=9620
 CdTe thin films 4=22857
 CdTe and CdS, props. relation 2=9620
 Cr films, depth depend. 2=1482
 Cr, by X-rays, effect of X-ray polarization 3=14630
 Cr₂O₃, energy distrib. 2=5370, 11694
 Cs polycyclic aromatic cpds. 3=16975
 Cs, pure, in u.h.v., and work function 4=11697
 CsAu, 1.6-6.2 eV, band structure 2=5373
 Cs-Rb-Sb cathode 4=27564
 Cs-Sb, composition depend. 4=26142
 Cs-Sb film, ang. distrib. 3=19313
 Cs-Sb films, rel. to composition 3=8495
 Cs₃Sb cathode, var. with colour 4=8807
 Cs₃Sb cathodes 2=13585
 Cs₃Sb cathodes, efficiency in polarized light 2=5374
 Cs₃Sb, film, effect of n irradiation 3=14632
 Cs₃Sb, semiconducting, anomaly 4=572
 Cu, and crystal electron band struct. 4=20242
 Cu, in region around K-absorption edge 3=6351
 Cu, X-rays, 0.7-30 keV 3=14638
 GaAs 2=11696-7, 13587-8
 GaAs thin films 4=22857
 Ge, calc. from energy bands 4=20247
 Ge, electron beam caused threshold shift towards longer wavelengths 3=19314
 Ge films, by X-rays, 0.28-9 keV, effective depth 3=21864
 Ge and Si, momentum conservation, polarization evidence 4=14748
 InAs, spectral characteristics, rel. to adsorpt. of BaO 2=1483
 K, normal and selective effects, energy distrib. calc. 2=3075
 K α emission, from layer adsorbed on Pt 2=22272
 K films, depth depend. 2=1482
 KBr:In, heat treatment effect 4=1766

Photoelectric emission—contd

- KCl, extreme u.v., 10-50 eV meas. 4=3032
 KCl films, by X-rays, 0.28-9 keV, effective depth 3=21864
 KCl, X-ray effect, Auger fields for Cl and K 3=14633
 K-Sb films, rel. to composition 3=8495
 K₂Sb, film, effect of n irradiation 3=14632
 LiF, extreme u.v., 10-50 eV meas. 4=3032
 Mg, films, energy distrib., var. with wavelength, thickness 4=575
 Mg, thin layers, yield 4=16522
 Mg₃Sb₂, 248-800 μ 2=2213
 Mg₂Sn, spectral characteristics, rel. to adsorpt. of BaO 2=1483
 Mo, in Ar, Ne, work functions 4=568
 Mo, rel. to angle of incidence and polarization state of radiation 4=11695
 Mo, field depend. 2=7643
 NaBr:In, heat treatment effect 4=1766
 NaCl crystals, additively coloured, elec. field effect 4=24721
 Na₂CO₃ 3=19306
 (Na₂K)Sb, (Na₂K)CsSb, film, effect of n irradiation 3=14632
 Nd, ang. distrib. 2=7646
 Nd, ang. distrib. 3=5694
 Ni ribbon, temp. var., anomalous near Curie point 4=3031
 Ni sheet, extreme u.v., 10-50 eV meas. 4=3032
 Ni, in Ar, Ne, work functions 4=568
 NiO, energy distrib. 2=5370, 11694
 PbS 2=8429
 PbS, in near and vac. u.v., yield and distrib. 4=5698
 PbS, vacuum u.v. 3=8596
 Pt, X-rays, 0.7-30 keV 3=14638
 Sb-Cs, dark? 3=9836
 SbCs₃ cathode, fatigue 2=15945
 Sb₂Se₃ 2=9621
 Se photocells, cosine error correction 4=18376
 Si 2=17871-2
 Si, rel. to band bending 3=9834
 Si, band structure, electron, determ. 3=6491
 Si, calc. from energy bands 4=20247
 Si, rel. to energy band structure 3=4960
 Si, influence of band bending 2=23367
 Si surfaces, cleaved, heated and sputtered, comparison of props. 4=14747
 Si, volume and surface effects, rel. to doping 3=9833
 SiO₂, polarized light effect 2=7648
 Sn, into Ge 2=7645
 SrNb₃, u.v., spectral distrib. 3=25450
 from SrO-coated cathodes 3=12238
 Te thin films 4=22897
 Ti, by X-rays, effect of X-ray polarization 3=14630
 U, ang. distrib. 2=7646
 U, ang. distrib. 3=5694
 U, changes at phase transformations 2=3072
 W, BaO-coated 2=13586
 W cathode, 10-50 eV 3=14631
 W points, laser induced 4=8811
 ZnO, energy distrib. 2=5370, 11694
 ZnS, var. with excitation energy, and reflection coeff. 4=7161
 ZnTe, asymmetries for (111) and ($\bar{1}\bar{1}\bar{1}$) faces 2=7644

Photoelectricity

 ZnS:Mn, rel. to red luminescence 3=15711
 ZnTe films, photoelec. props. 0=15986

Photoelectromagnetic effects

- (Heading introduced in 1962)
 apparatus for meas. 3=7411
 crystals, e.m. waves, allowance for surface excitons 3=20465
 metal cathodes, X-ray, secondary emission effects 3=19310
 monopolar, non-stationary 2=4073
 organic single crystals 2=8428
 p-n junctions, photomag. effect 3=2980
 p-n junctions, photomag. effects 2=6503
 p-n junctions, theory 3=17965
 photomagnetic effect, in semiconductor parameter meas. 4=1585
 semiconductors, graded-gap, calc. and meas. 3=17951
 semiconductors with non-equil. concns. 3=17841
 semiconductors with nonparabolic band structures, theory 4=22799
 semiconductors, photocond. compensation of photomag. effect 2=18669
 semiconductors, theory 2=23479
 semiconductors, theory 3=6637
 semiconductors, volume effect 2=23478
 theory for large signals 2=4074
 Bi 3=8572
 Bi, laminar 2=14586
 Bi-Sb alloys 3=8572
 Cd_xHg_{1-x}Te solid solution, i.r. spectra, rel. to composition 3=17997
 CdS, anomaly, rel. to hot electrons 2=8443
 CdS crystals, 300°-70°K 3=13202
 CdS, photo-Hall effect 2=8408
 CdS, pure and As doped, rel. to hole props. 2=8442
 CdSe, photo-Hall effect 2=8408-9
 CdTe-HgSe, forbidden band width var. 4=4225
 Cu₂O, spectral behaviour rel. to band structure 2=10541
 GaAs, 140-300°K 2=4075
 GaAs, photo-Hall effect 2=8408
 GaAs, semi-insulating 2=8395
 Ge, Au-doped, n-type 2=8420, 18675, 21131
 Ge, Au and Mn doped 2=8398
 Ge elements, prep. by optical polishing 3=4956
 Ge and excess-carrier lifetime, depend. on majority density 3=17848
 Ge, long-term variation 4=10129
 Ge, n-type, odd and even, in high fields 4=10130
 Ge, odd effect 2=2194, 23481
 Ge, rel. to photoconductivity 4=26150
 Ge single crystals, e.m.f., time and thickness depend. 3=17966
 HgSe, i.r. detection 2=130
 InP 2=16757, 23465
 InP, photo-Hall effect 2=8408
 InSb, in alternating field, at room temp. 2=23480
 InSb, in alternating field at room temp. 3=8638
 InSb, due to carrier recomb., theory 4=20430
 InSb, i.r. detector, nanosec. time response 4=8497
 InSb, noise 2=4036, 6466
 InSb, p-type 2=16725, 18708
 InSb, p-type, at 80°K, departure from theory 2=4074
 InSb, 6° to 77°K 4=7069
 InSb, stationary, theory 4=22799
 PbS 3=2977
 Se, vitreous, photo-Hall effect, n-type cond. 4=22805
 Si, p-type, nonlinear depend. 3=2979

Photoelectromagnetic effects—contd

 photographic 4=21301
 photographic, grain size importance 0=150
 photographic, of large areas, use in astronomy 1=18560
 photographic, of large areas of images 2=22071
 photographic, use in porosity determination 1=12660
 photographic, simple method, fogging exposure meas. 3=18959
 photographic, slit width effect on background correctn. 3=1843
 photographic, wide-range 3=9575
 photometric equivalent of radiation for scotopic vision 1=9229
 photometric scale rel. to the radiometric 4=11323
 photomultipliers, hum. cancellation, due to light source 3=24177
 photon counters for u.v. 0=3598
 photon detection, time-correlated, by coincidence counter 0=12468
 photovoltaic cell amplifier, transistor 3=19134
 planet Jupiter, electronic camera, surface features 3=18612
 planet Mars 3=18600
 planet Mars 3=18601
 planet Saturn, electronic camera, surface features 3=18612
 planet, Venus 3=18622
 planets, major, colour, photoelectric obs. 3=16342
 planets, Mars, Venus, Moon, multi-colour program 3=16340
 planimeter, photoelec., for leaves 4=8006
 plasma emission, radial distrib. 1=11937
 primary standards of light 2=15715
 radiometer calibration, methods 2=19672
 radiometry, optical 3=11880
 receivers near sources, collection efficiency 4=2820
 reflectance standard 3=1786
 resolution of two sources of strongly different intensities 0=8776
 rotating shutter for beam modulation 1=6956
 scintillators, large, light-yield meas. 3=24001
 semiconductor diodes for, appl. of photomagnetomech. effect 2=6483
 sharpness recognition, by CdS and CdSe photocond. cells 4=15573
 solar cells calibration for GaAs laser meas. 4=16705
 solar surface, correction for scattered light 2=7004
 sources, standard homogeneous, isotropic, total quantum flux 4=5357
 spectrophotometers, i.r., photometric calibr. 4=8413
 standards and unit of light, review and work of NPL 2=19673
 star trail photographs for rapid var. detection 4=13879
 stars, colour, atmospheric extinction 4=26905
 stars, giants and supergiants, 3-colour 3=9225
 stellar, characteristic curve in focal method 0=18795
 stellar, use of emulsion thickness for intensity meas. 0=1049
 stellar, infrared 2=4709
 stellar, photoelectric, as Eridani 0=12311
 stellar, photoelectric, wide pass-band, role of absorption lines 0=14440
 stellar photographic magnitudes, transformation 1=7971
 stellar, R Canus Majoris 0=14441
 stellar, at 10μ 4=23860
 stellar, three-colour, AO Cassiopeiae 0=12310
 sunspots, sun, lines and colour temp. 3=18627
 telephotometric systems, review 3=23655
 terminology 4=5361
 three-colour, in astronomy, stellar appl. 2=11100
 three-colour, of black body 0=8513
 time resolution, photoelectric 4=11340
 toroidal fluorescent lamps, light distrib. 0=14785
 total fluxes due to mutual reflections between diffusing surfaces 1=5337
 tungsten lamps, radiant intensity derivation 0=205
 two luminous fields, illumination equality control 3=21514

Photometry—contd

variable shutter device for optical transmission meas. 1=18561
 Venus, in u.v. and i.r. 0=8490
 very faint stars, observ. limitation 3=16317
 voltage stabilizer, electrolytic cell operation 2=19832
 in weight determination of submicroscopic particles 2=7164
 xerographic, reciprocity failure in ZnO and Se 0=6956
 zodiacal light, three-colour photometry 1=5146
 MgO smoked plate, luminance factor 2=15716
 Ne, gas discharge tube, line-source, ang. distrib. 3=16757

light sources

calibration, radioactivated source 4=20862
 extended, light collection and calibration 0=10747
 flame, for absorpt. meas., burner 2=21601
 flash lamp optical, quality, pre-excitation effect 4=11337
 full-radiator lamp to replace W strip as pyrometric standard 4=24336
 low-level, for photoelectric photometry 0=19358
 standard, primary, diffraction in meas. 4=14329
 test pattern source for image tubes, variable-pattern 4=16201
 voltage stabilizer 3=9698
 voltage stabilizer 3=16888
 Xe lamp, standard, pulsed, high intensity source 3=24000

Photomultipliers

(Heading introduced in 1961)
 Allen-type, use for photoelectric emission yield measurements 1=13109
 amplitude fluctuations gain/potential distrib. between dynodes, 56 AVP 3=21866
 amplitude resolution, pulsed light source 2=7649
 anode current dependence on magnetic field 4=16529
 astronomical pulse-counting appl. 3=9146
 astronomical, temp. regulation and effects 3=5695
 astronomical, temperature effects 4=10804
 for automatic nuclear track analysis 2=3234
 behaviour against short light-pulses 2=1487
 in brightness temp. measurement 2=11522
 calibration, absolute 1=4429
 choice of operating mode 3=16977
 circuit for output stage 3=24185
 circuits, for precision spectrophotometry 4=11497
 coincidence cct. for slow phosphors 1=4539
 with continuous strip surfaces 2=18009
 cooling apparatus 4=19089
 coupled with interferometer, for plasma temp. meas. 4=18913
 current and voltage pulse maxima 4=16527
 dark current, mechanism, meas. 1=2998
 dark-current reduction by cooling to -196°C in cryostat 3=19316
 dark currents, rel. to residual gas pressure 4=21564
 use in determ. of instant of photon emission 1=6948
 developments 2=18007
 discrimination between fast neutron and γ -ray pulses 2=13818
 dynode secondary emission, field enhanced, for high-speed counting 2=18008
 dynode, venetian blind type 2=5375
 dynode voltage regulator, transistorized 4=8818
 dynodes, use of KCl films 4=11702
 electron multiplication statistics 1=4636
 electron, statistical properties 3=19317
 electron transit times 4=29966
 end-window types, response, temp. and wavelength depend. 1=2999
 evaluation, rapid test set 2=3076
 FEU-33, time parameters 3=1805
 FEU-52 and FEU-53 3=2020
 fast-acting, optimum resolving time 4=578
 fast clipped pulse production 1=16386
 fast response, high gain, for scintillation counting 1=5492
 fatigue and saturation behaviour 4=3034
 fatigue, identification with Malter effect 4=8819
 53 AVP type, with NaI crystal, gain 1=19065
 54 AVP, use in capture γ -ray detection 1=16385
 56 AVP, 14 stage photomultiplier 4=16528
 flat front window 2=20019
 flexible connecting light pipes 4=18393

Photomultipliers—contd

fluctuations compared with effects of spectral amplitude selection 1=16073
 fluctuations in counting rate, l.f. 3=7634
 fluctuations, single electron, increase with cathode—first dynode voltage 4=19088
 use in frequency transformation 4=16531
 gain, rel. to pulse height, time intervals 2=15946
 gain, resolution, depend. on counting rate 3=9838
 gain stabilization 2=2979, 5609
 gain stabilization circuit 3=24174
 gain variations, reversible, by different counting rates 2=1486
 γ -ray and X-ray detector for 0.1-3 MeV 3=4373
 for γ -rays, low-energy 2=18096
 gating circuit for, linear 2=2988
 gating method, fluorescence lifetime meas. 1=2458
 gating by μ sec pulses 4=16526
 grid-controlled, properties and applications 2=1488
 high-current operator of R.C.A. type 2059 3=9840
 high-current output, for γ -scintillation counters 1=2997
 high-speed, for nuclear physics 2=18005
 high-temperature operation, in oil-well logging 1=2996
 Hornyak buttons, γ -backgnd. rejection 2=18013
 i.r., intermittent response 3=7635
 i.r., slow transient response 2=17873
 image converters 1=7092
 image intensifiers 1=5126
 image intensifiers 1=7092
 in image intensifiers, channelled systems 1=3002
 image intensifiers, review 1=16390
 image intensifiers, transmission secondary emission image 2=18010
 in image intensifiers, with transmitted secondary-electron mult., for low light-levels 1=3001
 in image intensifiers, with transmitted secondary-electron mult. 1=3000
 in image intensifiers, 2- and 3-stages, electrostatic focusing 1=7090
 intrinsic noise control 3=14639
 irradiance linearity corrections 4=11699
 Lallemant, spectral sensitivity variation 3=19315
 as light modulation detectors, 56 AVP 3=21509
 light pulse adjustment 2=7650
 use of light-pulse generator for obs. of performance 4=16530
 light source, pulsed, short, for meas. resolution 3=9586
 light source (W lamp) hum cancellation 3=24177
 Louvre-type, light pulse characteristics 3=9837
 magneto-optical double resonance detector units 3=5533
 manufacturing developments 1=16384
 measurement of stability, two-channel 4=24734
 millimicrosecond, time and amplitude props. 2=22254
 nanosecond period light-pulse meas. 4=3033
 noise reduction, for use in β -ray spectrometer 2=22243
 use in obs. of phase transitions in incandescent materials 4=2872
 operating characteristics for large-diameter 4=24735
 operating characteristics, 7 in. diameter 3=19319
 optimum working conditions det. 3=9839
 output current pulses, amplitude distrib. 3=19320
 output modulation circuit 3=3979
 parameter dependence on temp. 4=579
 particle detectors, for mag. analyzers 3=19508
 photocathodes, dynamic fatigue investig. 4=8816
 photodetectors, u.v., description 3=7337
 photoelectronic image intensifiers, review 1=16389
 photometry applications 1=1805
 for photometry, time resolution 4=11340
 photomultiplier, modification for use in u.v. 1=13117
 photomultipliers, influence of temperature 1=1908
 photomultipliers, behaviour to h.f. light modulation 1=2991
 photon detector for scintillation counting 1=13232
 pulse analysis, detailed, circuit for fast device 2=5266
 pulse height distrib., cathode wavelength sensitivity, temp. var., IP21 3=19318
 pulse obs. with sampling oscilloscope 3=24340
 pulse recording, on mag. tape or with automatic voltmeter 2=13523

Photomultipliers—contd

pulse shaping, standardization, for optimum timing information 2=19863
 use as quadrant star-tracker sensor 4=21563
 for recoil nuclei wide beams study 2=20196
 refrigerator, liq. N 3=1863
 response profiles, comparison of two tubes 1=16387
 review 4=11698
 review, R.C.A. developments 1=2993
 review of recent types, parameters and uses 3=16976
 rise-time characteristics, use in counters 2=1485
 rise time meas., H disch. tube breakdown 4=18652
 for scintillation counters, characteristics 1=8401
 for scintillation counting 1=2995
 in scintillation counting 2=18006, 20020
 in scintillation counting, E.M.I. developments 1=3079
 in scintillation counting, light-gathering efficiency 1=4746
 sensitive to 1300A 2=20018
 sensitivity distribution over cathode and first focussing control voltage 4=19087
 for short-life plasma investigation 4=522
 side-window type of photocathode, linearity characteristics 4=5699
 single electron response pulses, amplitude distrib. 3=24339
 single-electron statistics 2=18011
 single electron spectra 4=14750
 single-electron statistics 3=17102
 spectral sensitivity, temp. effect 4=580
 stability improvement of FEU-35 model 3=2019
 stability of parameters rel. to counting rate 4=16524
 stability, rel. to operating conditions 4=16523
 stabilization, dynode system 2=17874
 statistical effects of transit times and secondary emission 2=15947
 statistics, multiplication times 4=19086
 subnanosecond, high-current 2=22253
 subnanosecond, with short accel.-decel. region 3=4180
 technique for spark study 1=10678-9
 temperature dependence 2=7789
 testing, simple light pulser 1=16388
 thermal noise reduction, use in liquid scintillation counter 3=2156
 time characteristics, multipliers with large cathodes 3=24338
 time-of-flight of electrons, measurement 4=14751
 time resolution characteristics meas. 4=577
 time response, limitations 3=9706
 time spread, measurement 4=16525
 transit time investigations 3=4181
 transit-time spread, cathode uniformity 1=2994
 tritium determination by d.c. meas. 1=19400
 Venetian blind-type, noise 4=29965
 X-ray spectroscopy, use 3=5802
 1100 to 2200A detector, construction 1=10733
 Cu—Be dynode, for ion counting 3=12264
 FEU-38, 51, with multialkali photocathodes, characteristics 4=8814
 K14FS 50, time characteristics rel. to operating voltage 4=8817
 Sb—Cs photocathodes, polarization selectivity 4=581
 SbCs, photocathodes, spectral response 1=16378
 Si dynode multiplier 1=18923
 VÉI-2, 4, with multialkali photocathodes, construction and performance 4=8812

Photons

See also Cosmic rays, photons; Gamma-rays; Nuclear reactions due to photons; X-rays.
 absorption in liq. hydrogen, 155-255 MeV 0=11149
 absorption by nuclei, oscillator model 0=15588
 absorption by neutron-proton pairs 2=18314
 angular distribution function, in cascade 1=19315
 angular distribution function, in cascade 3=4488
 atomic photoelectric effect for arbitrary photon polarization 0=2513
 avalanches, in lasers, from population inversion 4=14930
 bare-mass, incompatibility with gauge invariance 1=2012
 beams, fluctuations, rel. to photoelec. detector count distrib. 0=5124
 charge upper limit of 5×10^{-17} e, Mössbauer meas. 4=12598

Photons—contd

coalescence, in nuclear Coulomb field 3=24672
 coherence props. of blackbody radiation 1=226
 coherence, quantum theory 3=16725
 coherence theory, recent advances 4=298
 combination of two neutrinos, theoretical basis 4=11971
 Compton scatt. on protons, π^0 decay as intermediate state in 0=5582
 Compton scattering, in quantum electrodynamics tests, at short distances 1=423
 correlation experiments, linear and quadratic 3=21512
 correlation expts., coincidence counting technique appls. 3=21511
 correlation, polarization and resolving time effects 0=10745
 correlation theory 3=11876
 counter with control grid, development 1=9742
 counter, 100-300 A, design and performance 4=30205
 counters, non-linearity effects at high intensities 4=6004
 counting correlations in beams 4=29561
 cyclotron radiation from relativistic particles with arbitrary velocity distrib. 1=3157
 cyclotron radiation from relativistic particles, collision effects 0=15316
 decay into two photons in mag. field 0=2510
 density oscillation in a resonance medium 4=11840
 description by Regge trajectory in electron scatt. 3=5987
 detection, with Ge phototransistor, i.r. 0=8831
 detection, visible to i.r. theory 0=8830
 detector, scintillation, total absorpt., GeV region 3=10097
 detector, vacuum u.v. photoionization type 3=21537
 diffusion processes 3=22097
 displacement operators, rel. to integrals of motion 2=13724
 elastic scattering, by nuclear Coulomb field 0=20096
 elastic scattering, polarization effects 0=17278
 electric dipole moment, longitudinal, upper limit 2=5597
 in electromagnetic fields 4=21817
 electron interaction in terms of equation coupling 1=7194
 electron-pair creation, quantum field theory 0=7277
 electron-photon cascades, diffusion 0=7315
 electron-photon cascades, factorial moments, asymptotic behaviour 0=5545
 electron-photon cascades, initiation 0=9462
 electron-photon cascades, as stochastic problem 1=2038
 electron-photon gas, quantum field theory approach 1=5236
 electron-photon showers, in air and Al 0=20264
 electron-photon showers, in Pb, lateral and ang. distrib. 0=9472
 elementarity, possible tests 4=27823
 elementary nature, from γ -e scattering 3=24673
 as elementary particles, appl. of Ward-Takahashi eqns. 1=7202
 emission, elec. field induced from Ge 3=855
 emission from irradiated dielec. slab 4=26231
 emission, by fast particle interacting with elementary excitations 4=3367
 emission from nucleus, recoilless, following transition sequence 1=17395
 emission theory, rel. to extent of photon 2=21988
 energy meas. in Xe bubble chamber, 20-1000 MeV 4=19464
 extension of functional theory 0=5488
 extreme u.v., detection with photomultiplier 0=7144
 fluctuations in photon streams 0=5123
 forward scattering by bound electrons 0=9325
 Furry theorem 0=12825
 fusion with electrons, interaction energy 0=7314
 gas, theory 2=15470
 in glow discharges, rel. to electron emission 3=7632
 Green's function, contrib. of strong interactions 4=867
 Green's function, Redmond procedure 0=5529
 heavy photon, (f^0), possible existence 4=5922
 high-energy, charged-particle beam production, theory 0=20095
 high-energy physics, review lecture 3=14932
 infrared divergences 0=11089, 18953
 inner composition, and quantum number 3=14933
 instant of emission, photomultiplier determination 1=6948
 intense fields, first or second-order perturb. theory 4=22315

Photons—contd

interactions, current conservation and low energy limit 0=343
 interactions, $\gamma + d \rightarrow p + p + \pi^-$, at 1 BeV, cross-sections 0=17399
 interactions, $\gamma + p$, at 1.1 BeV, evidence against B^0 prod. 0=17363
 interactions, $\gamma + p$, at 1.1 BeV, multiple meson prod. 0=13039
 interactions, $\gamma + p \rightarrow \pi^0 + p$, 900-1200 MeV cross-sections 0=15415
 interactions, $\gamma + p \rightarrow \pi^0 + p$, at high energy, recoil proton polarization 0=17397
 interactions, π^+ production on H, 600-900 MeV forward diff. cross-sections 0=17398
 lead converters, efficiency for 50-500 MeV 0=1236
 light, neutrino theory, photon as "bound state" of two neutrinos 4=30202
 Lilienfeld radiation from metals by 2-12keV electrons 1=16427
 low-energy emission, in ep scattering 1=19175
 macroscopic causality in expanding universe 3=21085
 magnetic Compton spectrometer, theory 2=3304
 magnon interactions 0=13725
 mass determ. by Mössbauer effect, review 4=30502
 mass, rel. to electron bare mass. 4=30203
 mass, energy and momentum 4=9153
 mass, finite, 2-dim. model, not determined by gauge invariance 4=24969
 mass, and Schwinger's model 4=21735
 massive, rel. to gauge invariance 3=14855
 massive and massless, in gauge-invariant theory 4=21734
 as massless particle, rel. to space reflection 0=17274
 meas. of small sources, effect of ionization chamber size 0=17136
 model, composite e^+e^- model 2=3297
 momentum effect in magneto-optics of excitons 0=7997
 monochromatic (nearly), prod. by e^+ annihilation 2=18316
 monochromatic, by positron annihilation 2=3320
 monochromatic source, using positron annihilation 0=7320
 nature, as fundamental particle 2=20286
 as neutrino-antineutrino system, 4-component wave-function 0=3944
 neutrino theory (Jordan) 3=16724
 new space-time reflection theory 1=464
 noise, in photographs, and informational assessment 3=14389
 nonlinear electromagnetism, functional theory of particles 0=3914
 in nucleon pair production 2=20333, 22500
 optical transition radiation from protons entering metal surfaces 0=20099
 in optics, comparison of particle and wave concepts 1=1804
 packets, and Lennuier effect, theory 1=11825
 packets, theory and Lennuier effect 0=14780
 pair creation, demonstration of qu. mechanics in the large 1=3232
 pair production in crystals, angle of divergence 1=19760
 paradox of Einstein, Podolsky and Rosen 0=14517
 photodetachment cross-section for H^- 0=14960
 photodisintegration of deuterons 0=5622
 photoionization of hydrogen gas 1=1889
 photon-electron showers, direct production from μ -meson interactions 3=14998
 photon fluid model, relativistic cosmology 3=1505
 photon gas, mixed with material gas, relativistic dynamics 0=953
 photon propagation function in quantum electrodynamics 0=12822
 photon propagator, independence of physical charge in high-energy limit 0=20027
 photon propagator, structure theorem 0=323
 photoproduction of π -mesons on nuclei 1=12098
 π^0 -photoproduction on protons, experimental set-up 1=7264
 from positron annihilation, 15 MeV, linewidth 2=9828
 production, by charged particle scattering 1=2037
 production, by charged particle scattering 1=3152
 production in Compton effect 4=19462
 production, forward, by 9 GeV π -p interact. 4=16939
 production, He ion beam on W, 25-100 eV 3=21900
 production, ion beam on W, He, Ne ions, 25-100 eV 3=21900

Photons—contd

production, monochromatic, by positron annihilation 1=13372
 production in multiple particle prod., e.m. process 3=19593
 production in multiple particle prod., e.m. process 3=19594
 production, multiple, in quantum electrodyn., formalism 2=9811
 production, Ne ion beam on W, 25-100 eV 3=21900
 production of π^+ on D at 500-1000 MeV 0=15413
 production of π^0 -mesons on C at 160-200 MeV 0=13044
 production of π^0 -mesons on protons at 245 MeV 0=13045
 production, in p-p reactions at 23.1 GeV 2=22506
 production, from positron beams, annihilation radiation 2=3321
 production, by radiative electron capture by In in Si 2=2157
 production, unification with e prod. 4=28017
 propagator, canonical, asymptotic form deriv. 2=18057
 propulsion of space vehicles 0=12334
 quantum electrodynamics, scattering 3=12390
 radiation from charge moving in inhomogeneous medium 1=19163
 radiation field effects, rel. to galactic red shift 2=2605
 radiative corrections due to soft photons 1=10830
 radiative corrections to pair production at high energies 1=490
 resonance in deformed nuclei 0=5766
 Regge-pole character, possible exptl. tests 4=862
 as Regge poles 3=22050
 Reggized, scattering theory 3=19574
 from relativistic charged particle traversing diffuse boundary 1=19162
 relativistic quantum theory 3=4327
 rest mass, rel. to electrodyn. quantization 3=536
 ruby, excited luminescence 3=4991
 scattering, on deuterons, 50-120 MeV, corrections to impulse approx. 0=12891
 scattering, on deuterons, quasi-elastic 0=15315
 scattering, on electrons 0=7295
 scattering, on Hg atoms, polarization, calc. 0=17692
 scattering, in homog. mag. field 0=322
 scattering, by K-level electrons of Hg 0=15314
 scattering, on nucleons, dispersion relations 0=7319, 7296
 scattering, on nucleons, one-meson approxm. 0=11132
 scattering, on protons, dispersion relations 0=11130
 scattering, unification of equal-frequency photons in presence of matter 0=7316
 scintillator, plastic, response in 1-10 keV range 4=19465
 self-energy, gauge-invariant, Meissner effect analogy 4=866
 self-energy, in lowest order, study from quantum electrodynamics 3=24586
 self-mass, formal paradox in quantum electrodynamics 0=12820
 single beam meas., photoemissive or photoconductive cells, excess noise 0=14954
 "size", quantum electrodynamics at small distances 0=11077
 from slowly moving particle system, work done against radiation field 0=5530
 space-time reflections 1=5622
 spin density, in classical e.m. theory 0=3834
 spin inertia effect, waveguide detection, and gauge invariance 3=19599
 spin, inertial effect from critical reflection of polarized beam 4=3365
 spin inertia effects 4=16846
 spin, inertia effect 4=25052-3
 splitting into two, in nuclear Coulomb field 3=2231
 spontaneous emission from electrons 1=5624
 superlight-velocity optics 0=7326
 time-correlated, detection, by coincidence counter 0=12468
 Townsend discharge, absorption 3=4029
 in Townsend discharge, absorption 4=18712
 transport theory 1=18315
 trisection into 3 photons, gravitational field effects 2=22392
 u.v. radiation counters 0=3598
 velocity in finite degree of freedom theory 4=14999

Photons—contd

velocity meas., moving sources, secondary re-emission 3=18958
 velocity meas. in vacuo, energy depend. investigation 0=12467
 wave description 1=16664
 wave eqns. and observables, canonical form 4=16839
 weight, apparent, det. using Fe^{57} γ -ray resonant absorption 0=10570
 weight 2=7837
 from Ag foils, ang. and spectral distrib. 4=22552
 in Hg vapour glow discharge, contribution to electron emission 1=9531

interactions
 (subheading introduced in 1961)
 absorption, high energy in universe 10^{12} eV 2=22473
 "beat" generation near charged particles 3=7302
 boson pair production, cross-section 4=5958
 boson photoproduction, all possible expts., theory 2=3264
 Cherenkov radiation, no analogue for photons moving in rectilinear channel in medium 4=27632
 in cosmic ray extensive air showers 3=19719
 deuteron photodisintegration near threshold 3=19710
 on deuterons, π^-/π^+ ratio from threshold to 194 MeV 1=527
 doublet parity, and its conservation 2=11871
 e.m. cascades and polarization of medium 3=12432
 electron pair prod. on nuclei, calc. 3=17257
 electron-photon cascades, stochastic theory 1=18287
 electron triplet production, in H_2 at 323 MeV 2=5627
 with electrons and atoms 2=9767
 electrons, scattered by intense polarized beam, from laser, obs. possibility 3=12448
 with electrons, transfer of helicity 1=12073
 exchange contrib. to e-p scatt., $p + \bar{p} \rightarrow e^+ + e^-$, calc. 3=17247
 gravitons, first approx., by general relativity 3=5349
 with heavy vector mesons 3=24771
 high energy absorption in universe 10^{12} eV 1=16737
 hyperons, π -photoprod., dispersion rels. calc. 3=22196
 interactions, $\gamma + n \rightarrow \pi^- + p$, total cross-section near threshold from $\gamma + d$ 1=531
 interference between two sources, var. numbers 4=21265
 interference in visible, shortwave and radio regions, paradox, review 1=18557
 isobaric model, gauge invariance in Hamiltonian form 3=10073
 lepton production process, pseudoscalar term 4=30170
 meson prod., on baryons, asymptotic relation calc. 4=16922
 mesons, scalar, prod., unitary symmetry model 3=22155
 mutual interactions in vacuum 3=9573
 with neutral vector meson, Green's function diagonalization 1=16826
 with neutral vector meson, Green's function diagonalization 2=22544
 neutral vector meson, two-field coupling 4=822
 neutrons, pion prod., integral eqns. 3=4422
 non-linear, from masers, optical, review 3=17093
 nucleon-photon vertex parts, integral representation 3=14889
 nucleons, boson pair production cross-section calc. 4=19403
 nucleons, K prod., resonance model 2=22626
 nucleons, multiple pion production 2=5714
 nucleons, $\rightarrow N + 2\pi$, (π, π) resonance obs. 2=7892
 with nucleons, π production, fermion Regge poles 4=3445
 pair and triplet production, at 5-90 MeV 2=3322
 photon-gas processes, cross-section meas. 3=9509
 photon-photon absorption 2=3298
 photoprod. of pions in deuterons 1=5751
 photoprod. of strange particles and hyperons 1=16910-1
 photoproduction of high-energy particles and Regge-pole hypothesis 3=22088
 prod. of electron pairs 0=11150
 production of intermediate boson pairs, cross-section 4=5958
 production of intermediate vector bosons, calc. 3=10074
 production of π^0 in hydrogen at 200-300 MeV 3=10147
 production of π^0 -mesons in He 1=12097
 proton, Compton scatt., dispersion theory 2=22472
 protons, pair-production, cross-sections 2=20288

Photons—contd

interactions—contd

- protons, Σ^0 production, rel. to Σ^0 lifetime meas. 2=9928
 ruby, colour changes on laser irradi. 4=22628
 scattering of electrons, to 5 BeV, radiative corrections 1=9748
 strange particle photoproduction 3=22203
 transformation into neutrino pairs 2=3299
 transformation into neutrino pairs 3=2232
 transition strength functions, new resonances 3=15173
 triplet prod. in emulsion at 90 MeV, momentum and ang. distrib. of recoil electrons 1=16763
 two-photon, kinematical aspects, gauge and Lorentz matrix elements 1=19205
 two-pion bound state, possible photoproduction and detection 1=5757
 $d + \gamma$ (12–30 MeV), and mesonic effects? 3=12513
 $\gamma + \text{Fe}^{56} \rightarrow W^+ + \text{Fe}^{56}$ (W =vector boson) 4=5939
 $\gamma + \gamma$ or $\gamma + (A, Z)$ neutretto prod. in stars, small calc. cross-section 4=7952
 γ - $\pi\pi$ vertices, evidence from π prod. by electron annihilation 0=9418
 $\gamma + n \rightarrow \pi^- + p$ to $\gamma + p \rightarrow \pi^+ + n$ ratio and γ - π - p coupling 4=6005
 $d\gamma, \pi^-/\pi^+$ photoproduction ratio 4=6102
 η photoprod. on protons, resonance model 4=3473
 $y + d \rightarrow \pi^0 + d$, at 500 MeV, impulse approx. 2=5708
 $\gamma + d$, pion photoprod., dispersion relations study 3=7890
 $\gamma + d \rightarrow \pi^0 + d$, 500 MeV, rel. to model with 3D wave contrib. 4=9303
 $\gamma + d \rightarrow \pi^\pm + 2N$, rel. to π - π resonance 2=20385
 $\gamma + e^- \rightarrow e^- + \nu + \bar{\nu}$, neutrino emission from stars 1=8445
 γ - γ , as explanation of galactic light red-shift 2=22467
 $\gamma + \gamma \rightarrow \gamma + \nu + \bar{\nu}$, in stellar neutrino emission 3=24689
 $\gamma + \gamma \rightarrow \nu + \bar{\nu}$, forbiddenness for local coupling 1=5700
 $\gamma + \gamma \rightarrow \nu + \bar{\nu}$, at high stellar temps. 1=2636
 $\gamma + \gamma \rightarrow \gamma + \nu + \bar{\nu}$, at high stellar temps. 1=2636
 $\gamma + \gamma \rightarrow \nu + \bar{\nu} + \gamma$, reaction rate, method of calc. 1=5700
 γ -H, 167–212 MeV, rel. to π^+ prod. 2=5713
 γ -H, 167 to 212 MeV, rel. to π^+ prodn. 3=4428
 $\gamma + \text{He}^4 \rightarrow \pi^0 + \text{He}^4$ 2=5615
 $\gamma + \text{He}^4 \rightarrow \pi^+ + T + n$, no evidence for H^4 state with $T = 2$ 4=12079
 $\gamma + \Lambda \rightarrow \Lambda + \pi$, cross-sections 2=22563
 γ -N, possible cross-section maximum 2=20419
 $\gamma + N \rightarrow \gamma + \pi + N$, dispersion relations 2=262
 $\gamma + n \rightarrow K^+ + \Sigma^-$ 1=10925
 $\gamma + N \rightarrow Y + K$, resonance model 3=24797
 $\gamma + N \rightarrow N + \pi + \pi$, at 450–700 MeV, resonance model 1=19247
 $\gamma + N \rightarrow \pi + N$, at high energies, helicity formalism 4=19547
 $\gamma + n \rightarrow \pi^+ + n$, 185 MeV, π^+ ang. distrib. 2=7882
 $\gamma + n \rightarrow \pi^- + p$, data from $\gamma + d$, from threshold to 184 MeV 1=527
 $\gamma + N \rightarrow 2\pi + N$, isospin analysis 1=9757
 γ -N, pion prod., π - π interact. effects 3=15016
 $\gamma + n \rightarrow p + \pi^-$, proton polarization 3=10115
 $\gamma + p$, high energy, μ , e prod. and comparison 3=22157
 $\gamma + p$, pion photoprod., dispersion relations study 3=7890
 $\gamma + p$, K^+ meson prod. 2=22625
 $\gamma + p \rightarrow K^+ + \Sigma^0$, even $K\Sigma$ parity deductions 1=13498
 $\gamma + p \rightarrow \eta + p$, 978 MeV, $\eta \rightarrow 2\gamma$ branching ratio 3=22187
 $\gamma + p \rightarrow n + \pi^+$, energies up to $(\frac{1}{2}, \frac{3}{2})$ resonance threshold 3=2294
 $\gamma + p \rightarrow n + \nu + e^+$ in stars 3=23693
 $\gamma + p \rightarrow n + \pi^+$, $\rightarrow p + \pi^0$, contrib. of Born terms 1=13470
 $\gamma + p \rightarrow p + \pi^+ + \pi^-$, rel. to γ - 3π vertex 3=7894
 $\gamma + p \rightarrow p + \pi^- + \pi^+$, 300–800 MeV, rel. to interaction current 3=6035
 $\gamma + p \rightarrow \pi^0 + p$, 550 to 1050 MeV 4=6095
 $\gamma + p \rightarrow \pi^+ + n$, at const. momentum transfer 4=21892
 $\gamma + p \rightarrow \pi^+ + n$, 165–212 MeV 3=6033
 $\gamma + p \rightarrow \pi^+ + n$, 200–260 MeV, fixed momentum transfer 3=22166
 $\gamma + p \rightarrow \pi^+ + n$, 200–450 MeV 3=22164-5
 $\gamma + p \rightarrow \pi^+, \pi^0 + n, p$, surface of cross-section against photon energy and π angle, contours 3=22167
 $\gamma + p \rightarrow \pi^+ + \pi^- + p$, π - π resonance 2=5709
 $\gamma + p \rightarrow \pi^+ + p$, 600–800 MeV 2=22558
 $\gamma + p \rightarrow p + \omega$, search for 1=7268
 $\gamma + p \rightarrow p + \pi^0$, in H, 600–800 MeV 2=22557

Photons—contd

interactions—contd

- $\gamma + p \rightarrow p + 2\pi^0$, effect of $(\gamma, 3\pi)$ vertex 3=7895
 $\gamma + p \rightarrow p + \pi^0$ or $n + \pi^+$, ≤ 4 BeV, reson. effects 4=25161
 $\gamma + p \rightarrow p + \pi^0$, 910 MeV 2=22520
 $\gamma + p \rightarrow p + \text{low-mass anomaly}$ 3=10151
 $\gamma + p \rightarrow p + \pi^0$, recoil p polariz. meas. 2=11976, 13799
 $\gamma + p \rightarrow p + \eta^0$ reaction, search for 3=7914
 $\gamma + p \rightarrow p + \pi^0$, recoil proton polarization 1=8483
 $\gamma + p \rightarrow p + \pi^0$, 740–1140 MeV 2=20389
 $\gamma + p \rightarrow \pi^0 + p$, for polarized γ , π - π interaction effects, calc. 1=8485
 $\gamma + p \rightarrow \pi^0 + p$, at 260–400 MeV, recoil proton transverse polarization, calc. 1=3207
 $\gamma + p \rightarrow \pi^0 + p$, up to 800 MeV 1=16779
 $\gamma + p \rightarrow \pi^- + \pi^+ + p$, cross-sections and ang. distrib. at forward angles 1=2093
 $\gamma + p \rightarrow \pi^+ + n$, 600–800 MeV 1=16779
 $\gamma + p \rightarrow p + \pi^+ + \pi^-$ at 1.2 BeV 1=13471
 $\gamma + p \rightarrow p + \pi^0 + \pi^0$ and $\rightarrow n + \pi^+ + \pi^0$, at ~ 1 BeV, ang. distrib. 1=2092
 $\gamma + p \rightarrow p + \text{meson}$, rel. to Lee and Yang theory 1=16823
 $\gamma + p \rightarrow p + \pi^+ + \pi^-$, 2-body mass spectra 4=25088
 $\gamma + p \rightarrow \Lambda^0 + K^+$, K^+ "particle" exchange approx. 3=15041
 $\gamma + p$, π^+ prod., no need for $\gamma\pi\rho$ 4=16930
 γ - π - p coupling from $\gamma + n \rightarrow \pi^- + p$ to $\gamma + p \rightarrow \pi^+ + n$ ratio 4=6005
 γ - 3π interaction and ω , ρ meson decay rates 3=6077
 $\gamma\pi\rho$ coupling const., from double photoprod. expt., theory 3=10072
 μ pair prod. in carbon, by 1000 MeV bremsstrahlung of electrons 3=7879
 μ photodissociation, charged vector boson prod., calc. 1=8470
 μ prod., very high energy beams, by bremsstrahlung 4=16924
 π pairs, electromag. production, theory 2=1707
 π photoprod. on hydrogen, 550–900 MeV 3=19669
 on π , photoprod. of π , strip approx. 4=3439
 π photoproduction by polarized photons, π ang. distrib. and polarization, calc. 1=7266
 π^+ photoproduction on H and D at 340 MeV, relative yields 1=8484
 π prod., by $\gamma + N$, matrix element meas. 4=6096
 π prod. on D at 240 MeV 1=3208
 π prod., high energy, 0° mechanism 4=27873
 π prod. on p at high energy, contrib. of Born terms 1=13470
 π^0 prod., and life meas. poss., for small forward angles 4=15086
 π prod. from p, Be, off-shell corr. 4=30249
 π prod. by polarized photons on polarized protons, cross-sections, calc. 1=526
 π^+ photoproduction on H at 500–820 MeV at backward angles 1=7267
 π^0 photoproduction on protons, rel. to $(\gamma, 3\pi)$ interaction 1=12099
 π^+ photoprod. on He^4 3=4425
 π^+ photoprod. from hydrogen, 187 MeV 3=7889
 π^+ , photoprod., 152–162 MeV 3=2299
 π production on C at 205–335 MeV, yields and π^-/π^+ ratio 1=8482
 π production, on nucleons, Mandelstam representation 2=1706
 π production on nucleons, theory 2=3377
 π^0 production, low-energy, evidence for retardation term 2=13846
 π^0 production, π - π interaction 2=3376
 π^0 production, search for spin-1 intermediate meson 2=3380
 π^+ production, on H, near threshold 2=3378
 π^+ production, on H, using polyethylene target 2=304
 π^+ production from p, at 160–200 MeV 3=4423
 d, π^0 prod., low angles, 190–220 MeV 3=24766
 p, π^0 prod., low angles, 190–220 MeV 3=24766
 $p\gamma, \pi^+$ prod. of 33.8 MeV, abs. cross-section 4=6101
 $p + \gamma \rightarrow K^+ + \Lambda$, exchange contrib. isolation 4=21931
 $p + \gamma \rightarrow K^+ + \Sigma^0$, low-energy 3=17334
 $p + \gamma \rightarrow \eta^0 + \pi^+$, 2–3 BeV and η^0 lifetime meas. 4=25164
 Ar, ionization, from M, to L edges 4=14575
 BeV electron scattering, cross-sections 1=13394
 D, π^-/π^+ threshold ratio 3=2294
 9 GeV, in emulsion, Σ^\pm prod. and decay 1=19282

Photons—contd

interactions—contd

- 27 GeV jets, formula for primary energy 1=12089
 H^3 disintegration, up to 9 MeV 4=15109
 He, disintegration meas. 3=6095
 $He^3(\gamma, p)D^2$, $He^3(\gamma, n)2p$, γ energy var. 4=27915
 $He^3 + \gamma \rightarrow p + d$, 8.5-22 MeV, 90° differential cross-sections 3=19716
 $He^3(\gamma, p)d$, 10-30 MeV, peaks 4=15113
 $He^3(\gamma, p)d^2$, $He^3(\gamma, n)2p$, up to 170 MeV 3=19715
 He^4 , pion photoproduction, ang. correl. 4=3443
 He^4 , π^+ photoprod. 3=4425
 $He^4(\gamma, np)D^3$ 3=6093
 $He^4(\gamma, p)H^3$, angular distribution for 23-32 MeV γ 3=6092
 K photoproduction, analysis in Mandelstam representation 1=12112
 N, K-photoprod., dispersion rels. calc. 3=22196
 on N, photoprod. of π , strip approx. 4=3438
 N, photoprod. of pion pairs 4=3440
 Si^{28} , excitation of electric dipole states, calc. 4=17045
 < 1150 MeV, photodissociation of complex nuclei 2=428

polarization

(subheading introduced in 1961)

- atomic photoeffect, K-shell, polarization correl. 4=17255
 bremsstrahlung, of electrons on protons 1=19169
 calculation, by equiv. photon method 3=2237
 circular, analyser using rapidly alternating mag. field 4=9165
 circular, bremsstrahlung, in mag. Fe target 4=15040
 circularly polarized beam, critical reflection rel. to spin inertial effect 4=3365
 in (d, $p\gamma$) stripping reactions, det. by distorted wave method 2=479, 22848
 γ -rays, plane, meas. method 4=17082
 linear, meas. by pair production, theory 2=9813
 linear polarization of gamma-rays, meas. 1=13799
 meas. methods 1=8447
 measurement, electron pair prod. asymmetry in crystals, multi GeV 3=17234
 polarized beams, prod. and nuclear reactions 2=12179
 positronium annihilation, demonstration of qu. mechanics in the large 1=3232
 radiation from fast electrons with oriented spins in mag. field 4=11967
 in Σ^0 hyperon decay, pair prod. anal. 2=12012
 spurion postulate rejected 2=7819
 vacuum, effects 1=8439
 μ^- -mesons nuclear radiative capture 3=17488
 Eu^{152m} decay, circular 3=15085
 6 GeV beams, in crystal (001) plane 3=572
 from He excitation by p and H 4=22316
 6 MeV, rel. to electron-pair prodn. 4=9183
 by Pb scatt. ~ 1 MeV, reconciliation with theory 4=22105
 $Si^{30}(p, \gamma)P^{31}$, 1514 to 3435 keV 4=12224
 Y^{90} , β decay, first forbidden, internal bremsstrahlung, circular, calc. 3=22332

scattering

(subheading introduced in 1961)

- by atoms and nuclei in crystals 1=17395
 coherent scatt. on nuclei at 1.17 and 1.33 MeV, Z depend. 1=8694
 Compton γ -p scattering, near π^+ and π^0 threshold 2=22565
 Compton scatt., virtual, on N, amplitude 4=21818
 Compton scattering, Klein-Nishina formula 1=7210
 Compton β - γ coincidences, angular correlation 1=16728
 Compton effect, polarization phenomena 1=16731
 Compton γ -p scattering near π^+ and π^0 threshold 1=16853
 Compton, several photons, intensity effects 4=19461
 Coulomb field (Delbrück), small angle, pair prod. calc. 4=3370
 d-photodisintegration, cross-sections and polarization 4=19603
 Delbrück, amplitude calcs. 4=30204
 Delbrück scatt., small-angle, low-energy theory 4=11884
 Delbrück scattering by nucleus, angular distrib. 4=30147
 double Compton effect, numerical study 2=9812
 double Compton scattering, γ -e correl., prod. of 2 circ. polarized γ 1=476
 electric multipole, rel. to nucleon electric polarizability 1=13405
 electrons, free, in intense laser beam, theory 4=9169

Photons—contd

scattering—contd

- with electron pair production, ang. and energy distrib. 4=17114
 by electrons, relativistic, high energy photon prodn. 3=14934
 by electrons, scatt. amplitude, nonlinear effects 3=10075
 γ -e, non-linearity intensity 3=19600
 γ - γ , high energy, theory 2=22469
 γ - γ scattering, high energy, theory 1=16733
 γ -N, amplitude, and crossing symmetry 1=16734
 γ -p, elastic, η -meson and scalar boson contrib. 3=17233
 γ -p, rel. to f_0 meson resonance 4=15060
 γ -quanta on oriented nonspherical nuclei 3=4620
 heavy nuclei, bremsstrahlung scatt., rel. to giant resonance 4=22104
 gas molecules, classification and review 3=7245
 graviton creation in mag. field and Coulomb scatt. 3=5349
 in imperfect crystals, diffusion effects, energy broadening 2=595
 in imperfect crystals, diffusion effects, energy broadening 3=4859
 inelastic, by Coulomb field, with electron pair prod. 4=16847
 inelastic-high energy, in Coulomb field of nucleus, pair production 1=5887
 interference between resonant and Rayleigh scattering 2=22783
 by K-shell electrons, in Au and Sn 2=20756
 laser photon beams on γ -quanta, high-energy 4=9154
 meson- γ , matrix elements, l. r. singularities 4=5925
 mutual interactions in vacuum 3=9573
 nuclear Coulomb field, at high frequ., theory 3=22363
 (n, γ) reaction γ -rays, varying energy for photonuclear resonant scatt. 4=21821
 N- γ , Compton scatt., dispersion relns. 4=6000
 by nuclei, deformed, cross-section relations, sum rule 1=8692
 on nuclei, elastic, dispersion formula 2=3548
 nucleon Compton, high-energy, using Regge hypothesis 4=19463
 on nucleons, amplitude and crossing symmetry 2=22470
 by nucleons, Compton, dispersion relations 1=16729
 on nucleons, Compton, fixed-angle dispersion relns. 2=11917
 nucleons, Compton scatt., dispersion relns. rel. to expt. 4=6001
 nucleons, partial wave dispersion relns. 2=16180
 on nucleus, Coulomb field, inelastic 2=7840
 on nucleus, dispersion relations 2=20584, 20586
 on oriented nonspherical nuclei 2=5885
 p- γ , for polarized protons and photons, phenomenological analysis 4=11960
 photon-photon, by double dispersion relns. 4=19372
 photon-photon, at high energies, asymptotic expression 4=6007
 photon-photon, neutral pion contribution 1=13374
 photon-photon, resonance scatt., cross-section, calc. 1=19165
 photon-proton elastic scattering above 300 MeV, analysis 1=16730
 on photons, invariant functions, factorization 4=831
 by photons, possible laser ~ 40 GeV γ obs. 4=2856
 proton Compton effect, two-pion exchange 2=1673
 on protons, elastic, expt. and calc. 2=1671
 on protons, elastic, above 300 MeV 2=13756
 on protons, 50-300 MeV, model 2=7855
 resonance induced scatt. near Cherenkov cone 4=11959
 resonance-line photons 4=29371
 S-matrix theory with gauge invariance 4=15031
 by spin- $\frac{1}{2}$ particle, elastic, ang. and energy depend. 3=571
 on spin $\frac{1}{2}$ particles, Regge poles 4=3368
 on spin $\frac{1}{2}$ system, low-energy cross-section 1=16732
 Thomson, high intensity non-linearity 3=19600
 rel. to transport theory 1=18315
 on zero-spin particle, quadratic terms in scatt. amplitude 4=25054
 from Al at 25 MeV, elastic, near particle threshold 1=17070
 As, near particle threshold energy, elastic 3=12653
 B^{11} , resonant scatt. by 2.14 MeV state 3=15171
 Bi, near particle threshold energy, elastic 3=12653

Photons—contd**scattering—contd**

- from Bi at 25 MeV, elastic, near particle threshold 1=17070
- C¹², excitation of 15.1 MeV level 3=24919
- from Ca at 25 MeV, elastic, near particle threshold 1=17070
- from Cd at 25 MeV, elastic, near particle threshold 1=17070
- Cd, near particle threshold energy, elastic 3=12653
- Co⁶⁰ photons, Compton scatt., ang. distrib. 3=22099
- from Cu at 25 MeV, elastic, near particle threshold 1=17070
- Fe, near particle threshold energy, elastic 3=12653
- H, atomic, coherent, calc. 3=4715
- Hg¹⁹⁸, 412 keV, nuclear reson. fluoresc. 3=19796
- on Ho¹⁶⁵, 11-19 MeV bremsstrahlung 3=10322
- from K at 25 MeV, elastic, near particle threshold 1=17070
- KCl, zone-refined 2=8423
- Li⁷, evidence for H⁺ and Li⁺ 4=1005
- Mg, near particle threshold energy, elastic 3=12653
- by Mg, resonant scatt. of 12.5 MeV γ -rays 1=2203
- Ne atoms, from laser, double interaction with both laser modes 4=25541
- from Ni at 25 MeV, elastic, near particle threshold 1=17070
- in Pb, elastic, at 9 MeV, diff. cross-section 2=20585
- from Pb at 25 MeV, elastic, near particle threshold 1=17070
- from S at 25 MeV, elastic, near particle threshold 1=17070
- Sb, near particle threshold energy, elastic 3=12653
- from Si at 25 MeV, elastic, near particle threshold 1=17070
- from Sn at 25 MeV, elastic, near particle threshold 1=17070
- Sn¹¹⁶, resonance, 1290 keV 3=2429
- in U, elastic, at 9 MeV, diff. cross-section 2=20585
- Zn, near particle threshold energy, elastic 3=12653

Photophoresis

- boundary motion differences 4=18375
- measurement, var. with particle radius, gas pressure 4=11320

Photovoltaic effects

- alkali antimonide, high blue-sensitivity 4=573
- anthracene, in modulated light, temp. depend. 1=2423
- Becquerel effect in binary compounds 0=9985

Photovoltaic effects—contd

Cd_xSe_{1-x}, vert. illum., spectrum, var. with x 3=23015
 CdTe evap. films, high voltage 3=2973
 CdTe films, high-voltage 4=1682
 CdTe films, at high voltages 0=2312
 CdTe films, photo-e. m. f., rel. to structure 2=21188, 23459
 CdTe monocrystalline films, photo-e. m. f. rel. to phase composition 4=10126
 CdTe, photo-e. m. f. of thin layers 1=6178
 CdTe solar cells 2=8444, 14587
 CdTe-HgTe 1=3708
 Cs₃Sb films 1=14512
 Cs₃Sb layers, photo-e. m. f. effect 4=30656
 Cs₃Sb photocathodes 2=13585
 α -Cu phthalocyanine, surface photovoltage meas. 4=28422
 Cu-CdS cells, photoemission 0=9990
 Cu-CdS photocells 2=10542
 Cu in CdS, photojunctions, analysis 1=10059
 Cu-CuO contacts 4=7010
 Cu₂O, influence of heat treatment 0=13633
 Cu₂O, variation with temp. 2=23461
 Cu₂O, variation with temp. 3=6630
 GaAs, exciton polarization 0=13629
 GaAs films, obliquely evap., illum. var., O effect 4=17530
 GaAs, junctions, solar conversion 0=16969
 GaAs, photo-Hall effect in high-resistivity crystals, temp. depend. 3=6632-3
 GaAs, p-n junction, nonlinear 3=20421
 GaAs, p-n junction photocell 3=17914
 GaAs solar cells, effects of electron and proton irradiation 4=17538
 GaAs, surface, and barrier height, ambient sensitivity 4=1602
 Ga(As_{1-x}P_x), response of surface barriers 4=9901
 GaP, p-n junction, spectral sensitivity 1=17775
 GaP, p-n junctions 0=13708
 GaP, Zn-doped, p-n junction 2=21199
 Ge, appl. to study of surface homogeneity 2=12510
 Ge, bulk effect meas., applications 2=23464
 Ge, carrier concentration gradient 1=1042
 Ge, e. m. f. in impurity excitation region 2=18742
 Ge electrodes, photosensitivity rel. to quantum energy, erratum 4=22798
 Ge, external elec. field effect 0=15924
 Ge film obliquely deposited in vac., spectral sensitivity 4=26149
 Ge-(KBr-methylformamide solution) interface 3=10781
 Ge-mica capacitors, effect of elec. field 1=12439
 Ge, n-type, even photomagnetolectric effect 1=5030
 Ge p-n junction, effect of mag. field 1=7672
 Ge, p-n junction, transient photo-e. m. f. 2=18743
 Ge, p-n-p structures, sign reversal 4=10119
 Ge, photomagnetic effect, universal time constant 1=12460
 Ge, polycryst. layers, photo-e. m. f. 4=30662
 Ge: Cu, optical charge exchange, e. m. f. kinetics and spectrum 4=1683
 Ge, wavelength depend., effect of adsorbents 1=3789
 H₂O, photo-decomposition using anthracene crystal 1=1488
 InSb, detectors, detectivity and preamplifier details 0=14883
 InSb, In and Cd alloyed p-n junction, photovoltaic cell 0=11726
 InSb, 1-7 μ photoelectromagnetic effect 0=19499
 InSb p-n junctions 3=879
 InSb, p-n junctions, i. r. sensitivities 0=18069
 KCl, photoelec. Hall effect in additively coloured crystals, 4-114°K 1=5028
 Nb oxide films 0=9998
 PbS, film, current-induced photo-e. m. f. 3=17961
 PbS, films, with electron bombard. 0=15897
 PbS layers 3=25417
 PbS, layers, electron microscope study 0=18070
 PbS layers, e. m. f. and structure 3=3356
 PbS photosensitive surface, photo-e. m. f. 1=7673
 PbS, sensitized surfaces, majority carrier model 2=6499
 PbS, surface potential, changes on illumination 3=20414
 PbSe, p-n junction 2=8446
 S, electrets, polarization in darkness, initial elec. field effects 3=25411
 Sb chalcogenides 1=6178
 Sb₂S₃ films, h. v. photo-e. m. f., 90°-350°K 4=26141

Photovoltaic effects—contd

Sb₂S₃-Bi₂S₃, 20-30 V/cm e. m. f.'s 3=15629
 Sb₂S₃-Sb₂Se₃, 20-30 V/cm e. m. f.'s 3=15629
 Sb₂S₃, 20-30 V/cm e. m. f.'s 3=15629
 Sb₂Se₃, 50-80 V/cm e. m. f.'s 3=15629
 2Sb₂S₃-Bi₂S₃, 20-30 V/cm e. m. f.'s 3=15629
 Se barrier-layer cell, temp. rise 2=6504
 Se, barrier-layer cells, 16 types, slow response 0=2909
 Se, barrier-layer cells, X-ray response 1=14516
 Se, rel. to electron voltaic effects 2=638
 Se, photocell, e. m. f. in open circuit at low temps. 0=13637
 Se photocell, sensitivity variation with magnetic field, as function of temperature 1=8966
 Se photocells, for low-intensity illumination 2=10545
 Si cells, changes prod. by particle irradiation 3=912
 Si, e. m. f. in impurity excitation region 2=18742
 Si, rel. to electron voltaic effects 2=638
 Si films giving high voltages 4=22802
 Si films, high photovoltages 4=22803
 Si, at liq. N₂ temp. 1=6181
 Si-mica capacitors, effect of elec. field 1=12439
 Si, n-type, ext. elec. field effects 0=594
 Si, p-n effect, amplification and quenching 4=26151
 Si p-n junction, thermally oxidized, γ -irrad. effects 3=4930
 Si, p-n-p structures, sign reversal 4=10119
 Si photodiode, current-induced impurity photo e. m. f. 4=1693
 Si, P-doped solar batteries 1=7663
 Si, as radiation tracking transducer 2=22011
 Si solar cells, forward characteristics, efficiency 2=9522
 Si solar cells, 4.6-4.8 MeV proton effects 4=17535
 Si solar cells, effects of electron and proton irradiation 4=17538
 Si solar cells, impurity effect on radiation damage 4=28649
 Si solar cells, radiation resistance of p-type cells 2=4077
 Si solar cells, X- and γ -irradiated 1=1095
 Si, spectral depend. 4=6987
 Si, surface meas., rel. to minority carrier lifetime 1=19860
 SiC films, high photovoltages 4=22803
 SiC, p-n junction photo-e. m. f. 2=4069
 SiC, p-n photoeffect 3=13136
 SiC, p-n-p structures, sign reversal 4=10119
 α -SiC, photoelec. props of alloyed p-n junctions 0=20939
 SiC, semicond., p-i-n junction and V-I characts., p-n luminescence 3=13082
 SiO₂ p-i-p junctions 3=10849
 Sn, hole photoemission into GaAs 2=16723
 Ta₂O₅, p-i-p junctions 3=10849
 ThBr, effect of green pinacryptol 1=15201
 Ti oxide films 0=9998
 Ti oxide films, p-n junction photovoltaic effect 4=4237
 TiO₂(rutile), chemisorbed O₂ effect 4=22800
 TiO₂(rutile), u. v. 4=22801
 ZnCdS, positive hole motion 1=12464
 ZnO, rel. to adsorbed gases 2=16853
 ZnS, anomalous, theory 2=4072
 ZnS, anomalous rel. to polar props. 4=22807
 ZnS, effect of polarized light on photocurrents and photovoltages 0=2907
 ZnS, photovoltage model 3=25421
 ZnS:Cu, photoelec. polariz., effect of i. r. 2=23477
 ZnSe 3=11011
 Zr electrodes coated with Ag, Au or Sn 3=15636

Physical chemistry

(Heading introduced in 1961)

in aerodynamics and space flight, conference 2=2442

 Rochelle salt, piezoelec. polarization and domain structure 0=13664
 rubber, on vulcanization 3=25409
 scatt. of conduction electrons, i.r. absorption, calc. 1=14606
 salicylidene aniline crystals 4=22781
 second harmonic generation of laser line 2=22012
 semiconductor rectifying contact, piezoelec. effect 1=1052
 semiconductor strain gauges and transducers 4=7058
 semiconductors, current saturation, nonlinear theory 4=28542
 semiconductors, piezoelectric, absorption of sound 3=17653
 semiconductors, piezoelectric, acoustoelectric effects 4=4133
 semiconductors, piezoresistance meas. 2=19827
 semiconductors, rel. to u.s. propag., theory 4=12626
 semiconductors, stress dependence of piezoresistance 1=17787
 semiconductors, rel. to supercond. transform. 2=11552, 13502
 semiconductors, u.s. amplification by d.c. field 2=18784
 semiconductors, use in u.s. amplifiers 4=22488
 semiconductors, ultrasonic amplification conditions, review 4=3988
 semiconductors, V-I char., drift velo. carrier current saturation 4=26020
 sinusoidal pressure generator 0=3586
 solid state devices, review 2=16586
 sorption detector, piezoelectric 4=29197
 sound absorption, theory 2=23055
 spherical shell, polarized, radial deformation 2=19876
 stress analysis for hollow rotating quartz cylinder 4=21068
 stresses and elec. field in rotating disk 2=16795

Piezoelectricity—contd

- symmetry changes during direct and inverse responses 3=20390
 synthetic materials, review 0=7988
 technique using transient high-stress conditions 2=1374
 terpene monohydrate crystals, properties 0=13952
 tetragonal crystals, Raman spectra 2=21254
 tetragonal crystals, Raman spectra 3=3025
 thiourea 0=2921
 titanate system, mixed, props., temp. and press. depend. 0=1714
 tourmaline, Z-cut, sensitivity and reproducibility to 7 kbar 4=22782
 transducer, depletion layer, analysis 4=24316
 transducer, electromech. coupling coeff. meas. 3=5494
 transducers, spherical, prestressed electrodes 3=5504
 transducer, transient performance 1=8201
 transfer coefficients, ultrasonic emitters 2=2818
 tranverse contraction coeff., meas. method 4=7055
 triglycine sulphate 2=679, 4104, 6531
 triglycine sulphate, effect of d.c. field on elastic constant 2=14623
 triglycine sulphate, effect of γ -radiation 3=17949
 triglycine sulphate, electrostrictive constants 3=15624
 triglycine sulphate, rel. to ferroelec. props. 2=23508
 triglycine sulphate, inverse effect, a.c. field and temp. depend. 3=28391
 triglycine sulphate, 10°-80°C meas. 4=7051
 various (49) substances, crystallization and props. 0=641
 and velocity, acoustic waves, u. s. 4=6738
 vibrating body reson., and elastic consts. meas. 4=15683
 wood, piezoelec. texture 1=17858
 woods 4=22783
 zincblende structure, lattice theory with electron polariz. 2=12575
 (Ba, Pb)TiO₃, composition depend. 1=20504
 (Ba, Pb)(Ti, Sn)O₃, props. 0=21236
 Ba, Sr and Pb metaniobates in Na niobate 0=630
 (Ba, Sr)TiO₃, piezoresistance negative peak near Curie temp. 1=10085
 BaTiO₃ 2=16790
 BaTiO₃, asymmetric hysteresis loops 2=16798
 BaTiO₃, contrib. to permittivity 2=14625
 BaTiO₃, rel. to Cr₂O₃ doping 2=16791
 BaTiO₃, cut at 45° to polarization dim. 2=4107
 BaTiO₃, rel. to depolarization charge 0=10019
 BaTiO₃, doped with Cr, Bi oxides 2=16792
 BaTiO₃, effect of flexural stresses on piezoelec. props. 1=12480
 BaTiO₃, effect of pressure 0=11748
 BaTiO₃, microprobe, u.s. fields study 3=1777
 BaTiO₃, modified, press. of 0-10 000 psi effect rel. to acoustic projectors 4=26117
 BaTiO₃, moduli, effect of elec. field 2=672
 BaTiO₃, piezoelectric modulus, determ. by ball drop method 4=7056
 BaTiO₃, polycrystalline, at high press. 2=4106
 BaTiO₃, polycrystalline pressure hysteresis 2=14628
 BaTiO₃, polycrystals 1=2433
 BaTiO₃, polycrystals 1=6197
 BaTiO₃, use to drive Se rectifier 1=1092
 BaTiO₃-BaHfO₃, 60-700 μ thick, d₃₃, modulus 3=17939
 BeO, correl. to internal crystal structure 4=10525
 BeO crystals, polar character 3=10884
 Cd pyroniobate, rel. to temp. and elasticity 4=4459
 CdS 0=16027
 CdS, current saturation, hypersonic wave generation 2=23377
 CdS, electron-phonon interactions and cyclotron resonance 4=20258
 CdS, meas. and model 3=8556
 CdS piezoelectric scattering rel. to phonon drag 1=17857
 CdS, plate crystals, investigation of mech. props. 0=1715
 CdS, u.s., free carrier trapping effect 4=21236
 CdS, values of d₃₃ and d₃₁ 1=10084
 CdS:Cu, ultrasonic transducer with diffused layer 3=9566
 CdSb, anisotropic, temp. var. 4=17524
 CdSe, rel. to layer structure 1=7867
 CdSe, meas. and model 3=8556
 CdTe, meas. and model 3=8556
 GaAs, and effective ion charge 4=1670
 GaAs, piezoresistance coeffs. 2=23394

Piezoelectricity—contd

- Ga_{2-x}Fe_xO₃, ferromag. resonance of piezoelectric form 1=6395
 Ga_{2-x}Fe_xO₃, simultaneous with ferromagnetism 0=11825
 GaSb, piezoresistance, pressure depend., n-type 0=9977
 Ge, impurity cond. 3=13058
 Ge, piezoresistance, pressure depend. p-type 0=9977
 Ge, piezoresistance, review 3=2965
 Ge, Sb-doped, low temps. 2=12513
 Ge:Sb, piezoresistance, 4-7°K 0=20903
 InSb, piezoresistance, pressure depend., intrinsic and p-type 0=9977
 KD₂PO₄, constant 3=17943
 KNbO₃, 3=16033
 LiH₃(SeO₃)₂, piezoelectric constants 3=10881
 Mg₃B₇O₁₃Cl, around phase transform., and anti-ferroelec. 4=4201
 MgSO₄·7H₂O crystals, temp. depend. 0=11749
 NH₄H₂PO₄, rel. to temp. 2=18766
 NaCl, elec. potential due to plastic deformation 3=900
 NaNO₂ constants measured by resonance 4=28630
 NaNO₂ single crystals 3=23002
 NaNO₂ single crystals, -50° to +230°C 3=10885
 Pb titanate zirconate ceramics, 4.77°K 2=8474
 Pb titanate zirconate ceramics, for transducers 2=17548
 Pb zirconate titanate ceramic ferroelectric resonators, piezoelectric coupling 4=28629
 Pb-Ba metaniobate solid solns., various ions added 2=14635
 Pb-Ba and Pb-Sr zirconate-titanate, finite strain response 4=7054
 Pb₂FeNbO₆ 2=18769
 Pb₂FeTaO₆ 2=18769
 PbNb₂O₆-BaNb₂O₆-SrNb₂O₆ 0=6154
 PbO-Nb₂O₅-Nd₂O₃ system 2=14634
 PbO-TiO₂-ZrO₂ system 3=3255
 PbTe and PbSe, 78-293°K 2=18783, 21225
 PbTiO₃ ceramics, props. and transducers 1=17854
 PbZrO₃ ceramics, props. and transducers 1=17854
 Pb(ZrTi)O₃, modified, press. of 0-10 000 psi effect rel. to acoustic projectors 4=26117
 Pb(Zr-Ti)O₃, piezoelectric ceramic, props. modified by A¹B⁵⁺O₃ or A³B³⁺O₃ 4=12974
 Pb(Zr,Ti)O₃, piezoelec. generation of elec. pulse 1=16250
 SbSI, in ferroelec. range 4=12973
 Se, polycrystalline samples, temp. meas. 0=5095
 Si, n-type, heavily doped, resist. meas. 4=12912
 Si, piezoresistive pressure transducers 3=887
 Si, piezoresistance, rel. to pressure to 2000 kp cm⁻² 3=2965
 Si transistor, current gain change rel. to applied stress 4=28603
 (Sr, Pb)(Ti, Zr)O₃, props. 0=21236
 Te, piezoresistance 1=17448
 Te, 77-450°K 2=4105, 8473
 TiO₂ p-n junction films 3=13127
 ZnO 0=16027
 ZnO piezoelectric scattering rel. to phonon drag 1=17857
 ZnS, meas. and model 3=8556
 ZnS, piezo-, elasto-, and electro-optic constants 1=7702
 ZnS-type crystals, properties 1=899
 ZnSe, meas. and model 3=8556
 ZnTe, meas. and model 3=8556

Piezoresistance

(Heading introduced in 1963, for earlier entries see Piezoelectricity)

- metal films, var. strain-sensitivity coeff. 4=25997
 semiconducting devices, recent advances review 3=22969
 semiconductors, 4=15527
 semiconductors, diffused layers 3=10753
 BaTiO₃, secondary piezoresistivity 3=10879
 Bi, elastoresistance meas. 4=26032
 Bi films, var. thickness and impurity 4=20355
 Cr-Si films 4=26502
 GaSb, p-type, piezoresist. 77°-350°K 4=12892
 Ge, diffused layers 3=10753
 Ge doped with As, 1.3°K with uniaxial compression 3=10765
 Ge films 4=26502
 Ge, rel. to impurities, 77° to 600°K 4=6963
 Ge, low temp., donor conc. var., four-valley model 4=20387

Piezoresistance—contd

- Ge, n-type, degenerate, valley splitting 3=10787
 Ge, n-type, impurity conduction 4=12896
 Ge, p-type, in impurity conduction region 4=28559
 Ge, piezoresistance of n- and p-type, review 4=26046-7
 Ge polycrystalline films 4=6958
 Ge, Sb- and As-doped, rel. to compression, 1° to 300°K 3=22931
 K 4=20332
 Li 4=20332
 Na 4=20332
 PbSe, rel. to band structure 3=15594
 PbSe, rel. to energy band structure 3=15592
 PbTe, rel. to band structure 3=15594
 PbTe, rel. to energy band structure 3=15592
 PbTe, 4.2-300°K, p-type 4=6981
 Si diffused layers, n- and p-type 3=10798
 Si, n-type 4=1621
 Si, n-type, resistance and Hall effect 3=15582
 Si, P-doped, meas. method, 20° to 150°C 4=12914
 [SN]_x polymer, rel. to semiconductivity and spectra 4=15545

Piles, nuclear fission

See Nuclear reactors, fission.

 binary distribution function, evolution eqn., nonequilibrium state 1=2962
 blobs, interaction with transverse mag. fld. 4=27520
 body moving in, collision effects 4=506
 Bogolyubov formalism, correlation functional representation 4=29901
 Bohm diffusion coefficient from instability meas. 4=2974
 Boltzmann equation, for ionized rarefied gas, in strong fields 1=7050
 Boltzmann eqn., linearized, particular solution 3=14565
 Boltzmann eqn., spherical harmonics formulation 1=15740
 Boltzmann-Vlasov eqn., Lagrangian formulation 0=1138
 Boltzmann-Vlasov eqn. for quantum plasma 0=15006
 book on theory 4=24627
 boundary layer between plasma and mag. field 1=18850
 boundary layer, effect of external magnetic field 2=7611
 boundary with mag. field, location, correction 3=16307
 boundary value problems 2=3038
 bounded, collective electron instability 3=21763
 bounded, particle dynamics 3=12220
 break-up, diffusion mechanism, in mag. field, He data 1=4603
 bremsstrahlung cross-sections in plasma frequency neighbourhood 4=11611
 bremsstrahlung, from electron in Coulomb field 4=512
 bremsstrahlung, friction, relation between 2=13557
 bremsstrahlung, generation, internal absorption 3=5682
 bremsstrahlung, from high-temp. plasmas, relativistic calc. 2=193
 bremsstrahlung losses, e-e and e-ion collisions 0=15026
 bremsstrahlung losses, no coherence effects 3=21789
 bremsstrahlung losses, relativistic electron temperatures 1=8322
 bremsstrahlung, nonrelativistic, Gaunt factors 3=1969
 bremsstrahlung and recombination radiation, emission 4=2980
 bremsstrahlung from relativistic plasma, var. with temp. 4=5615
 bremsstrahlung spectrum and cond., electrical, calc. 3=14563
 broadening and shift of spectral lines of He and A 0=13417
 Brownian motion in mag. field, diffusion 4=502
 bulk-, surface-, and "string" instabilities, growth and properties 3=7538
 bumpy torus 0=7123
 bumpy torus, Ar, afterglow 3=19270
 bunch, movement along guiding electrodes 3=399
 bundle movement along guiding electrodes 3=19250
 burst acceleration by mag. field 4=11643
 C-Stellarator, u.h. vacuum system 1=4619
 cable, e.m. wave propag. 2=7763-5
 caesium plasma cell, performance 1=1912
 caesium recombination radiation, in homogeneous magnetic field 1=18890
 capacitor banks, low-inductance, for D pinches 1=5476
 cathode drop, theory, review 2=206
 in cavity resonator, forces on charged particles 1=1906
 charge correlation function in mag. field 1=4595

Plasma—contd

charge excitation of motion in magnetic field 1=304
 charge moving in vacuum over plasma, energy loss 3=14746
 charge, nonlinear energy losses 4=14648
 charged part. transition radiation 3=5681
 charged-particle beam interaction, electrostatic instabilities, in mag. field 2=17826
 charged-particle beams, two-stream instability 2=5358
 charged particle bunch, polarization energy losses 4=11594
 charged particle collision integrals in mag. fld. 3=5829
 charged-particle density, meas. 2=19911
 charged-particle drift, in const. grad. mag. field 0=5314
 charged-particle emission, in mag. field 3=21772
 charged-particle energy losses 2=13566
 charged particle energy losses 3=5673
 charged particle interaction with all electrons 4=8678
 charged particle interact. with totality of electrons, theory 4=14645
 charged particle motion in absence of mag. field 1=1958
 charged particle motion in alternating fields 3=387
 charged-particle motion, in axially symm. magnetostatic field 1=16506
 charged-particle motion, in inhomogeneous mag. field 2=9582
 charged-particle transition radiation 2=9588
 charged particles in a.c. fields, time-averaged effects 1=4698
 charged particles in cusped geometry, trajectory analysis 3=19246
 charged particles energy loss, theory 4=11584
 charged-particles, in mag. field, Brownian motion 2=7591
 charged particles passing through, energy losses 0=10906
 charged particles relax., fluctuating velocity distrib. 4=27551
 charged particles, temp. relaxation 4=11591
 Cherenkov and anomalous Doppler effects 2=9563
 Cherenkov and cyclotron radiation, theory 2=191
 Cherenkov(hydromagnetic and magnetoacoustic) waves 1=4606
 Cherenkov radiation 1=10704
 Cherenkov radiation absorption 1=3159
 Cherenkov radiation of fast moving charge 3=12436
 Cherenkov radiation in, at high temp. 0=1268
 Cherenkov radiation for particle moving parallel to field in plasma 4=5616
 circuit dynamics 0=5303
 circular conductor, in mag. field, equilibrium configurations 0=9168
 circular current, relativistic radiation 2=15931
 with circulating currents, in crossed elec. and mag. fields 4=21501
 classical and quantum, dynamic behaviour 1=9538
 classical, variational approach 1=11923
 cloud, structure, in e.m. driven shock tube 4=18826
 cm wave refraction, meas. 2=13565
 coaxial accelerator, current sheet, planarity 3=7599
 coherent energy loss of electron beam, meas. 4=16508
 coherent light transmission 3=12138
 in coil, impedance calc. 0=10900
 coils, elec. field, calc. 2=235
 cold, highly ionized, on magnetic field, diffusion and recombination 1=16322
 cold, interaction with guided e.m. waves 0=17017
 cold, magnetoactive, Cherenkov radiation spectra 2=7594
 cold, nonlinear space charge effects 3=12101
 cold planetary body, condensed matter, physical state 0=16532
 collapse accelerators with internal injection 1=13095
 collective and collisional correlations, kinetic eqn. 3=4122
 collective description and Landau damping 3=7618
 college course, outline 4=11006
 colliding streams, mutual interactions, perturbation theory 0=12605
 collision-free, gas law and conductivity, formulae 1=10702
 collision-free, hydromagnetic disturbances 0=19679
 collision-free shocks, thickness and speed meas. 0=10904
 collision integral for charged particles in mag. field 3=5654
 collision of two plasma streams, stability 0=17013
 collisionless Boltzmann eqn., soln. 0=16621

Plasma—contd

collisionless, nearly spatially uniform, Boltzmann eqn. 1=15723
 collisionless, scalar pressure assumption 1=18851
 collisionless, shock wave models 1=8328
 collisions, close, kinetic eqn. 3=5650
 collisions, conservation laws and correlation functions 1=15744
 collisions, in cusped mirror-geometry mag. fields 2=17832
 collisions, effect on localization of electrons in high-freq field 4=8673
 column, dynamic stabilization 1=502
 column in ext. longitudinal mag. field, theory 1=9578
 column with heat losses at electrodes, temp., theory 1=9577
 column irradiated with microwaves, magnetic effects 2=3035
 column, in longit. mag. field, radial distrib. of various quantities 3=19235
 column, stationary state at high temp. and pressure 1=11919
 column, thermally inhomogeneous 4=18811
 columns, confined by mag. flds shock waves, longitudinal 3=7530
 comet dynamics 2=15319-20
 in cometary heads 3=3553
 completely ionized, test particles 0=3774
 completely ionized, in variable mag. field, kinetic eqn. soln. 0=9033
 composition and energy distrib. meas. 3=7588
 composition and thermodynamic props., gas mixtures at high temp. 4=24634
 compressible, variational principle 2=5331
 compression in axially-symmetric mag. fields 0=2367
 compression by azimuthal currents 3=7564
 compression in cusp geometry 1=18869
 compression, in direct conversion of heat 2=9519
 compression, fast Bz, rotation and instability 3=7570
 compression heating in linear z-pinch 1=18880
 compression, magnetic, of cylindrically symm. plasma 2=11654
 compression, magnetic, with end losses, theory 2=17840
 compression, magnetic, and X-ray emission 2=3046
 compression, radial and axial, in a.c. mag. field 1=4598
 compression, rapid, by own mag. field 1=7059
 conductivities, thermal, elec., high temp. review 4=236
 conductivity, a. c., theory 4=29906
 conductivity, complex, and stability, hydrodynamic theory 4=24643
 conductivity dependence on frequency and collision time 1=8326
 conductivity, elec., h.f., non-uniformity error 4=21499
 conductivity elec., Lorentz gas 4=21498
 conductivity, electrical, meas., by magnetic probe 3=5598
 conductivity, electrical, meas., without electrodes 3=5677
 conductivity and electron relax. rel. to radiative effects 3=5671
 conductivity and equation of state studies 0=14984
 conductivity, high-freq., in presence of direct current 3=1978
 conductivity, high-frequency, in magnetic field 3=19244
 conductivity in hot plasma 1=9557
 conductivity kernel and perturbation accrual along particle histories 4=2969
 conductivity, microwave, in mag. field 0=12607
 conductivity, in presence of a drift 3=16939
 conductivity of seeded atm. pressure plasmas, calc. 1=16309
 conductivity tensor and dispersion eqn. 3=1962
 conductivity, thermal and electrical, from temp. profile 3=7589
 conductivity thermal, Grad approx. appl. 4=5598
 conductivity, thermal, relativistic plasma in mag. field 4=14647
 conductivity and velocity meas., mag. probe 3=1995
 conference (Culham Lab., 1963) 4=5589
 conference, ionization in gases, Munich (1961) 3=1928
 conference, Leatherhead, (1962) 3=7450
 conference, Paris (1963) 4=11507
 conference, Salzburg (1961) 3=7494
 conference (Salzburg, Sept. 1961) 2=15908
 conference, Salzburg (1961) 4=5588

Plasma—contd

conference, Tarrytown (1962) 3=5649
 conference, Uppsala (Aug. 1959) 0=2314
 configurations, in axially symmetric mag. fields, low β density plasma 1=2967
 confined electron streams, zero ion temp. 2=3043
 confined, hot, high density, steady state 3=14556
 confined hydrogen plasma, relativistic electron beam device for fusion 0=19670
 confined, by r.f. field, self-consistent calc. 3=7555
 confinement using alternating magnetic field 3=12146
 confinement, analysis of transition region to mag. field 2=1437
 confinement, configs. of h.f. e.m. and magnetostatic fields 3=4141
 confinement, corrugated mag. field 2=5345
 confinement, cusp, cylindrical multipolar 3=16947
 confinement, cusped magnetic traps, review 2=15923
 confinement, by d. c. mag. field and external force 2=13569
 confinement by diffuse reflecting wall 3=9375
 confinement by dipole mag. field rotating at 1.3 Mc/s 3=4140
 confinement, e.m. trap, conditions for low-density plasma 3=19274
 confinement by electromagnetic waves 0=7121
 confinement of electron gas by mag. field 1=13089
 confinement, electrostatic 3=19272
 confinement and energy balance in a rotating plasma 0=19667
 confinement by external magnetic fields 0=3763
 confinement, by h.f. elec. fields 2=17842
 confinement, h.f. em. and static mag. fields, resonance, theory 3=14589
 confinement, heating by magnetoacoustic waves 0=11035
 confinement, and heating, by orthonormal pinch 2=15921
 confinement, helical conductor in torus or linear system 0=16997
 confinement in helically invariant mag. field 3=21940
 confinement in Heliotron B mag. field 3=1990
 confinement, by Heliotron mag. fields 2=22224
 confinement by Heliotron magnetic field 1=16334
 confinement, with high mag. field at periphery 1=18884
 confinement, in mag. bottle 2=5346
 confinement by mag. and e.m. fields, device 3=21794
 confinement in mag. field rel. to thermonuclear fusion 0=3757
 confinement by mag. fields, errors 3=9801
 confinement, mag. mirror, of exploding-wire plasma 1=18870
 confinement, by mag. mirrors, adiabatic approx. 2=22221
 confinement, magnetic mirror, rate of particle loss from ends 0=15008
 confinement magnetic mirrors and cusps, Ne¹⁹ tracer study 3=7568
 confinement, magnetic, motion and particle number 3=24292
 confinement, magnetic, multipole field configs. 2=3044
 confinement, magnetic surface properties 2=15959
 confinement in mirror mag. fields 1=10719
 confinement by multiple fields 1=13091
 confinement, new method using axial mag. field 1=16333
 confinement, optimum energy 3=12176
 confinement, in pulsed mag. cusps 1=7082
 confinement by pulsed mag. field, 3 keV D plasma 1=5467
 confinement, by r.f. e.m. fields 0=19666
 confinement, by r.f. fields 2=11670, 13567
 confinement by r.f. fields, treatment of dense plasma as a metal 1=5461
 confinement, r.f., 1-dimensional theory 3=9796
 confinement by r.f. standing wave 1=10708
 confinement, reflection of high-temp. plasma by mag. field layer 3=19273
 confinement, region of mag. surfaces bounded by separatrix 2=19972
 confinement, in resonant cavities, analogue study 2=5347
 confinement, of rotating magnetized plasma 1=11946
 confinement, self, adiabatic approx. 2=19965
 confinement by standing e.m. wave 0=12610
 confinement, static magnetic mirrors 3=7567
 confinement, in steady electric and magnetic fields 1=9564
 confinement, steady-state, effect of mag. field 2=15922
 confinement, for thermonuclear reactions 0=7677

Plasma—contd

confinement, in theta pinches, framing-camera evidence 1=5466
 confinement time 2=7606
 confinement in toroidal theta pinch 3=7569
 confinement transition region separating plasma from mag. field 3=7566
 confinement, in ZETA, spectrosc. study 2=5349
 conservation eqns. in presence of radiation 3=12102
 constitutive eqns., plasma-like medium 3=21847
 containment, "corkscrew" device for changing particle mag. moments 1=10717
 containment of dense plasmas, h.f. potential well 1=4612
 containment, heating and energy-loss reduction, mirrors and external injection 0=259
 containment, by mag. field 0=255
 containment by r.f. and d.c. field combinations 0=5322
 containment, self-consistent reversed field sheath 1=10710
 containment studies, C-stellarator 3=12187
 containment studies, C-stellarator, coils, stresses and temp. 3=12189
 containment studies, C-stellarator, power supply 3=12188
 containment, three-dimensional, by orthog. standing waves 3=19428
 containment, by travelling-wave focusing 0=1135
 continuously flowing, e.m. acceleration 1=16303
 continuum description, equil. props. rel. to net charge density 4=11569
 continuum theory, charge density function rel. to thermodynamic and equilibrium props. 4=11583
 contracting conducting cylinder, mag. flux, time depend. of radius 1=7045
 contraction, in pulsed discharge 1=7044
 contraction, to sphere, residual flux 1=7060
 contraststreaming, instability, resonance distrib. functions 2=7599
 convection, of positive column, with mag. field 2=17833
 convection, turbulent, in mag. field 2=15913
 convection of weakly ionized plasma in nonuniform external mag. field, theory 4=11581
 convective flexure of plasma conductor 3=21777
 convective instability 0=15013
 convective, instability theory 2=7600
 converter, direct thermal to electrical 3=7423
 converters, space-charge instabilities 2=1500
 cooperative interactions, plasma-wave turbulence, shock-wave prod. 1=5442
 correlation function soln., two-body 4=24631
 correlation functions, quasilinear approx. 4=16504
 cosmic plasma jets, and hyperthermal wind tunnels 2=24142
 and cosmical electrodynamics 0=16520
 Couette flow, in mag. field 0=19652
 Coulomb interaction, in plasma with anisotropic temp. 2=19940
 Coulomb interaction in uniform mag. field 3=7509
 Coulomb interactn., in uniform mag. field 3=386
 Coulomb scattering of charges in strong mag. field 0=19683
 Coulomb scattering in magnetic field 0=19618
 covering magnetic line source, anisotropic 2=13689
 created by ionizing electron beam props. 2=17817
 "crowbarred" rotating, magnetohydrodynamic swirls 2=19948
 current constriction mechanism 0=5302
 current flow between electrodes immersed in low gas press. plasma 4=18938
 current-layer diffusion in one-dimensional pinch 3=1989
 current sheet formation, and implosion 2=3039
 current transport eqns., effect of ionization of molecules 0=19685
 current-voltage behaviour 3=5655
 currents bet. moving plasma and cold electrodes 3=21755
 cusp compression experiment 3=12147
 in cusp-mirror magnetic field, behaviour 2=22225
 cut-off theory of one- and two-component plasmas 1=15735
 cyclotron emission from non-Maxwellian distrib. 1=8323
 cyclotron frequency, in varying magnetic field 2=3882
 cyclotron frequency in varying magnetic field 3=2776
 cyclotron instability, for anisotropic ion vel. distrib. 1=7071
 cyclotron instability, in uniform mag. field 3=24315
 cyclotron radiation 3=7607

Plasma—contd

- cyclotron radiation analyser 2=19861
 cyclotron radiation, ang. distrib., at high temp. 1=4607
 cyclotron radiation of electrons 3=12112
 cyclotron radiation emission, spectral and ang. distr. 0=2500
 cyclotron radiation in fusion reactors 1=9618
 cyclotron radiation, h.f. tail 1=16323-4
 cyclotron radiation from hot plasma 0=3773
 cyclotron radiation from hot plasma 1=9573
 cyclotron radiation, incoherent, at high temp., 1-particle model 1=4608
 cyclotron radiation linewidth for Coulomb interact., nonadiabatic case 4=8705
 cyclotron radiation from single particle near walls and sheaths 4=5614
 cyclotron radiation, by Vlasov eqn. 3=9786
 cyclotron resonance 1=16311
 cyclotron resonance in magnetic field of helix 3=12122
 cyclotron resonant, harmonic generation 0=258
 cyclotron waves of ions due to h.f. e.m. waves 1=5487
 cyclotron waves of ions due to h.f. e.m. waves 1=11959
 cylinder in low density, moving plasma, static potl. 3=7533
 cylindrical configuration, in rectangular waveguide 4=24664
 cylindrical, elec. field diffusion 2=17825
 cylindrical, electron density det. from e.m. wave diffraction pattern 1=8320
 cylindrical, electron and ion layer motion 2=17831
 cylindrical gaseous conductor in mag. field, stability 0=5313
 cylindrical, in longit. mag. field radial distrib. parameters 3=4119
 cylindrical; magnetoacoustic resonance 3=397
 cylindrical, pinch motion 3=19262
 cylindrical, rotating about axis, stability 2=183
 cylindrical, stability in magneto-hydrodynamics 2=17829
 cylindrical, with volume current, stability 0=10911
 D.C.X. machine, fast ion lifetimes 1=16349
 in DCX-1, instrumentation 2=7627
 in DCX, proton energy distrib. 2=15929
 DCX-2, accumulation by high-energy injection 3=12203
 damping of Raleigh-Taylor instabilities in thetatron, discharge 1=18826
 damping of satellite wake in ionosphere 0=15129
 data from space vehicle study of outer ionosph. 2=19213
 Debye—Hückel potential, bound states 4=18791
 Debye—Hückel potential, energy levels 3=3746
 Debye—Hückel theory, corrections 1=4275
 decay, anomalously fast, in mag. field 4=14644
 decay in cylindrical container in mag. field 4=18899
 decay, by diffusion of particles in mag. field 3=14591-2
 decay in toroidal mag. field, effect of drift, meas. 4=11600
 decay in toroidal mag. field, theory and expt. 4=18813
 decaying, diffusion in mag. field meas. 4=14643
 decaying, optically thin, excited atoms and radiated power 3=21779
 dense, electric field distribution 1=300
 dense, ionization—equilibrium eqn. of state 3=3590
 dense, ohmic heating, theory and expt. 4=18805
 density distribution, stationary, in e.m. field 1=7067
 density fluctuations, in magnetic field 1=18819
 density profiles, microwave determination 0=5321
 detonation generated 1=12915
 detonation-generated, propag. characteristics 0=1133
 deuterium, directed flow into vacuum magnetic cusp field 0=15033
 deuterium, electron density, interferometric meas. 3=7582
 deuterium, fusion experiments 0=17645
 deuterium, high-current, in longit. mag. field 0=5312
 deuterium, hot, production and containment 3=12150
 deuterium, ion cyclotron waves 0=15046
 deuterium, magnetic compression, efficiency of pre-ionization 1=2969
 deuterium, moving magnetic field behind shock front 0=1196
 deuterium, in Scylla, high-temp., X-ray spectra meas. 3=7581
 development by injection of fast particles 3=12105
 device similar to Berkeley Homopolar, description 1=16345
 devices, scaling relations 1=16341

Plasma—contd

- devices, thermoelectric, theoretical and practical aspects, review 1=11904
 diagnostics, microwave scanning 1=18889
 diamag. instability, large ion Larmor radius 3=7546
 diamag. moment, by spin resonance technique 0=19693
 diamagnetic instability, large ion Larmor radius 2=19955
 diamagnetism of a gaseous discharge, study by e.s.r. and n.m.r. of foreign substances 1=7074
 dielec. permeability, spatial dispersion, relativistic isotropic plasma 3=4127
 dielectric coeff., Lorentz polariz. term 3=4112
 dielectric const. and equil. correl. function theory 4=11568
 dielectric const., longitudinal 3=14564
 dielectric const., space dispersion 1=10695
 dielectric function for classical system 3=16549
 dielectric permeability, spatial dispersion relativistic isotropic plasma 2=185
 dielectric tensor calc., moving and finite temp. plasmas 4=14634
 dielectric tensor of inhomog. plasma, theory 3=21787
 dielectric tensor suscept. for population inversion 3=8202
 diffraction, electromag. waves, conducting cylinder clad by plasma 3=19446
 diffuse linear pinch, hydromagnetic stability 0=15014
 diffusion, abnormal, perpend. to mag. field 3=388
 diffusion across a mag. field, appl. of fluctuation theory 1=7077
 diffusion across mag. field, collisional 4=499
 diffusion across mag. field, nonlinear ambipolar, theory 4=11595
 diffusion, across mag. field, effect of oscillations 4=546
 diffusion across magnetic field 0=19668
 diffusion across magnetic fields 1=2970
 diffusion, ambipolar inertia-controlled 3=5462
 diffusion, ambipolar, and vol. recomb., rel. to electron density 4=14641
 diffusion, ambipolar, in weak mag. fld. 3=7603
 diffusion, anomalous, across mag. field 2=7602
 diffusion anomalous, with current in magnetic field 3=14573
 diffusion, anomalous, in ion cyclotron reson. 4=29909
 diffusion, anomalous, in mag. field 4=16470
 diffusion, anomalous, from microinstabilities 3=5652
 diffusion break-up in mag. field 0=17015
 diffusion charge carriers, approx. calc. 3=21761
 diffusion of charged particles across magnetic field 1=4604
 diffusion of charged particles across mag. field 4=11601
 diffusion of charged particles in mag. field 3=21790
 diffusion, charged particles, stable, mag. plasma 4=8693
 diffusion coeff. and long range forces 1=5446
 diffusion-controlled column, Schottky's theory 2=184
 diffusion-controlled column, transport phenom. theory 2=11638
 diffusion, current effects, classical and Bohm enhanced density—rad. rel. 4=27514
 diffusion, decay in mag. field 2=22220
 diffusion decay in mag. field 3=14575
 diffusion, decay in mag. field, non-linear equ. soln. 4=21496
 diffusion decay in mag. field, theory 4=29908
 diffusion, due to excitation of ion-acoustic oscillations 3=21842
 diffusion for high ionization, rel. to ion density, meas. 4=11597
 diffusion, instability 2=11653
 diffusion of ions across mag. field 1=11931
 diffusion, with loss due to electron-ion recombination 2=7592
 diffusion, in mag. field 2=188
 diffusion in a mag. field 4=501
 diffusion in mag. field, Cs, not Bohm 4=27515
 diffusion in mag. field, like-particle collisions 3=24286
 diffusion, in mag. field, low temp., survey 2=22208
 diffusion in mag. field rel. to pressure and extension 4=500
 diffusion in mag. field, transverse, meas. 4=11599
 diffusion in mag. fld. 3=7522
 diffusion in magnetic field, effect of "drift" waves 3=24322
 diffusion in magnetic field, rel. to Coulomb collisions 3=19239

Plasma—contd

- diffusion meas. from line source in mag. field 4=11598
 diffusion perpendicular to magnetic field 4=8691
 diffusion processes, carrier distribution 0=7111
 diffusion processes, column in longit. mag. field 0=15023
 diffusion, "resonance", in mag. field, Brownian motion theory 4=11596
 diffusion in stellarator 1=9616
 diffusion in systems with particle losses 1=9553
 diffusion theory in magnetic field 3=403
 diffusion theory, stochastic methods 3=12124
 diffusion, transverse, in inert gases in mag. field 4=5602
 diffusion, turbulent, in strong mag. field due to drift instab. 4=5666
 diode energy converter, with Cs electrodes 2=19887
 diode, film boiling liquid metal anode 2=17776
 diode fuel element, neutron flux in cathode 2=22161
 diode, inverted, coaxial; design 2=13575
 diode, kinetic theory for low plasma density 3=14511
 diodes, cathode processes, as m.h.d. energy converter 3=21816
 diodes, planar, stability 4=443
 dipole field bounding surface, computation by moment technique 2=9577
 dipole resonances in mag. field 4=2973
 direct conversion of electricity, appl. 3=5618
 discharge current flow, in coaxial source 4=24640

 equilibrium props. of partially ionized plasma 1=9558
 equilibrium, in spatially periodic mag. field 4=14696
 equilibrium statistical mechanics, chemical potential rel. to micropotential distrib. function 4=11582
 equilibrium theory, from kinetic theory of electron gas 4=18792
 evolving, electron density meas. 0=7113
 excitation, of bounded plasma, by electron beam 2=19944
 excitation, long-wavelength modes 3=12139
 excited states population, metastable atoms effects 4=11609
 expansion, electro-acoustic velocity 2=7604
 expansion in external magnetic field 4=27519
 expansion meas., slow, into vacuum 4=8668-9
 expansion, positive ion acceleration 1=18789
 exploding wire, mag. mirror confinement 1=18870
 exploding wires, interaction with microwaves 3=4103
 exploding wires, jacket, creation process 3=4102
 exploding wires, pinch effect 3=4139
 exploding wires under water, temp., and ionization 4=21520
 expt., capacitor bank, spark-gap switching 3=3972
 expulsion of plasma ring from magnetic "mirror" 1=5457
 expulsion of plasma ring from magnetic "mirror" 1=11943
 external electric and magnetic fields, effects 4=8775
 Faraday rotation, electron density measurements 1=9597
 fast ion thermalization 1=2960
 fast ion, thermalization, analytic solution 3=19248
 fast magnetic compression 0=19664
 fast particle motion, weak stationary turbulence effect 4=29907
 filament, current-carrying, eqns. of motion 3=21796
 filamentary structure, with force-free mag. fields 2=9692
 finite, diffusion in uniform mag. field 0=17014
 fission into two filaments in hot plasma 1=18827
 flames, caloelectric effect 3=19184
 flames, intermediate gas region 3=14399
 in flares, solar, cosmic ray prod. by pinch effect 1=26
 floating multiple probe systems 2=19975
 flow across mag. fld., convective instability 4=19049
 flow, almost one-dimen., magnetohydrodyn. 3=7514
 flow in axial magnetic field 0=7119
 flow behind shockfront in T-tube 4=18831
 flow, chemical reaction effects 4=16138
 flow, forbidden zones, theory 3=16936
 flow, in high-current arcs, streaming velocity 0=19644
 flow, high-energy, in magnetic guide field 4=18824
 flow at high temp., experiment and theory 3=7587
 flow into perpendicular magnetic field 4=18821
 flow, magnetogasdynamic, between coaxial cylinders with potential between 3=17044
 flow, 1-dimensional, between parallel plane walls 2=3042
 flow, quasi-one-dim., magnetohydrodyn. 3=21791
 flow round three-dimensional dipole 4=2976
 flow, slip, macroscopic electron-ion energy exchange 4=14637
 flow stability of longitud. plasma in mag. field 0=7126

Plasma—contd

flow, stationary, axially-symmetrical, across azimuthal mag. field 4=16472
 flow, through mag. barrier 1=18847
 flow, transverse to magnetic field, short-circuiting 2=17823
 flow into vacuum in mag. fields 1=4597
 flow into vacuum magnetic cusp field 0=15033
 flowing, e.m. field interaction 3=16945
 flowing ionized gas, electrode heating 2=20131
 flowmeter, absorbing 3=21802
 fluctuating microfield and multiple collision 1=8330
 fluctuations 3=5653
 flute disturbance stabilization, by Coriolis force 2=15927
 flute type instability 0=12618
 focusing method 1=5470
 focusing method 1=11947
 Fokker-Planck coefficients, including cyclotron radiation 3=12109
 Fokker-Planck coefficients, relativistic 1=7076
 Fokker-Planck coeffs. for one-dim. plasma 3=4115
 Fokker-Planck eqn., cartesian tensor expansion 4=2599
 Fokker-Planck eqn. formulation incl. excitation effects 4=11585
 Fokker-Planck eqn., friction and diffusion coefficients 1=16320
 Fokker-Planck eqn., soln. 0=19657
 Fokker-Planck equation 0=9024
 Fokker-Planck equation for plasma with constant mag. field 1=9546
 forces due to h.f. field, with static inhomogeneous mag. field 4=14697
 formation by h.f. e.m. fields, and pinches, orthogonal 3=14590
 formation by low-energy ion injection and cyclotron heating 1=8333
 formation in side arm of T-shaped shock tube 4=5288
 free-electron removal method 2=15933
 free energy at infinite dilution 4=18796
 free-space discharge prodn. at focal point of e.m. standing wave 3=7592
 friction and diffusion coeffs. of Fokker-Planck eqn. 1=16321
 front velocity in shock tube 4=18832
 fully-ionized, ohmic heating, electron-ion collisions 0=10898
 fully ionized, quadratic Stark effect on non-H lines, review 4=18853
 fully ionized, r.f. probe meas. 3=7575
 fusion reactions in unconfined plasma 0=20532
 G-factor, microwave detm. 3=4152
 γ -rays of discharge in mag. trap 3=7512
 gas density, electron concentration, interferometric method 2=199
 gas-discharge, radiation energy loss 0=15025
 gas filter for cutting off particles from radiation 3=24274
 use for gas flow visualization. 3=157
 gas, radially constricted between electrodes, temperature estimation 1=8332
 general equation, with electrons, positive and negative ions; boundary value problem 3=7495
 general theory 0=2357
 generation and amplification of millimetre waves, survey 3=5835
 generation, by collective beam-plasma interact. 2=22204
 generation, in discharge, with thermionic cathode in mag. field 2=7605
 generation, by elec. arc, in space propulsion 2=11635
 generation, high-pressure, and temp., by mag. compression 2=9566
 generation, highly ionized with low-impurity level 2=15909
 generation, in hollow-cathode discharge 2=17794
 generation, by mag. trapping of energetic atoms 2=15912
 generators, based on d.c. arc, review 2=19974
 glow discharge, positive column electron and gas temp. 1=16284
 gravitational instability, of magnetized plasma 2=7619
 Green's functions, Schwinger's method derivation 1=7072
 Guernsey-Balescu eqn., rel. to relax. time 4=14630
 guiding centre approx. to particle motion 1=16405
 guiding centre motion and plasma behaviour in Bumpy Torus mag. field 4=16474
 gun, acceleration between coaxial electrodes 2=1457

Plasma—contd

gun, current sheet 2=7630
 gun, electrodeless 3=12207
 gun, electrostatic high-energy type 1=18891
 gun, fast-acting valve design 3=19285
 gun, hydromagnetic 1=16342
 gun, inductive 3=21809
 gun, ion-energy distrib. meas. 2=11677
 "gun", mag. operated, calc. 3=9808
 guns, shock-wave phenomena 1=11777
 guns, two coaxial, high vel. source 3=7520
 gyro-electric-magnetic medium, e.m. wave propag. 2=22202
 h.f. heating, in axial mag. field 0=10899
 h.f., mass separation and pinch effects 3=24294
 h.f. potential well for dense plasmas 1=4612
 h.p. discharges, probe meas. of local potentials 0=16992
 Hall effect in cylindrical column 4=18825
 Hall effect, mechanical analogy 1=5562
 Hall instability, slightly-ionized plasma 3=24272
 Hamiltonian and other systems, asymptotic theory with nearly periodic solutions 3=11669
 heat transfer in cooled tube 1=18842
 heat transmission, through flowing gas, from solid 0=5053
 heat wave propagation, with frontal radiation 0=10798
 heating by acoustic fields 1=9595
 heating by anomalous dispersion of Alfvén waves in inhomog. mag. field 4=5670
 heating of circularly polarized waves, exptl. verification 3=16951
 heating by collapsing magnetic fields 3=12173
 heating, collision-free 0=3758
 heating conditions, by optical generator radiation 4=11645
 heating and confinement, high power r.f. pulse generator 4=8596
 heating by current saturation 0=9036
 heating, by cyclotron resonance 1=7058
 heating by e.m. fields, magneto acoustic reson. 3=7613
 heating, e.m. wave, circularly polarized 3=21786
 heating by h.f. field of travelling wave 4=5665
 heating by ion cyclotron 1=9617
 heating by laser, correlation regime 4=27544
 heating due to longitudinal current 4=5668
 heating, by mag. shock compression 0=4155
 heating, by magnetic piston 1=7419
 heating, by microwave absorption, sheath configuration 0=12602
 heating, ohmic, of positive ions in impure plasma 1=9596
 heating, in periodic elec. field 3=24281
 heating, by polarized r.f., trapped in pulsed mirror field 3=9783
 heating, turbulent 4=16464
 heavy charged-particle passage through, energy loss 2=9581
 heavy-current toroidal discharge tubes 0=5305
 helical instability of linear discharge plasma 3=12088
 in helical waveguide, slow-wave propag. 1=4724
 helix situated in a plasma, dispersion characteristics 1=12018
 high- β injection, into magnetic mirror field 2=1439
 high compression and neutral injection experiments, diagnostic techniques 2=7625
 high-current discharge in weak magnetic field, mechanism 3=12108
 high-current pulse discharges in conical chambers 0=5306
 high-current pulsed discharges 0=5320
 high-density, high-temp., production methods, by controlled magnetic compression 3=12163
 high-energy density, high press., investigation 0=5319
 high-energy particle magnetic trapping, ion trajectory and magnetic field calc. 3=12154
 high-energy particles, drift instabilities rel. to collisional relaxation 3=7526
 high-energy pulsed discharges, neutron and X-ray production 0=5317
 high-frequency, generation and oscillations obs. 2=1465
 high-power pulse discharges, spectroscopic study 0=5318
 high speed beams in vacuum arcs 4=29935
 high temp. 0=2359
 high-temp., Fokker-Planck equation 1=16319
 high temp. gaseous, production 0=2310
 high-temp. N, O, and air, absorption coeffs. 0=7120
 high temp. prod. in jets, He, Ar 3=21602

Plasma—contd

high-temp. rotating, review 0=4156
 high-temperature, dynamics, review 1=16330
 high-temperature, lifetime detm. on basis of neutron emission duration 3=1997
 high temperature plasma, stationary states, kinetic approx. 3=19235
 high-temperature, production problems, and collective interactions 4=496
 high temperature production torch, h.f. 3=7590
 highly-dense, spectroscopy, short-time, methods 3=7580
 highly-ionized, neutral atom density meas. by line radiation absorption 3=7579
 historical review 3=9764
 hollow pinch model using liquid conductor 1=9678
 Holtsmark microfield distrib., rel. to collision parameter cutoff 0=257
 Holtsmark theory generalization, considering "broadening" ions' thermal motion 4=18858
 homogeneous, interacting with radiation field, kinetic equations 4=21512
 homopolar device, stationary flow 2=5357
 "hot" component concn. meas. with "free" probes 3=21807
 hot, cyclotron radiation 0=10918
 hot dense, probe meas. at low voltages 4=528
 hot, and dense, radiation 2=7235
 hot-electron plasma, by beam-plasma interaction 3=16937
 hot, gas insulation, theory and expt. 3=12198
 hot, homogeneous and slightly ionized, conductivity tensor 1=16308
 hot, incoherent scatter 4=521
 hot, produced by electrolytic condenser bank 3=5656
 hot, stimulated-emission effects 4=509
 hydrodynamic eqns. 3=7497
 hydrogen, 1-30 atm., 1000-30 000°K; composition, density, enthalpy and specific heat 1=10701
 hydrogen plasma bremsstrahlung, Gaunt-factor 1=9569
 hydromagnetic equilibrium, theory 1=5566
 hydromagnetic gun 0=9034
 hydromagnetic Rayleigh-Taylor stability 1=18887
 hydromagnetic waveguides 0=11026
 hydromagnetic waves in discharge plasma 0=5383
 hydromagnetic waves excited by moving charge 0=5325
 interacting ions and dipole particles 2=11301
 with interacting particles, spectra, collective energy losses 1=2963
 interaction, and cm wave generation 0=19919
 interaction with charged-particle beam 1=2965
 interaction with charged-particle beams 2=11647, 19945
 interaction with charged-particle beam 3=21792
 interaction with a charged test particle, distrib. function of field particles 1=5440
 interaction of cold plasma with guided e.m. waves 3=7553
 interaction with e.m. field in cavity resonator 3=12136
 interaction with electron beam 2=11665
 interaction with electron beam, microwave amplification 1=5441
 interaction with electron beam, 1000-3000 Mc/s 1=257
 interaction with electron beams 0=12619
 interaction with electron beams 3=9781
 interaction with electron-ion beam, gain 3=24284
 interaction with electron-ion beam in mag. field 4=19011
 interaction with external current and flux 3=7598
 interaction with ion beam, wave excitation 2=9574
 interaction with l.f. e.m. waves 1=11939
 interaction with microwaves 1=9572
 interaction with microwaves 2=5340
 interaction with modulated charged-particle beam, radiation 2=190
 interaction with modulated electron beam 2=5341
 interaction with moving body 2=3049
 interaction with oblique e.m. waves 2=16042
 interaction with pulsed electron beams up to 8.5 amp. 4=16507
 interaction with radio wave at high temp. 3=7554
 interaction with radio waves 1=11940
 interaction with resonant cavity 3=14776
 interaction with standing e.m. wave, and const. mag. field 2=5339
 interaction of streaming plasma with dipole mag. field 4=18819

Plasma—contd

- interaction with test particle, energy loss 2=3027
- interaction with three-dimensional dipole 4=14692
- interaction with two-dim. mag. dipole 3=4125
- interface with neutral gas, coupling of m. h. d. to e. m. and acoustic waves 4=29912
- interference spectrometry, 0.1-10 mm 3=9957
- interferometer, microwave, reflected, modulated 4=30050
- interpenetrating, e. m. waves 2=15919
- interpenetration of two ionized gas clouds 1=13079
- interpenetration of two ionized gas clouds 3=16907
- interplanetary, direct obs. 2=12055
- interplanetary, flow round earth 3=9287
- interplanetary, investigation, instrument 1=15582
- in interplanetary rocket propulsion 1=16340
- interplanetary, solar effects 2=12091, 15302
- interstellar 0=3404
- inverse skin effect 0=1092
- ion accel. in beam, by fast electrons in mag. field 4=5600
- and ion accelerators, comparison 0=12615
- ion-acoustic waves, excitation, in periodic elec. field 3=24281
- ion beam injection, energy losses, in homog. mag. field 0=15011
- ion beam injection into magnetic trap, electrostatic 3=7651
- ion beam interaction and thermalization 4=11642
- ion beam neutralization by electron injection 3=12128
- ion beam neutralization by injection of electrons 1=18776-7
- ion beams, radiation emission in mag. field 2=5388
- ion centrifuge, currents calc. 2=19938
- ion cyclotron radiation, theory 2=192
- ion cyclotron resonance 0=10924
- ion cyclotron resonance, in r. f. field absorpt. 2=17843
- ion density, meas. 2=1416
- ion density, meas. by double probe in mag. field 1=8324
- ion diffusion from P.I.G. discharge transverse to mag. field, new instability 1=11956
- ion and electron distrib. functions and mobility for weak ionization 4=11512
- ion-electron relaxation in a high mag. field 1=244
- ion-electron relaxation in magnetic field 1=8319
- ion energy and density, in e. m. trap 3=19274
- ion energy distrib. from h. f. sources 0=12641
- ion energy, at high temps., thin-foil meas. method 2=9601
- ion energy in Zeta-type device 3=1999
- ion injection, fast, energy loss calc. 2=9570
- ion, maximum bound principal quantum number 4=11573
- ion motion, SCEPTRE III spectroscopic studies 1=235
- ion relax., fast, Butler-Buckingham rel. to Boltzmann calcs. 4=27512
- ion reson., r. f. probe obs., hot cathode Hg discharge 4=14681
- ion resonance in multicomponent cold plasma 1=7070

Erratum

 magnetic trap with rotating stoppers 1=4620
 magnetic traps, with corrugated field 1=7064
 magnetically accelerated, Rayleigh-Taylor instabilities 1=18888
 magnetically compressed, characteristics rel. to trapped field 3=12156
 magnetically confined, instability waves 1=9621
 magnetized, collision with non-ionized gas 1=5447
 magnetized, confinement and energy balance 1=7080
 magnetized, current-carrying; energy conversion mechanism 3=7527
 magnetized, energy balance and confinement 1=5459
 magnetized, energy balance and confinement 1=11946
 magnetized, interaction with neutral gas, rotating machine 1=2980
 magneto-acoustic resonance 1=4629
 magnetoacoustic resonance investigation with double electric probes 1=18858
 magnetoacoustic resonance, mag. field spatial amplification 2=19953
 magnetoacoustic resonance, mag. fld. spatial amplification 3=7544
 magnetoacoustic wave absorption, in const. mag. field 3=24283
 magnetoacoustic waves 4=14671
 magnetoacoustic waves, attenuation, anisotropic case 1=18862
 magnetoacoustic waves, in cylindrical column 2=19954
 magnetoacoustic waves in cylindrical column 3=7545
 magnetoacoustic waves, excited by charged particles 2=22211
 magnetoacoustic waves in non-isothermal plasma, dispersion eqns. 4=14672
 magnetoactive, dispersion of ion cyclotron waves 2=1435
 magnetoactive, in elec. field, e. m. fluctuations 2=189, 22219
 magnetoactive, moving-electron radiation 0=10919
 magnetoactive, passage of charged particles 2=11648
 magnetoactive, radiation from spiralling electron 2=22210
 magneto-acoustic resonance, heating by oscillating mag. field 0=19695
 magneto-compressional disturbance, in tepid plasma 2=1431, 11652
 magneto-fluid dynamic shock waves 1=10779
 magnetohydrodynamic channel, cross-field, end currents 2=9705
 magnetohydrodynamic eqns., derivation 1=13083
 magnetohydrodynamic power generator 0=9182
 magnetohydrodynamic shock in absence of particle collisions 1=11934
 magnetohydrodynamic shock wave propagation 1=5453
 magnetohydrodynamic toroidal system with scalar pressure, stability criterion 3=12129
 magnetohydrodynamic wave coupling, theory 4=29911
 magnetohydrodynamic waves, attenuation, anisotropic case 1=18862
 magnetohydrodynamics, engineering aspects, conference 4=14871
 magnetohydrostatic stability criterion 2=5457
 magnetomechanical effect, rotational, at low press. 3=21781
 magnetoplasma in a.c. field, transport coeffs. 3=9774
 magneto-plasma dynamic channel flow, induction-coupled 4=18822
 magnetoplasma effects in solids 1=7564
 magnetoplasma, electronic thermal cond. meas. 3=5668
 magnetoplasma halfspace, field of horiz. mag. dipole 3=21978
 magnetoplasma, microwave radiation 3=12115
 magnetoplasma, radiation from moving charge 3=24270
 magnetoplasmas, microwave reflection 3=24289
 magnetoresistance and Hall effect 2=18659, 21120
 magnetoresistance, high-field, for stratified medium 4=12866
 magnetosphere, energization theories 3=13699
 magnetosphere, ring currents 2=24051
 many-body collisions, effect on thermonuclear reaction rate 1=3478
 many-component, particle and heat fluxes calc. 4=8690
 mass and energy losses, of charged particles 2=11721

Plasma—contd

Maxwellian, drift instabilities 0=17006
 Maxwellian and magnetically confined, soln. 2=13571
 Maxwell's eqns. for cold plasma, solution 3=382
 mean free path, new formula proposed 1=9539
 meas., transients, by reflection e.m. waves, pulse 3=24301
 measurement, cavity method 3=19278
 measurement, density, by refractive index, laser interferometer 3=19276
 metal-derived, acceleration 1=16339
 metal, liquid, and thermal expansion-surface energy rel. 4=18174
 metal surface in contact, arc initiation 0=16991
 metallic, gaseous, equation of state 3=16927
 in metals, collective coordinate theory 4=12711
 metals, slowing-down of protons and μ^+ 3=22691
 in metals, spin fluctuations 1=7562
 in meteor trails, concentration near meteor 0=18712
 microfield and micropotential distrib., virial expansion formulae 1=10697
 microfield problem, Gaussian distrib. 4=518
 microfield, theory, Holtsmark-like distrib. function 3=12099
 microfields 1=16312
 microscopic theory, position correlations, radiation problems 1=15720
 microwave amplification in beam-plasma interaction 4=8671
 as microwave amplifier 2=7607
 microwave attenuation by cyclotron resonance 1=13087
 microwave diagnosis, electron distrib. 3=4136
 microwave diagnostic system, multiple-probe 3=4153
 microwave diagnostics, sources of error 2=19957
 microwave, elec. field as function of time 0=19669
 microwave emission, absorpt. at cyclotron harmonics 2=22237
 microwave emissivity of turbulent plasma with non-parallel orientation of turbulence elements 4=21506
 over microwave horn ground plane, rel. to radiation pattern 2=13687
 microwave interacts. 3=21488
 microwave meas., use of focusing lenses 3=7576
 microwave noise emission, thermal 3=1968
 microwave propag. 1=2987
 microwave propag. with parallel mag. field 3=7551
 microwave propagation 2=1602
 microwave propagation through magnetoplasma 1=7156
 microwave propagation, parallel to mag. field, electron motion effects 2=7614
 microwave radiation 3=7536
 microwave radiation, anomalous, at cyclotron resonance in partially ionized plasmas 4=5613
 microwave reflection from small-diam. columns 3=21785
 microwave resonance, in cylindrical plasma 2=17828
 microwave resonance in hot column 3=9782
 microwave scattering, Born approx. 2=22203
 microwave scattering, harmonics predicted 3=232
 microwave transmission at 8.7 mm 1=19023
 microwave transmission, 8.6 mm, circularly polarized 2=19958
 microwave transmission meas. of electron props. 3=9795
 microwave whistler mode propagation (in Zeta), diagnostic use 0=10916
 microwaves in ionized gas 0=2360
 migration across mag. field, transport theory 3=21774
 millimetre wave noise 3=4131
 mirror device (B-66), ion cyclotron waves 1=11960
 mirror instability for finite particle gyro-radius 3=12152
 mirror machine, electrostatic potentials 1=10714
 mirror machine experiments and atomic cross-section meas. 3=12204
 mirror machine, fusion reactions, self-sustaining, critical conditions 3=14601
 in mirror machine, velocity-space instabilities 1=7085
 mirror machines, synchrotron radiation 1=7084
 in mirror system, trapping and containment 3=16948
 mirror systems, electrodynamic injector 2=9603
 mirror systems, ion velocity distrib. 2=1438
 mirror systems, scattering losses 2=7621, 11679
 mirror systems, temporary capture of ions 2=17848
 model, one-dim., numerical expts. 3=9770
 model, 1-dimensional, as identical charge sheets 2=9571
 modern kinetic theory 3=7496
 in molec. ion injection mirror machine, O.G.R.A. 0=5840

Plasma — contd

momentum change techniques, in props. meas. 2=3048
 motion across mag. field 1=13084
 motion across magnetic field with electric field present 1=5452
 motion of charged particle, induced fields effects 4=505
 motion of charged particle in rotating mag. field 0=11021
 motion of charged particle, wake, in mag. field 4=2968
 motion, near container walls, microwave study 1=4616
 motion in curved mag. field 1=18848
 motion in curved mag. field 3=19267
 motion across magnetic field 1=303
 motion in front of shock wave 3=18897
 motion and heat transfer eqns., in mag. field 0=19651
 motion of rarefield plasma in inhomog. mag. field 1=18845
 motion in strong mag. field 0=15127
 motion of thin body in, without mag. effects 1=2966
 motions in e. m. field, non-stationary, calc. 3=12135
 moving body, electric potential 2=9121
 moving body in, electron density disturbance, e. m. wave scatt. 1=16581
 moving-body problem, review 0=3448
 moving, e. m. wave reflection, theory 3=12141
 moving, electrical impedance of immersed electrodes 3=21760
 moving, energy transfer with mag. field 2=9686
 moving, nonlinear mag. interaction effects 3=9773
 moving striations, in d. c. discharge, theory 2=19910
 moving striations in microwave discharge 1=18839
 multicharged ion behaviour, in const. elec. field 2=176
 multicharged ion behaviour, in const. elec. field 3=4117
 multicomponent, density fluctuations 1=18820
 multi-component, ionic flow, e. m. disturbances 1=3049
 multicomponent, ohmic heating, theory 3=1966
 multi-component plasma, statistical-mech. treatment 0=12603
 multi-component, single-fluid m.h.d. eqns., Ohm's law 3=21783
 multicomponent, statistical mechanics, dynamics, magnetohydrodynamics 1=16302
 multiple aperture slits for molecular beams 1=4958
 multiply-charged ions, spectral line width and location 4=18845
 multi-quanta recombinations, electron transitions 1=7027
 negative glow, as cathode for electron tubes 0=15068
 negative glow of cold cathode discharge, electron energies 0=9043
 negative radiation temp. at cyclotron resonance 4=18848
 negative radiation temperature at cyclotron resonance 3=9787
 with net charge 2=5334
 neutral atom flux from "Alpha" 1=9609
 neutral atom flux from Alpha, energy meas. 1=9610
 neutral atom flux, measurement 1=9608
 neutral gas density, by fast-ion gauge 2=9594
 neutral system, free energy, statistical theory 1=11710
 neutrino pair emission by hot plasma, calc. 3=7824
 neutron emission in deuterium pinches 1=9589
 neutron energy spectrum, D, cyclotron heated, mag. mirror 3=19913
 nitric oxide, 1-30 atm., 1000-30 000°K; composition density, enthalpy and specific heat 1=10700
 nitrogen, conductivity, thermal and electrical 3=7589
 nitrogen, 1-30 atm., 1000-30 000°K; composition, density, enthalpy and specific heat 1=10700
 noise effects, on Langmuir probe characteristics 2=9598
 noise radiation in cm and mm wavelength range 4=8702
 noise radiation and scattering from cylindrical column 3=383
 noise spectrum of column in longitud. mag. field 3=24285
 noise temperature 2=9596
 noise, theory 2=19947
 non-adiabatic magnetic traps 1=9600
 in nonadiabatic transverse pinch, dynamics 0=1104
 nondissipative, Hamilton's variational principle 3=19234
 non-equilib., cylindrical, noise power radn. 3=4130
 nonequilibrium, density fluctuations 3=13771
 nonequilibrium, interaction of charged particles 4=19045

Plasma—contd

non-isothermal, correlations 3=21767
 nonisothermal, fully ionized, transport phenomena, theory 4=16465
 non-isothermal, kinetics 3=7501
 nonisothermal, magnetogasdynamic equations 4=29913
 non-isothermal, magnetohydrodynamic single-fluid eqns. 2=5337
 non-isothermal, magnetohydrodynamic single fluid eqns. 3=4126
 nonisothermal, no collisions, magnetohydrodynamic eqns. 1=18853
 non-linear effects in electron plasmas 1=9566
 nonlinear effects in inhomogeneous plasma 4=27531
 nonlinear phenomena in alternating e. m. field 1=9565
 nonthermal, electrostatic potential gradients 3=4120
 non-thermal, spectroscopy, problems 3=7504
 non-Maxwellian, uniform, electrostatic instabilities 0=9025
 nonuniform cylinder, cyclotron resonance 4=27528
 nonuniform, radio emission by plasma oscillations 1=10725
 nuclear fusion research, microwave diagnostics 2=19978
 number densities, a. c. and d. c. components, microwave meas. 3=21803
 Nyquist formula, Debye length and microfield 3=7525
 i. r. absorption, in argon jet 2=1459
 ideal, electrical behaviour 0=9028
 ideal, motion of weak discontinuities 0=15128
 impedance of short cylindrical dipole 2=21643
 impulse discharge into hollow cylindrical gas sheath 3=7561
 impulse from exploding wire accelerator 0=7114
 impulsive compression, magnetohydrodynamic effects 0=15039
 impurity atom, life history, calc. 3=21770
 impurity introduction processes 3=12106
 impurity ions, multiply charged, heating 3=24273
 impurity-radiation, from non-Maxwellian spherical plasmas 4=18844
 incompressible, variable acceleration, Taylor instability 3=7531
 induced theta pinch, instability 1=9593
 induction pinch, instability rel. to magneto-acoustic oscillations 1=18886
 induction pinch, instability, rel. to magneto-acoustic oscillations 2=22223
 induction torch, heat transfer 3=21593
 in inert gases, moving striations, successive prod. 0=2335
 inertia-limited zone, stationary soln. 2=22214
 infinitely cond. plasma expanding in mag. field 1=4594
 infinitely conductive, motion in frozen-in mag. fld, Lagrangian and Hamiltonian methods 3=12194
 infrared radiation from shock-wave plasmas 1=15944
 inhomogeneous, absorption of cyclotron waves 2=9573
 inhomogeneous, charge density fluctuations, plasma confinement 0=5309
 inhomogeneous, interaction with electron beam 4=18945
 inhomogeneous, micro-instabilities, with and without diffusion 0=5310
 inhomogeneous, mirror-type microinstabilities 3=1970
 inhomogeneous, scattering and conversion cross sects. 3=499
 inhomogeneous, stability in magnetic field 1=9548
 inhomogeneous, stability in magnetic field 3=12120
 inhomogeneous, in waveguide, e. m. wave propag. 3=7709
 injected into cusped magnetic field, experimental studies 3=12119
 injected magnetic compression 2=5351
 injection, into closed magnetic traps 2=22227
 injection, into cusp mag. field 1=7081
 injection, of H ions 2=13570
 injection machines, potential and energy distrib. 3=1998
 injection into mag. bottle, arc plasma prod. 1=16344
 injection into mag. field of cusped geometry 0=17000
 injection, from pulsed discharge into vacuum 2=3050
 injection from pulsed discharge into vacuum 3=1996
 injection, separation of emission light 3=12175
 injection and trapping in cusped magnetic field 1=10712
 injection, into vacuum, at high density, expt. 2=9575
 instabilities associated with anisotropic velocity distributions 1=9551
 instabilities, critical fluctuation observation 2=11683

Plasma—contd

- instabilities, non-magnetohydrodyn. 2=17824
- instability, with anisotropic ion vel. distrib. 1=7063
- instability, of beam of charged-particles in electron plasma 2=11649
- instability, under charged-beam interaction 2=201
- instability in crossed elec. and mag. fields 3=9776
- instability, electromagnetic 3=7552
- instability at electron gyro magnetic freq. 0=3764
- instability, and gain criteria 2=15918
- instability, with mag. neutral point 3=7516
- instability, nonthermal plasma 3=7586
- instrument for neutral gas density meas. 3=24297
- instability, under charged beam interaction 3=4171
- instability, in uniform mag. field, weak temp. anisotropy 0=19677
- instrumentation 2=7538, 7624
- insulation from wall effects by a hot gas 1=1905
- Ogra, cyclotron and thermal radiations 3=12202
- OGRA, electron loss rate, anomalous 3=21812
- in Ogra, exper. data 2=7632, 8053
- OGRA, fast ion lifetimes 1=9614
- in Ogra, formed by H_2^+ fast ion beam injection 3=12201
- OGRA-type device, critical current for burn-out 1=9613
- "Ogrenok" trap, adiabatic 3=14602
- ohmic heating by condenser discharge 3=7600
- ohmic heating in stellarator, charged particle loss 0=11475
- ohmically heated, electrostatic instabilities 1=9552
- one-component, Debye-Hückel free energy, functional integrals applic. 4=14062
- one-dimensional model, thermodyn. equilib. 2=20111
- one-element, three-component composition, kinetic theory 4=11576
- one-particle distrib. function, kinetic eqns. 4=27510
- one-species, correlations, quantum treatment 4=11565
- optical absorption coeff. 0=10915
- optical refraction meas. with laser beam 4=18882
- optical study, Mach-Zehnder interferometer 3=12183
- optically thick, atomic ion recomb., theory 3=364
- optically thick plasma, non-thermal line radiation 4=18851
- optically thick in red regions 3=16924
- optically-thick; spectral line-shape detm. 3=7578
- optically thin, electron-atomic ion recomb. 2=11620
- optically thin, temp. and density meas., spectroscopic techniques 3=7577
- "Orekh" magnetic temp. behaviour 3=12148
- origin in magnetically driven shock tubes 1=10539
- "over-thermal" elec. field fluctuations, spectroscopic study 0=5311
- P.I.G. reflex generator, pulsed, linear 3=19259
- P.I.G. reflex generator, pulsed, toroidal 3=19260
- p-n junctions, microplasma phenomena 1=11304
- pair correlation 2=7598
- pair distrib. function outside equil. 4=11566
- pair distribution func., in mag. field, cluster integral theory 1=4273
- parallel-plate capacitor, impedance at h.f. 3=24266
- parameter measurement, in mag. field 2=17846
- parameter measurement, oscillographic method 2=19982
- parametric amplifier, use as nonlinear propagating medium 0=15139
- parametric amplifier theory 2=9567
- partially ionized, attractive two-body interactions 2=5332
- partially ionized, equilibrium props. 0=17007
- partially ionized gas, elec. conductivity, electron and ion motions 1=2946
- partially ionized, transport props. in mag. field 4=11588
- particle acceleration, and breakdown, in alternating mag. field 2=7617
- particle acceleration, by hydromagnetic shock wave 2=186
- particle collision cross-sections, meas. 2=22200
- particle collisions in high-temp. plasma 1=4605
- particle diffusion across magnetic field 0=17087
- particle distrib. fluctuations, theory 3=5669
- particle distribution fluctuations, theory 2=7610
- particle and heat fluxes perp. to mag. field, theory 4=5601
- particle loss, in pinched discharge, in axial mag. field 2=197
- particle motion, in axisymm. fields, nonadiabatic 2=19969
- particle motion, in mag. inhomogeneity, adiabatic invariant 1=18988

Plasma—contd

- particle motion in magnetic bottle, computer solution 4=2994
- particle propag. in fully ionized plasma, theory 3=7510
- particle scatt., low-energy, effect of target temp. on diff. cross-section 1=471
- particle, single, kinetic eqn. and dyn. friction 2=11646
- partition function divergence rel. to ionization potential 4=11571
- partition function as integral over phase space 4=11572
- passage of relativistic particle beam, kinetic theory 4=5597
- penetrating, plasma focusing, effect of mag. field 2=182
- penetration into vacuum, boundary meas. with electron beam 4=2988
- Penning discharge, e.s. gradients 1=13088
- Penning discharge, thin sheath near anode 3=7453
- Perhabsatron S-4, energy loss 1=5465
- permittivity, screening ranges and skin-layer depth 0=19678
- perturbation, density, response of drifting plasma 4=18799
- Pharos, compression expt., temp. and density meas. 3=7563
- PHAROS, high-energy magnetic compression experiment 3=12159
- Phillips pulse discharge, spectr. study 2=22181
- phonons and plasmons, electron-ion coupling in metals 1=9994
- photon-electron interaction, phenomenological treatment 1=18918
- photon transport, theory 1=18315
- physically bounded, current density 3=1974
- pinch, azimuthal, radial contraction 3=12143
- pinch, boundary-layer formation 0=10897
- pinch buckling 1=5469
- pinch, Cariddi, orthogonal, obs. 3=12169
- pinch, circuit dynamics 0=16998
- pinch collapse, fully ionized, validity of magnetohydrodynamic approx. 1=2973
- pinch, conductivity of linear discharge 2=9593
- pinch device, for low temp. plasma studies 2=3047
- pinch discharge, alternating, stability 3=12171
- pinch discharge, properties 1=7032
- pinch discharge stabilization 1=307
- pinch, with distrib. current, stability 0=10896
- pinch, dynamics in mag. field 2=15924
- pinch effect, collapsing current sheet 0=9030
- pinch effect, columnar, stability 1=4611
- pinch effect, from Euler-Lagrange eqns. 1=8331
- pinch effect in free molecular stream 1=6656
- pinch effect, hollow, hydromagnetic instability 1=18882
- pinch effect in InSb electron-hole plasma 1=5023
- pinch effect in l.p. Hg arc 1=4583
- pinch effect, linear, hydromagnetic shock waves 1=16336
- pinch effect, linear stabilized, runaway electrons 0=16999
- pinch effect, mechanism 0=5301
- pinch effect, relativistic 1=18879
- pinch effect, review 1=511
- pinch effect in solar flares, rel. to cosmic ray generation 1=18089
- pinch effect, superfast 1=5464
- pinch effect, toroidal, energy loss 1=5465
- pinch effect, tubular, dynamic effects 1=18881
- pinch effect, tubular, with thin current layer, stability 1=4611
- pinch, equilibrium, effect of finite cond. 3=9803
- pinch excitation of ruby laser, Ar pinch 4=8995
- pinch, from exploding wire 2=7588
- pinch expt., stabilized, long linear 3=21801
- pinch in ext. longitudinal mag. field, theory 1=9578
- pinch formation, e.m. diffusion in cylindrical column 1=11944
- pinch, hard-core liquid model, stability 1=18877
- pinch with heat loss to electrodes and by bremsstrahlung, theory 1=9577
- pinch, inductive, radial motion of plasma 2=196
- pinch, initial stages, residual neutral atoms 2=19967
- pinch instabilities 3=21949
- pinch instability, sinusoidal, growth 3=2107
- pinch instability, 0-pinch 1=2974
- pinch, inwardly accelerating, stability 2=11672
- pinch, linear, end effects 3=12170
- pinch, linear fast, theory and expt. 1=16335
- pinch, linear, instabilities, optical obs. 3=5676
- pinch, linear, shock wave, collisionless 3=14586

Plasma—contd

- pinch, linear, stabilized, axial conduction and radiation losses 2=194
 pinch mechanism, linear 1=9586
 pinch, 1-dimensional, current-layer diffusion 3=14587-8
 pinch, orthogonal, meas. 3=12168
 pinch, orthogonal, "quasi relativistic" electron layers 3=14590
 pinch, orthogonal, Schlieren photography 3=7585
 pinch, rotating, axisymmetric stability 3=9797
 pinch, slow, magnetohydrodynamic stability of discharge core 1=10709
 pinch with a small rotation, stability 1=2971
 pinch, in solar flare 2=974
 pinch, stability with anisotropic pressure 3=12144
 pinch, stable dynamic, formation, studies in D,H,A 1=2975
 pinch stability, with anisotropic particle vel. distrib. 1=18885
 pinch, stabilized, with skin effect, collapse phase, theory 1=9579-80
 pinch, sustained and diffuse, time consts. 3=24293
 pinch, θ , coil, with edge effect compensation 3=19264
 pinch, θ , light scattering, using maser, optical, ruby 3=19256
 pinch, θ , neutral gas effects, H 3=19271
 pinch, theta, study using mag. pick-up loops 3=12145
 pinch, theta-type, apparatus, observations 2=1442
 pinch, toroidal, harmonics of Kruskal limit and field diffusion 2=3045
 pinch, toroidal, with a reversed field 2=5348
 pinch tube, Rayleigh-Taylor instability 1=11948
 pinch, tubular, low-pressure, stability 2=11673
 pinch, tubular, stability 3=14593
 pinch, weakly twisted equilib., finite conductivity effect 2=7623
 pinch, z , analogy with cavity co-axial, reson., and TE_{0mn} modes 3=19441
 pinched discharge, particle runaway corrections 0=3775
 pinched gas discharges, H arc initiation 1=16293
 pinched, linear, surface instabilities 0=19655
 pinched viscous, stability 3=7562
 pinches and rings, stabilization, focusing technique 3=24295
 pinches, streak-camera record superposition 3=7584
 pinches, transverse, instability mechanisms 1=1903
 plasma betatron 1=9661
 plasma betatron, self-consistent field theory 1=9601
 plasma bunches in waveguide, behaviour 1=10718
 plasma column in electromag. field, condition for non-central Maxwellian solutions 0=15020
 plasma column in electromag. field, diffusion velocities 0=15021
 plasma column in microwave cavity 1=9571
 plasma-electron beam system, electromag. props. 2=17835
 plasma gun coaxial 3=12197
 plasma guns, dynamics 1=18824
 plasma jet, for high temp. research, review 0=12606
 plasmajets of N, A and He, i.r. spectra 1=11070
 plasma-loaded waveguides, mode coupling 3=9935
 plasma ring experiments 0=7115
 plasma ring gun experiments 1=9612
 plasma thermionic element, theory 0=15067
 plasma torch, induction-coupled 1=7083
 "plasmascopes" 3=12127
 plasmatron, using 600 A argon arc 1=16346
 plasmoid acceleration, electrodynamic method using images 4=16469
 plasmoid acceleration by magnetic field 1=11932
 plasmoid, e.m. field interaction, resonance 3=24290
 plasmoid injection into magnetic trap 1=9590
 plasmoid, Cherenkov energy loss, non-linear theory 4=29922
 plasmoid motion along mag. fields 0=15032
 plasmoid motion in external mag. field, expt. 4=29916
 plasmoid production at plasma res. freq. 0=5324
 plasmoid rotation in theta-pinch 3=5675
 plasmoid source, coaxial, of small aspect ratio 2=19973
 plasmoid sources, conical 3=14567
 plasmoids, from Bostick source, thermocouple meas. 4=2989
 plasmoids, dense, in toroidal mag. field, motion 4=14639
 plasmoids, electrodynamic accelerator 2=9603
 plasmoids, generation and accel. 3=21780

Plasma—contd

- plasmoids, high density, interaction with mag. flds. 4=11605
 plasmoids, microwave probing method 3=24302
 plasmoids, moving in mag. field, stability and containment 3=21784
 plasmoids, in spatially periodic mag. field 3=7547
 plasmoids, stabilization 2=13573
 plasmoids, theory 2=11651
 plasmoids, visual study, rel. to purification 4=18918
 plasmon frequency, dispersion coeff. 3=6501
 plasmons, higher random phase approx. 3=16553
 Poisson-Boltzmann eqn., validity 1=16301
 polarizability, first harmonic, resonance behaviour 4=11623
 poloidal magnetic flux, amplification 1=8334-5
 positive column electron density distrib., microwave meas. 3=4147
 positive column, electron diffusion by temp. gradient 3=12100
 positive column, Hall effect and electron drift vel. 4=29905
 positive column, internal mag. field meas. 4=11673
 positive column in mag. field, abnormal diffusion 1=13072
 positive column, rel. to negative ions 3=7495
 positive column, non-contracted, negative ion effects 3=1971
 positive ion space charge, potential distrib. 0=17046
 positronium formation, ionization, excitation, in H 4=18921
 positronium plasma, Maxwellian solutions 2=15910
 positrons, containment in asymmetric mirror geometry 3=12199
 positrons containment in a mirror machine 0=19654
 potential distrib. in cylindrical r.f. cavity, meas. using ion beam 1=5472
 potential measurements, by ion beam probe 2=9595
 potential probe, using electron time-of-flight 2=11675
 potential troughs, in axial mag. field 0=14985
 power generation, conference 3=21966
 Poynting vector 2=22198
 pre-heating, use of magnetic traps 1=11951
 pre-heating, use of magnetic traps 1=5456
 pressure tensor calc. for fully-ionized plasma 4=5591
 probe, use of atomic spectra 1=10696
 probe characteristics, drifting plasma 3=12180
 probe current step increase with mag. field 0=2331
 probe curves, second deriv. automatic plotting 3=12185
 probe, det. of positive-ion density in ionosphere 2=6942
 probe, electrostatic, in strong mag. field 1=11949
 probe, Langmuir chars., display, circuit 3=14800
 probe, Langmuir, dynamic studies, review 3=1993
 probe, magnetic, coil alignment, mechanical 3=14599
 probe, magnetic, for high-density meas. 3=7583
 probe meas. in dense plasma 1=5471
 probe meas., rel. to diffusion loss 3=7573
 probe meas., exptl. errors 3=24299
 probe meas., penetration of ion sheath 3=24298
 probe measurements, for m.f.p. < probe dimens., at medium pressures 0=19690
 probe, negative characteristic in a magnetic field 3=5634
 probe, piezoelectric, for pressure transients 1=4615
 probe, resonant microwave, for charge density meas. 2=200
 probe, scintillation, for electron energy distrib. 2=1452
 probe theory at medium and low pressures 3=4154
 probes, boundary layer, elec. field 0=15035
 probes, electrostatic 2=7626, 19983
 probes, Langmuir, theory 0=15036
 probes, microwave, for oscillations detection 2=1466
 probes, with non-uniform work function, theory 3=7572
 probes on space vehicles, rel. to ionospheric meas. 3=7571
 probes, spherical, electron collection, theory 2=1445
 produced by button-type source, mag. field behaviour 3=9777
 production by collision of shock waves 4=18829
 prod. in detonations in air 0=12457
 production by e.m. driven shock waves, review 3=7684
 production by neutral-atom injection, eqns. and numerical solns. 3=1964
 production with 10^{10} W laser pulses 4=24628
 prod. by travelling resonant mag. field 1=16332
 propagation phenomena, linear and nonlinear 4=16631
 propagation, through dispersionless dielectric 0=9205

Plasma—contd

propulsion by means of travelling sinusoidal magnetic field 1=16338
 propulsion from pinch collapse 1=16337
 propulsion by rapidly varying field 0=15034
 puff expansion in longitudinal magnetic field 4=18800
 pulse conduction in decaying plasma 1=8327
 pulse discharge, high-pressure diam. meas. 2=11641
 pulsed accelerator, partition of energy 0=12609
 pulsed reflex discharge, equilibrium mechanism 3=4041
 pulsed reflex discharge, P.I.G. type, high-density 3=4042
 pure, high-temperature, in quasi-stationary systems, production 3=12106
 pyrotron, electron energy distrib., scintillator probe 2=1452
 quantum, diamag. suscept. for arb. disturbances 3=19231
 quantum, dielec. tensor theory 4=16496
 quantum, h.f. e.m. absorpt. in mag. field 3=14580
 quantum, kinetic theory 2=19459
 quantum mechanical kinetic equation 4=2587
 quantum plasma, theory 4=5085
 quantum, quasilinear eqns. 4=8676
 quantum, transport coeffs., Green function method 3=21759
 quasineutral, entropy gradient rel. to vorticity 4=27516
 quasineutral, potential eqns., rel. to Crocco's theorem 4=27517
 r.f. emission spectrum by dielec. const. approach 4=18866
 r.f.-force devices, high impedance, theory 2=19989
 r.f. probe, resonance phenomena, theory 3=21806
 r.f. propag. in uniform mag. field 3=4133
 r.f. reflectance, from sheath 2=5486
 r.f., Schlieren photography 3=4146
 r.f. wave emission 1=10783
 radial, in axial mag. field 0=7211
 in radial discharge tube, effect of mag. field, transverse 4=24645
 radial distrib. in positive column in mag. fld. 3=19240
 radially constricted between electrodes, stability criterion 1=18782
 radiation, admixture interaction effects, thermal excitation 3=24269
 radiation by charge moving near cyclotron resonance 3=19255
 radiation, coherent and incoherent 0=9047
 radiation, of currents passing through plasma boundary 2=11662
 radiation, cyclotron emission from non-Maxwellian distrib. 1=8323
 radiation damping theory for const. mag. field 4=5756
 radiation emission and absorption, general theory 4=24649
 radiation emission and absorption near plasma frequency 4=18850
 radiation field and Q of resonant cylindrical column 1=10698
 radiation of high-temp. collision-dominated plasmas 3=7506
 radiation by impurities, hot rarefield 3=12137
 radiation, incoherent, microwave, theory 0=2370
 radiation intensities, automatic transform. into radial distrib. by data processing system 4=11608
 radiation from ions in nonisothermal plasma in mag. field 4=14656
 and radiation, kinetic eqns. 0=9046
 radiation, l.f., by ions and electrons in mag. fld. 3=16938
 radiation laser, emission and pumping, review 3=22007
 radiation law, non-Maxwellian distrib. 2=7596
 radiation from line source 3=7601
 radiation losses, from impurities in hot plasma 2=22206
 radiation losses in pinch experiments 4=8698
 radiation magnetogasdynamics, plane couette flow 4=18816
 radiation, microwave, incoherent, in a mag. field, calc. 1=7075
 radiation, microwave, from non-Maxwell plasma 3=5657
 radiator in, near-zone elec. field, with external mag. field 2=1453
 radiation, noise, microwave spectroscopy 4=21505
 radiation, non thermal, from impurity atoms 4=14653
 radiation, nonthermal impurity, from spherical plasma 3=7605
 radiation of a PRK-4 lamp in far i.r. 4=24650
 radiation and particle loss in hydrogen-plasma 0=15024

Plasma—contd

radiation scatt., incoherent, effect of Coulomb collisions 4=11632
 radiation scatt., incoherent, quantum electrodynamics 4=11631
 radiation temp., Kirchhoff's law, non-Maxwellian distrib. 1=2959
 radiation temperature in mag. field, r.f. meas. 3=4121
 radiation temperature, microwave meas. 1=2978
 radiation theory, continuum, equivalent sources 2=11663
 radiation theory, refl. at metal boundaries 2=11664
 radiation transfer, with electron collisions, semi-infinite 3=513
 radiation, transverse e.m. waves, from super-thermal electrons 4=18862
 radiation from uniformly moving charge, theory 4=8709
 radiation, vacuum, u.v., after mag. compression 3=7505
 radiative heat transfer, by bremsstrahlung, opacity depend. 1=7052
 radiative transfer, resonance lines, Doppler-broadened 3=9813
 radiative transfer, without thermal equil. 3=14562
 radio emission, from plasma shock waves 2=20137
 radio frequency slow mode propag. 3=12134
 rapid compression with axial currents 0=5307
 rare gas, cylindrical, pulsed, confinement 3=7558
 rarefied, gap flows, classification 2=7609
 rarefied, high-temp., convection instability and stabilization effect 3=1979
 rarefied, in mag. field, Boltzmann eqn. 1=7062
 rarefied, magnetohydrodynamic waves, damping by "near" collisions 2=1433
 rarefied, magnetosonic waves 1=13086
 rarefied, resonance impurity radiation 4=18859
 rarefied, shock-wave front fine-structure 2=15917
 rarefied, with short-range and Coulomb forces, free energy 1=13078
 rarefied, in strong mag. field, instability 1=16328
 Rayleigh-Taylor instability 2=19952
 recombination meas. by Langmuir probes 4=2950
 recombination radiation in diffuse decay in mag. field 4=24651
 in rect. waveguide, e.m. wave propag. 0=303
 re-entry vehicles, sheath, microwave study 2=4880
 reflection of e.m. waves by moving plasma 1=5455
 reflection of e.m. waves by moving plasma 1=11928
 reflection of e.m. waves in slow-wave waveguides 0=5410
 refraction, microwave, cylinder, parabolic density profile 3=12140
 refractive index, by laser phase measurement 4=2985
 refractive index, wavelength dependence 1=5473
 relations with astrophysics 1=5150
 relativistic beam passing through, small amplitude motion 0=17003-4
 relativistic charged particle, motion, in discharge mag. field 0=10982
 relativistic, cyclotron and aperiodic instabilities 2=13561
 relativistic, cyclotron and aperiodic instabilities 3=5659
 relativistic, cyclotron emission and optical props. 1=9556
 relativistic, dielec. props., e.m. wave propag. 1=7054
 relativistic, e.m. wave reflection and absorption 2=1424, 22216
 relativistic electron beam, motion analysis 0=9083
 relativistic, electron dynamics and mag. field reversal 2=13562
 relativistic flow, stationary, in mag. field 4=16475
 relativistic kinetic eqn. 0=12614
 relativistic, one-particle distrib. function 2=17851
 relativistic, polyliquid hydrodynamic eqns., with radial particle braking 4=18107
 relativistic, in variable fields 1=13076
 relativistic virial theorem 3=24291
 relaxation distance, det. 2=1449
 relaxation phenomena 3=21757
 relaxation phenomena, unified theory 3=21758
 relaxation, thermal, in one-species one-dimensional plasma 4=14629
 relaxation, unified theory, general collision terms 4=27507
 relaxations, unified theory, quantum effects 4=11579
 relaxations, unified theory for 2-component plasma 4=494
 relaxation in weakly turbulent plasma, theory 4=14627

Plasma—contd

- research, review 1=287
 resistance, effect of electrodeless regions 4=8674
 resistance, variable, for generation, up to 400 A d.c. 3=9694
 resonance, correlation between extinction bands of solids 0=7876
 resonance field distrib., hysteresis and nonlinear effects 4=5607
 resonance lines, Doppler broadened, radiative transfer 4=21504
 resonance plasma and electron density meas. 3=19251
 resonance processes in magnetic traps 1=9615
 resonance rectification meas. using probe 3=21805
 resonance study, rel. to freq. and diam. 3=7611
 resonant behaviour, hollow, cylindrical plasma 3=9771
 resonant behaviour, plasma slab 2=17836
 resonator, eigenfrequ. and damping eval. 3=9807
 "restoring" boundary between plasma and mag. field 1=5444
 "restoring" boundary between plasma and mag. field 1=8329
 review 2=5327, 19931
 review, fusion problem and instabilities 2=22197
 review of plasma physics 4=2970
 review of present research 4=21493
 review of recent work at Conference, Salzburg, Sept. 1961 3=384
 review of u.h.f. investigation methods 1=9559
 ring configuration, contraction to ball, residual flux 1=7060
 ring configuration, in e.m. field electrodeless discharge theory 1=7047
 ring configuration, equilibrium 1=7039
 ring configuration, of finite conductivity, drift compensation 0=19675
 ring configurations, long-wave instabilities, dynamic stabilization 0=19673
 ring current, stability 1=7049
 in ring discharge, electrodeless, pulsed, with mag. bias flds. 3=7499
 ring discharge, pulsed electrodeless 2=11676
 ring-shaped conductor, in mag. field, stability 0=19674
 ring-shaped configuration, stability, in mag. field 1=4614
 ring-shaped, in mag. field, stability 0=15015
 ring stability, with non-uniform current distrib. 2=17830, 19946
 ring stability, rel. to disturbances independ. of azimuth 2=9580
 rings, electrodeless generation, accel. 2=3053
 rocket exhaust, e. m. props., effect of solid particles 4=10933
 rockets, hypersonic, ionized shock layer 2=4878
 rotating, acceleration in axially-symmetrical channels 4=27518
 rotating, confined, momentum balance 3=9798
 rotating cylindrical config., stability 3=14571
 rotating cylindrical layer in crossed field 4=503
 rotating, elec. and mag. field distrib. 4=18797
 rotating, high-temp., eqns. for drift and currents in cylindrical geometry 1=9563-4
 rotating, homopolar type, instabilities 3=21732
 rotating, hydromagnetic props. 2=1455
 rotating, Ixion III, energy and velocity limiting effect 2=1456
 rotating, limiting velocity 1=16329
 rotating machine, constant burning voltage, for various I and p 1=2980
 in rotating magnetic field, nonrelativistic motion 2=180
 rotating, magnetic mirror containment 0=5315
 rotating magnetic polarization 0=7112
 rotating partly ionized, interaction with neutral gas 3=12118
 rotating pinch, stability 1=2972
 rotating, production in Homopolar V 3=4157
 rotating, quasi-stationary conditions, mag. fields 2=15915
 rotating, in thermo-nuclear device 0=15126
 rotating, voltage characteristics 1=18825
 rotation, between 2 coaxial cylindrical conductors 0=9171
 rotation in crossed fields, effect of Hall current 4=18802
 rotation in crossed fields, effect of ion wind 4=18801
 rotation, in mag. field parallel to symmetry axis, at low press. 1=265

Plasma—contd

- rotation, nonstationary, in mag. field 2=181
 rotation produced by electrodeless gun 3=9799
 rotation-symmetric flow, magnetogasdynamics 2=1574
 rotation, in theta-pinches 2=13572, 19968
 runaway electrons in weak elec. field, theory 1=18830
 runaway process, transport theory 1=15724
 runaway and suprathermal particles 1=9562
 Saha eqn. for ion densities, generalization 1=10666
 satellite sheath, effect on aerial breakdown 2=4884
 satellite sheath cross-section change 2=4879
 satellite sheath, re-entry, radio interference 2=4883
 scaling laws, 10 dimensionless parameters, Π -theorem method 1=3048
 scatt. theory, mag. induced anisotropy and inhomogeneity 3=393
 scattering of e.m. waves 1=16314
 scattering of e.m. waves by bounded plasma 3=9790
 scattering, e.m. waves, peaks, minor, microwaves, and e density meas. 3=19254
 scattering, electromag. waves, including collisions, calc. 3=16942
 scattering of plane waves, by plasma sphere, Mie theory 4=5659
 scattering pot., calc. 0=2363
 scattering of radiation 0=19684
 scattering of radiowaves, incoherent 0=19931
 Sceptre IIIA, electron temp. ($\sim 10^6$ deg K) 0=8857
 Sceptre III deuterium discharge, proton energies 1=9619
 Sceptre III, N V emission spectrum 1=13945
 Sceptre IV discharge fluctuations 1=11954
 Sceptre pinch, periodic mag. field fluctuations 0=19636
 screw instability of plasma column 1=13080
 Scylla expt., effect of preionization and initial mag. conditions 1=10721
 Scylla expt., X-ray continua and line spectra 1=8820
 Scylla magnetic compression experiment, stability and heating studies 3=12206
 Scylla I theta-pinch, X-ray spectrum 15-25A 3=24296
 seeded flame, elec. conductivity, in strong elec. fields 3=19241
 seeded, gas-phase and surface phenomena 4=18814
 self-constructed, theory, new data 3=12157
 self-gravitating, stability, with and without mag. field 2=11657
 semicond., oscillator phenomena 3=2879
 semiconducting, non-linear effects, dispersion theory 3=10744
 semiconductor, growing helical density waves 3=8504
 semiconductor, pinched, moving, Doppler effect, e.m. waves 3=17827
 in semiconductors, helical instabilities, calc. 3=13051
 sheath, around re-entry vehicle, telemetry effects 2=4885
 sheath coating cylinder, plane wave scatt. 3=7703
 sheath formation, Bohm's criterion application 1=9576
 sheath, formation, ion current limits 2=13558
 sheath, Harrison-Thompson condition 2=19939
 sheath round metal sheet, d. c., r. f. potential meas. 4=5626
 sheath, separation regions of oppositely-directed mag. field 2=7618
 sheath study with electron-beam probe 3=7574
 sheath, transition in l.p. arcs 2=1410
 sheath transition in magnetic field 1=5454
 sheaths, one-dimensional, distrib. calc. 3=406
 sheet, e.m. wave propagation 1=376
 sheet, and elec. or mag. dipole, as e.m. wave source 1=16550
 "sheet," one-dim., elec. field statistics 3=11713
 sheet pinch, finite-resistivity instabilities 3=12177
 shock blast wave of electron gas in neutral plasma 4=27526
 shock, mag. flux transport 4=29918
 shock prod., e.m., non-reproducible 4=16476
 shock structure, diffusion effects 0=10905
 shock structure, diffusion effects 2=3033
 shock structure in longitudinal mag. field 1=9567
 shock tube, discharge between coaxial cylinders, velo. meas. 3=14252
 in shock tube, e. m., prod. by shock, small amount 4=5289
 in shock tube, microwave study 1=289
 shock-tube wave phenomenon, fast dynamical 3=1955

Plasma—contd

shock tubes, ionization, origin 1=18460
 shock velo. radial var. in cylindrical geometry 4=24647
 shock-wave acceleration 2=9587
 shock-wave conditions, discontinuous flow 4=14649
 shock wave crossing mag. field, charge separation effects 4=19026
 shock-wave front moving across mag. field, stability of structure 4=8697
 shock wave front struct., numerical integration 4=18840
 shock wave struct., inclined to mag. field 4=11607
 shock wave struct. in mag. field 4=18838-9
 shock wave struct., no mag. field, ion and electron gas model 4=27525
 shock waves, behaviour 2=13358
 shock waves, collisionless 1=18841
 shock waves, collisionless, in mag. field 4=5609
 shock wave, collisionless, in weak mag. field 3=12132
 shock wave propag. in unpinch geom. 3=1991
 shock wave and solitary wave structure 0=17021
 shock-wave structure, bimodal distrib. 3=21489
 shock waves, without collisions, laminar theory 4=18833
 shock waves, converging cylindrical, front struct. 4=18841
 shock waves, cylindrical, from explosion 4=27524
 shock waves, e.m. driven, radiative attenuation 3=1758
 shock waves, 4 theorems for possible flows 4=2978
 shock waves, in high-temp. dense plasma 2=7601
 shock waves in high temp. dense plasma 3=5661
 shock waves, low density, compress. and heating, models 4=27523
 shock waves, stiffening and freezing-in, for elec. discharge in liquid 4=5287
 shock waves, strong, similarity solution 3=7542
 shock waves, strong, in transverse mag. field 3=7541
 shock waves, structure 0=11034
 shock waves in, structure, for collisional dissipation and electron beam instability 4=18837
 shock waves, two-fluid model 3=1973
 shock waves, weak, structure 3=1980
 shock waves, weak, structure, theory 2=5344
 shread (plasmoid) formation in mag. fld 3=7524
 similarity between phenomena in electron beams and plasmas 4=16534
 single-component, h. f. elec. cond., correl. effects 4=5599
 slabs of plasma, as e.m. waveguide 2=13685
 slow waves, dispersion 3=5850
 slowly decaying, microwave analysis 0=5295
 slowly decaying, Schmdts virial theorem 1=9544
 solar, contraction, rel. to flare generation 1=18092
 solar corona, sporadic radio-emission, noncoherent mechanism 2=1007
 solar, expanding, e.m. props. 2=17238
 solar flare cloud, internal structure 2=13099
 solar flares, plasma ejection 2=12053
 solar, interaction with geomag. field 0=21316
 solar, interaction with terrestrial magnetic field 1=15358
 solar, Mariner II expt. 3=7028
 solar, mixing with earth's magnetic field in van Allen zone 1=11652
 solar prominence and corona formation theory 0=6592
 solar spicules, solar outer atmosphere heating 0=18762
 solar, streaming through geomag. field 2=12054
 solar supercorona clouds, radio observation 2=1005
 in solar system 0=10487
 solid, polarization rot. by drift current 4=20253
 solid-state, collective behaviour, theory 1=19847
 solid-state, transverse instabilities under steady elec. and mag. fields 3=25258
 solid-state waveguide in transverse mag. field 4=27656
 solid-state waveguide in transverse mag. field, theory 4=27657
 solids, acoustic wave amplification, u.s. 3=22633
 in solids, rel. to characteristic electron-energy losses 1=6100
 solids, valence electrons interaction with fast electrons 4=12712
 source, for high-vacuum 2=17847
 source interaction with uniform magnetic field 4=18820
 sources, hydrogenous, highly ionized, design and construction, 3=24306
 sources, survey 0=19769

Plasma—contd

space charge sheath, elec. field 3=12113
 space-charge wave propag. const. rel. to hydrostatic pressure 3=398
 space-charge waves, collision damping 0=3771
 space charge waves, collision damping, calc. 3=5666
 space charges, macroscopic, prod. and distrib. 2=19933
 space dispersive props. 1=10695
 space distrib. of electrons, e.m. wave reflection method 1=293
 space vehicle propulsion 2=7045
 space vehicles, sheath, conference 2=2576
 spark discharge, shock wave propagation 1=18786
 spark discharges, shock wave propagation, theory 1=18785
 spark, thermodyn. balance and composition det. 2=11645
 spatially homogeneous, Bogoliubov's eqn. 0=15018
 spatially inhomogeneous, microscopic instabilities, kinetic examination 3=12125
 spectra, asymmetric self-reversible line profile 4=11610
 spectra from highly ionized atoms, grazing incidence meas. 4=25490
 spectra, two types of atoms 3=9812
 spectral broadening, due to r^{-3} potential 4=18861
 spectral cinematographical methods, development 3=7327
 spectral line broadening, statist. theory 4=14650
 spectral line form, rel. to self-reversing line contours 2=7364
 spectral line intensities, optically thin approx. criteria 4=18852
 spectral line profiles, functional description 0=3626
 spectral line self-absorption, extension of limits of applicability 3=19282
 spectrochemical analysis. 3=25841
 spectroscopic investigation, electron-optical system 2=19981
 spectroscopic investigation, under fast mag. compression 2=11639
 spectroscopic investigation methods 1=10699
 spectroscopic investigation methods 1=11952
 spectroscopic light source, impurity free, 250 cm long 4=13752
 spectroscopic meas. of temp. and density 3=9806
 spectroscopic methods of determining temperatures 0=19687
 spectroscopic study 0=19686
 spectroscopy, high-density corrections 3=1961
 spectroscopy, time-resolved 2=1451
 spectrum, Al III broadening and shift 4=18846
 spectrum, forbidden He line 2=1416
 Spitzer's equations, suggested modifications 2=1430
 stability, against ribbon-type perturb., in mag. field 1=7046
 stability and boundary conditions 0=15016
 stability of boundary with vacuum 1=18838
 stability of bunches in waveguide 1=18883
 stability calculations, fundamental error 0=12611
 stability, of column in longitud. mag. field 2=19941
 stability, with continuous density distrib. 1=13090
 stability criteria, Lyapunov 3=12117
 stability in current-carrying plasma 1=11942
 stability of cylinder in h.f. mag. fields 1=4613
 stability, effect of Coulomb scattering 1=18849
 stability, electrostatic, of non-Maxwellian plasma 2=13560
 stability, under electrostatic perturbation 1=18875
 stability in field of mag. dipole 0=19676
 stability, with frozen-in nonuniform mag. field 3=7515
 stability, gravitational, effect of finite resistivity 3=21778
 stability of higher order correl. functions, elec. and mag. field vars. 4=21533
 stability, hydromag., rel. to mag. surfaces 3=1975
 stability, hydromagnetic, effect of inertia term 2=19950
 stability in inhomogeneous mag. field 2=9579, 19964
 stability in inverse pinch discharge 3=1992
 stability in longitud. mag. field and with conducting casing 1=9581
 stability, low pres. plasma, no mag. surfaces 3=14594
 stability, at low pressures, in toroidal systems 0=7124
 stability, in mag. dipole field 1=5458
 stability, in mag. field, inhomog. plasma 3=24314
 stability, in mag. field, rarefied l.p. plasma 3=24313
 stability, rel. to near-by equilibria 3=12131
 stability, "normal mode" method 2=15911

Plasma—contd

stability of plasma with anisotropic particle-velocity distrib. 1=4602
 stability of plasma boundary in magnetic fields 1=10711
 stability, potl. energy in mag. field 3=14596
 stability, review 2=11644
 stability, of sharp pinch and unpinch 2=1440
 stability of toroidal system 1=7078
 stability, in travelling wave, effect of mag. field 2=11674
 stability, in vacuum, many-valued scalar mag. potl. 0=17012
 stabilization, dynamic, passing current, effect of mag. field 3=7513
 stabilization, using guard conductors 1=7065
 stabilization of "universal" instability in weakly non-uniform plasma bounded by a mag. field 3=14595
 stable and confined 2=5352
 stable confinement 0=7122
 stable, in discharge of inverse-pinch type 3=21765
 stagnation-point Langmuir probe 0=9038
 Stark broadening of H-like ion spectral lines, calc. 1=8809
 Stark broadening of H spectral lines, calc. 0=1480
 Stark broadening of heavy-element isolated spectral lines 3=701
 Stark broadening, of neutral He lines, calc. 2=3698
 Stark broadening of spectral lines 0=1479
 Stark profiles, of H and He 2=3700
 static equilibrium stability 2=11671
 stationary configurations in mag. fld. 4=491
 stationary cylindrical configuration, in long. and self mag. field, e-e interaction 1=296
 stationary, diffusion in mag. field 3=12123
 stationary flow, in mag. field, finite amplitude wave 3=24280
 stationary state, low pressure, in ambipolarelectric field 4=5590
 stationary state, in self-consistent mag. field 2=22209
 stationary state, in self-consistent magnetic field 1=18837
 stationary states, kinetic approx. 2=22215
 statistical line broadening 2=1958
 statistical mechanical invest. 4=77
 statistical mechanics, Boltzmann and Jökker-Planck eqns., review 0=12604
 statistical mechanics, Mayer expansion 1=5203
 statistical thermodynamics 1=18815
 steady-state, highly-ionized, prod. device 3=7593
 steady states of high temp. plasma, theory 4=8684
 steady-state processes, non-linear theory 0=7128
 steady-state, quiescent, highly-ionized, generation and meas. 1=8324
 stellar plasma 0=2361
 stellerator, charged-particle loss during ionization 1=2979
 in Stellarator, deviations from kinetic equil. 2=1454
 stellarator, interchange instability 3=19284
 stellarator, loss of charged particles 3=12153
 in Stellarator, mag. field calc. 2=17849
 stellarator, Model C, containment time 3=12190
 in Stellarator, r.f. heating and vacuum system 2=19987
 in Stellarator, rotational transforms 2=13576
 stellarator S-1, with helical magnetic fields 3=19283
 Stellarator synchrotron radiation from runaway electrons 1=9620
 stellarator-type devices, magnetic confinement 0=19661
 stopping power for a charged particle, effects of ionic collective motions 1=2968
 stopping power for fast charged particle 3=12103
 stopping power on moving particle, calc. 4=5081
 stopping power, quantum statistics 2=4958
 stratification waves, physical mechanism 3=9735
 stratified, as model of ionosphere for e.m. wave reflection 3=16256
 stream interaction with dipole, cavity production, rel. to radiation belt meas. 4=4796
 stream production, from $(\text{CN})_2\text{-O}_2$ flames 2=3036
 streams interacts, in transverse mag. field 4=29917
 streams, three dim.-less parameters 3=12244
 streaming cylindrical incompressible, hydromagnetic stability 0=9035
 streaming in inhomogeneous mag. field 4=21502
 streaming, in line-current mag. field, interactions 1=3047

Plasma—contd

streaming, low density, at magnetic barrier 1=4596
 streaming through magnetic dipole field 3=16935
 streaming plasma, interaction with magnetic dipole field 1=10705
 in strong mag. field, energy principles for equilibrium and stability 1=15721
 strongly ionized, charged particle distrib. function, spherical harmonic technique 4=11508
 strongly ionized, in hollow cathode discharge 3=21773
 strongly ionized, production with pinch effect in cusped field 0=19672
 sun, flares, electron density, from cosmic ray proton interactions 3=11546
 and sun, spectra, u.v., identification with θ -pinch and Zeta discharge 4=29439
 superbarrier reflection 2=226
 superbarrier reflection 3=4210
 superfast pinch experiment 1=310
 superkinetic eqn. for spatially inhomog. plasmas 4=11564
 super high frequency probe method for charge conc. 0=15028
 in supernovae outbursts, theory 4=2367
 supersonic flow fields in r.f. excited plasma tunnel 3=24305
 supersonic streams, seeded with electronegative gases, props. 4=16468
 surface boundary conditions, for rapidly changing parameters 4=29903
 surface properties, microwave cavity meas. 2=1444
 survey of experimental studies, optical methods 1=9554
 survey of experimental studies, probe methods 1=9555
 survey of 1958 Geneva papers on high temp. plasmas 0=19665
 swirl, due to Hall effect, theory 4=29914
 synchrotron radiation, ang. depend. 1=4609
 synchrotron radiation avoidance by confinement geometry 0=16997
 synchrotron radiation losses 2=19943
 synthesized, space charge instabilities 1=3007
 TA 2000 torus, impurity ion far u.v. emission 3=5680
 tangential burst, stability 2=5336
 teaching, bibliography 2=9562
 temp., meas. by double probe in mag. field 1=8324
 temp. variations during self-heating by D and T thermo-nuclear reactions 0=3759
 temperature, rel. to current electron conc. 4=16459
 temperature distrib. between particles for partial ioniz. 3=24267
 temperature, effect of electrostatic instabilities 2=11668
 temperature equalization rate 3=14604
 temperature measurement, det. from e.m. wave phase velocity 2=19977
 temperature measurement, by determ. of particle velocities 2=5356
 temperature, second maximum due to admixture interaction 3=24269
 ternary (electrons, ions, neutral atoms), magnetohydrodynamics 0=15038
 test particle model 4=24629
 test particle, return to equilibrium 1=8321
 theoretical and experimental studies at A.E.I., U.S.S.R. 1=9575
 theory applied to many-electron atom 2=3683
 theory of fully ionized column with external particle prod. 3=9768
 theory, meas. and expt., review 2=15907
 theory, operational methods appl. 4=16463
 thermal agitation and turbulence 2=2678
 thermal arc, use as known radiation source 3=10447
 thermal conductivity 4=18807
 thermal conductivity, calc. 1=5443
 thermal conductivity, Chapman-Enskog method 2=5329
 thermal conductivity, eqn. 2=1417
 thermal conductivity tensor 0=1127
 in thermal converter diodes, kinetic theory 2=11707
 thermal, dynamical eqns. and transport relationships 1=5450
 thermal, electric discharges, dynamic props., theory 4=8665
 thermal fluctuation theory 4=29902
 thermal isolation, mag. field topology 2=22226
 thermal radio radiation 3=12133
 thermalization 2=9578

Plasma—contd

thermalization of fast injected ions 1=11927
 thermally luminous, transition probability 2=178
 thermionic converter plasma diode potential distributions 1=1911
 thermionic converter, resistance 3=4155
 thermionic generator with ion injection 3=7421
 thermocouples, efficiency 0=9040
 thermocouples, open-circuit voltages 0=2311
 thermocouples, for 1600-2600°K hot-junction temp. 0=1139
 thermodynamic functions, det. theory 2=5330
 thermodynamic functions of low-temp. plasma 1=4590
 thermodynamic props. of partially degenerate fully ionized gas 1=9340
 thermodynamic props. of unipositive gaseous elemental ions 100-50 000°C, calc. 0=14972
 thermoelectric power meas., low temp. 3=19277
 thermonuclear, cross-sections and rates of various reactions 0=17638
 and thermonuclear fusion, conference report 2=5326
 thermonuclear, heating of positive ions, by electron beam 0=15027
 thermonuclear, ion injection into magnetic mirror 0=3762
 thermonuclear, mass analysis of neutral flux 3=24996
 thermonuclear processes 0=5836
 thermonuclear reactions, controlled, Harwell work since 1958 3=7597
 and thermonuclear reactions, investigations at U.S.S.R. Academy of Sciences 1=5439
 and thermonuclear reactions, investigations at U.S.S.R. Academy of Sciences 1=13077
 theta discharge, equilibrium config. 1=18876
 θ pinch, added hexapole mag. flds and preionization effects 3=19266
 theta-pinch configs., wall-stabilization effects 3=21798
 theta pinch, conical, azimuthal mag. field 3=21797
 θ pinch, containment 3=19265
 theta pinch, electron density and mag. field distribs. 3=12178
 theta-pinch end loss 1=10720
 theta-pinch, fast 3=12160
 theta pinch, hard X-rays emission before breakdown 3=12179
 theta pinch, mag. fld. diffusion thru initial stages 3=7565
 Θ pinch, neutron prod. without reversed trapped field 3=4144
 theta pinch, rotational instability 3=21799
 "theta" pinch, wedge-type instability 1=18878
 θ pinches, ionization rates and impurity radiation losses 4=18958
 thetatron, reversed field heating, calc. 3=413
 thin, ion and electron currents 0=15010
 thin, of variable density, properties 0=15007
 three-component, energy dissipation, mag. field depend. 3=21783
 three-component system, transport properties 3=16928
 three-component, transport eqns. in mag. field 4=16471
 time for thermodynamic equilibrium in arc discharge 0=3749
 time variation in fusion systems, energy balance 0=17637
 "Tokamak 2" apparatus, X-ray detection 1=1901
 "Tokamak" toroidal apparatus, second version 1=5462
 torch discharge, high frequency, heat losses 0=5299
 torch, induction-type, for growth of refractory crystals 2=2365
 toroid, with distrib. current, in mag. field, stability 0=10910
 toroidal apparatus, field error elimination 3=21814
 toroidal arc, confinement 1=11945
 toroidal β device, electron spectrum, and O emission min. 3=21817
 toroidal column, equil. in mag. field 4=493
 toroidal configuration, in changing long. mag. field 1=5463
 toroidal, with conducting aperture limiter, equilibrium 4=536
 toroidal current-carrying, equilb. 3=19268
 toroidal discharge, excited by travelling e.m. field, instability 2=9584
 toroidal discharge excited by travelling e.m. fld., instability 3=5670
 toroidal discharge in H_2 , Joule heat losses 1=5474
 toroidal discharge in H_2 , Joule heat losses 1=11950

Plasma—contd

toroidal discharge, He II line profile 2=7620
 toroidal discharge with rapid programming 3=19247
 toroidal discharge, in rapidly changing longit. mag. field 1=309
 toroidal discharge in strong mag. field 0=9029
 toroidal discharge in varying longitudinal mag. fld. 3=12208
 toroidal, equilibrium configurations 1=9588
 toroidal fast-compression, rotational transforms, using shaped single-turn coil 2=19970
 toroidal, heating, in oscill. mag. field 0=1136
 toroidal, m.h.d. stability, energy integral 3=21775
 toroidal magnetohydrodynamic stability 3=16949
 toroidal metal tubes, disturbing mag. fields at gaps 3=21813
 toroidal pinch discharge, mag. field, temp variations 3=5637
 toroidal pinch, equilibria, particle model 1=4610
 toroidal pinch expts., rel. to ignitrons 3=4143
 toroidal pinched discharge, energy loss 2=1441
 toroidal, spectra min. at peak current, electron temp. var. 4=18865
 toroidal, stability 3=12130
 toroidal stabilized pinch, review 0=19660
 toroidal, striking voltage var. with freq. 4=5587
 in toroidal surface, equilibrium 1=19000
 toroidal systems under scalar pressure, stability 1=18992
 torque on plasma, in terms of mag. stress 2=19949
 torus, elliptical, equilibrium, magnetohydrodynamic 3=19258
 in a torus, magnetohydrostatic equilibrium 1=308
 torus with surface currents, stability calc. 3=1976
 Torus TA2000, ionization 3=7595
 transformer, ohmic heating 2=19831
 transient pinch, similarity solns. 3=19233
 transition radiation fields calc. for electron refl. 4=29921
 transition radiation rel. to temp. 1=18836
 transition radiation, rel. to temp. 2=22207
 transition region to confining mag. field, analysis 2=1437
 transition region structure, self-consistent microscopic eqns. 1=18833
 transport coefficients, correlation effects 2=1417
 transport coefficients for fully ionized plasma 3=7508
 transport coefficients, in magnetic field 1=11930
 transport coeffs. 1=18821
 transport coeffs. det. by Grad method 3=14568
 transport and containment, in high-freq. and magnetic wave-guides 3=12174
 transport cross-sections for cut-off Coulomb potential 4=14632
 transport eqns. in strong external field 1=16310
 transport equation 1=5449
 transport equations, relativistic, wave dispersion eqns. 0=9031
 transport phenomena, radiation process effects 3=14583
 transport phenomena, variations 2=13556
 transport processes, in mag. fields, 2nd order theory 0=2368
 transport processes, unified theory calc. 4=498
 transport processes in fully ionized plasma 1=4599
 transport properties, macroscopic, alkali-metal plasma 4=11593
 transport properties in strong magnetic field 1=8325
 transport props., effect of neutral particles 1=18822
 transport props., radially constricted 3=16926
 transport theory, runaway process 1=15724
 transverse compression waves in stabilized discharge 0=3769
 transverse motion in magnetic fields 3=12127
 trapping, in cusp configurations, for high and low β -injection 0=9026
 trapping instabilities in slight inhomog. plasma 3=1988
 trapping in radially increasing magnetic field 3=12149
 in travelling-wave excited discharge, radial electron density 2=22188
 travelling wave interaction in plasmas 1=9568
 in tube, effect on e.m. waves in helical waveguide 0=17110
 turbulence 1=5451
 turbulence 3=7523
 turbulence in incompressible flow, characteristic functional 1=16327
 turbulence, in mag. mirror system 1=18874

Plasma—contd

- turbulence in r.f. discharge 3=7470
 turbulent, elec. conductivity 3=1963
 turbulent, electrodynamic props. 3=16932
 turbulent, energy spectrum of charged particles compared with neutral 4=8672
 turbulent heating by e.m. wave absorption 3=1987
 turbulent, interaction with charged particles 4=21503
 turbulent particle loss, in strong mag. flds. 2=15932
 turbulent processes, quasi-equilib., kinetic description 3=396
 turbulent processes, quasi-equilib., kinetic description 3=5662
 turbulently heated, spectra and electron temp. 4=8717
 two-electron correlation function, solution 1=7073
 two-fluid model 0=16731
 two-particle correl. function, time depend. calc. 4=5596
 two plasma collision 3=12126
 two-temperature, currents and heat fluxes, kinetic eqns. 4=8689
 u.s. absorpt. in crossed elec. and mag. fields 3=9778
 u.s. propagation, dispersion relation 2=19956
 u.v. spectroscopy, high-temp., review 3=14337
 unstable, kinetic eqn. 3=21833
 unstable, 2-particle correl. function 3=21766
 v.h.f. and d.c. currents in a gas, correction 0=3765
 vacuum u.v. radiation physics, conference 3=5515
 valve, fast gas, for injection expts. 3=4158
 Van Allen radiation belts, ring currents calc. 1=21072
 Varena 1959 conference 1=5438
 velocities, ang. distrib., from discharges 2=7569
 velocity shear in mag. field, eddies 3=1965
 virial theorem 0=12612
 virial theorem 3=7543
 viscosity coefficient, in mag. field 2=9576
 viscosity, Grad approx. appl. 4=5598
 viscous, Couette flow, Langmuir potl. 2=19951
 viscous props. in mag. field 0=15022
 viscous rotating, boundary effects 3=16934
 Vlasov eqn., agreement with previous results 4=5592
 Vlasov eqn., integration 3=7511
 Vlasov eqn., nonlinear, dispersion reln. 4=11578
 Vlasov eqns., soln., in externally uniform mag. field 4=5594
 Vlasov equation, nonlinear, integration, rel. to Landau damping 2=5335
 Vlasov, transverse e.m. waves theory 3=14581
 Vlasov, transverse waves in ext. mag. field 3=14582
 vortex rings, exptl. evidence and theory 3=395
 wake of satellite in ionosphere 0=9023
 wall stabilization effects in theta-pinch configurations 3=412
 warm plasma, conductivity, rel. to frequency and temp., theory 0=1137
 warm, quiescent, wave analysis 2=19963
 warm, wave excitation, by a current source 4=511
 water vapour, decaying, microwave study 0=5294
 water vapour, 1-30 atm., 1000-30 000°K; composition, density, enthalpy and specific heat 1=10701
 wave interaction in inhomogeneities 1=7069
 wave motion, with anisotropic pressure, analysis 2=15920, 19961
 wave phenomenon, fast dynamical, in shock tube 3=1955
 wave propag., collision and temp. effects 4=2979
 wave propagation, quasi-one- fluid theory 3=9785
 wave propagation in, review 1=515
 in waveguide, e.m. wave propag., perturbation theory 0=12703
 in waveguide, excitation, by coaxial line 4=16657
 waveguide filled with plasma, excitation 3=7712
 waveguide, h.f. field radial distrib. meas. 4=19236
 waveguide, nonlinear theory 3=19455
 waveguide, plasma-filled, wave structure 3=24476
 waveguide, wave propag. and electron beam interaction 3=7707
 in waveguides, e.m. wave propagation behaviour 1=12019-20
 waveguides, plasma-filled, fast wave propag. 3=2129
 waves, absorption 0=3768
 waves, adiabatic, under mag. field, theory 2=1432
 waves, with anisotropic press., Chew-Goldberger-Low approx. 0=9163
 waves in electron clouds 0=19916

Plasma—contd

- waves, in electron streams 2=20010
 waves, excitation by charged particle beams 2=19960
 waves, in plasma with particle-velocity anisotropy 1=4601
 waves, propagation across a density discontinuity 0=3767
 waves, propagation, partially ionized medium 2=7612
 waves, self-similar, one-dimensional, along mag. field 2=13564
 waves, self-similar, one-dimensional, along mag. fld. 3=5672
 waves, transverse and longitudinal, coupling mechanisms 1=2986
 weak interactions 0=2372
 weakly ionized, charge-particle motion, hydrodynam. description 2=22218
 weakly ionized, e. m. perturbation, rel. to elec. cand. and electron heating 4=4810
 weakly ionized, electron temperature spatial distribution in homogeneous mag. fld. 4=5603
 weakly-ionized, kinetic theory 4=492
 weakly ionized, stability in uniform mag. field 3=14574
 weakly and strongly ionized, kinetic theory, review 2=203
 "weakly" unstable, finite Larmor radius stabilization 3=12151
 weakly unstable, kinetic theory, nonlinear Vlasov and BBGKY eqns. 4=21494
 X-ray continua and line spectra from highly stripped atoms 1=8820
 X-ray emission, in Sceptre III A 2=7631
 X-ray emission, soft, from theta pinch 4=18868
 X-ray spectr. meas. at high temp. 3=7503
 X-rays, hard, radiated, in strong mag. fld., rel. to E/p 4=11612
 X-rays prod. after plasma injection into mag. trap with cusp field 4=14737
 z-pinch compression, non-cylindrical, dense, high-temp. 3=12162
 z-pinch discharge, numerical calc. rel. to magnetic probe meas. 3=12161
 zero-temp. plasma, nonlinear oscills. and nonstationary flow 0=12620-1
 zero temperature, energy and pressure 2=5328
 zeta, e.m. radiation emission, sub-millimetre 1=9574
 Zeta, electron temp. and density rel. to pres. and mag. fld. 3=7594
 Zeta, energy loss processes 2=7628
 Zeta, radiation 0.1-2.0 mm wavelength, spectrosc. investig. 3=7594
 A, accelerated, velocity and impulse 1=9560
 A, confinement by periodic mag. field 2=13568
 A, discharge, l.p., plasma potential, probe meas. 1=18807
 A discharge, probe meas. in positive column 1=18797
 A, due to e.m. driven shock wave, spectr. study 2=11640
 A, enthalpy-entropy diag. to 10⁶ °K 2=9564
 A, flowing, thermodyn. phase changes theory 2=11637
 A, ion drift from plasma, influence of mag. field 2=1394
 A jet, elec. and optical studies 3=24276
 A, jets, energy content rel. to power input and gas flow 1=18893
 A, linear pulse discharges 2=22213
 A, partition function cutoff and ionization potl. lowering 2=1423
 A plasmajet, power output 2=1458
 A, shock-ionized, mag. field interactions 1=1970
 A, spectral line intensities 2=17845
 A, temperature spectroscopic 3=7502
 Ar, absorption coeff., continuous, 4000-7000 Å, 8000-24 000 Å 3=1972
 Ar, absorption oscillator strengths of CI-multiplets between 1100 and 1800 Å 4=19953
 Ar afterglow, dielec. const., meas. and theory 4=11641
 Ar, axisymmetric, interferometric analysis 4=16467
 Ar, bumpy torus, afterglow 3=19270
 Ar, deionization in magnetic field 3=19249
 Ar, effect of 1 or 2% Fe on plasma temp. 4=11633
 Ar, gun 3=19238
 Ar, hydromagnetic waves, fast, expt. 4=14714
 Ar jet, line broadening of ArI 4=9635
 Ar, K seeded, elec. cond. at atmospheric press. 4=24638
 Ar, metastable, excitation of N₂ 3=8263
 Ar, partition functions, thermodynamic props. 3=21819

Plasma—contd

- Ar, produced by shock waves, mag. driven, spectra 4=24648
 Ar, quenching by SF₆, electronegative seeding 3=19237
 Ar, shock-heated, elec. cond. between electrodes 4=11586
 Ar, in shock tube, thermodyn. state, spectral meas. 4=27527
 Ar supersonic streams, seeded with electronegative gases, props. 4=16468
 Ar, thermal transport, shock tube studies 4=16466
 Ar—Cs, elec. cond. and heating field 4=27545
 Ar—Cs, energy density rel. to plasma temp. 4=11633
 Ba, production 3=392
 Ba, spectrum, ionized, and temp. and electron densities, var. with current 4=8708
 Bi, solid state, cyclotron resonance, and Alfvén wave damping 3=4854
 C arc, viscosity, 5000-10 000°K 2=19985
 Cs, apps. and props. 4=8670
 Cs, classical diffusion, stellarator test 4=11680
 Cs, cold, diffusion across mag. field, electron density 1=4600
 Cs, conductivity, electrical, effect of electrode film barriers 3=21820
 Cs, diffusion, current effects, classical and Bohm enhanced density—rad. rel. 4=27514
 Cs, diffusion in mag. field, not Bohm 4=27515
 in Cs diode, mag. field effect 3=19166
 Cs, disintegrating, volume recombination 3=24278
 Cs, effect on thermionic energy converter 3=24206
 Cs, electrode work function, rel. to thermodynamic chemical potential 3=21820
 Cs, electron mobility, scatt. cross-sections 3=12186
 Cs, electron-neutral atom elastic scatt. theory 2=19991
 Cs, use in expts., survey 4=18790
 Cs gas discharge, probe characteristics meas. by 1-, 2-, 3-, and 4-electrode probes 4=14688
 Cs, generation of low-temp., highly ionized plasma 1=2981
 Cs, highly ionized, quiescent, generation and application 2=5354
 Cs, interaction with electron beam, microwave amplification 1=5441
 Cs, ionization, mobility, scatt., in weak plasma 4=21497
 Cs, partly ionised, viscosity 4=24562
 Cs, quiescent, steady-state generation 3=4107
 Cs, recombination, electron-ion, higher densities 3=21821
 Cs-seeded plasmas, elec. cond. meas. near thermal equil. 3=24279
 Cs, steady-state, quiescent, highly-ionized, generation 1=8324
 Cs, temp. and density meas., by spectroscopy 2=1447
 Cs, weakly ionized, Onsager phenomenological coeffs., calc. 4=5593
 Cu vapour wrapped with N or Ar, contraction and emission 3=7557
 D, and D + 6% O₂, electron temp. 1=8820
 D, density meas., with T ion beam 4=2990
 in D discharge, conductivity 1=7038
 D, electron density, interfer. meas. 2=5350
 D, electron temp. in strong shock wave 2=198
 D, fast-moving plasmoids 4=11604
 D, high-temp., threshold ion energy 2=9601
 D, from high vel. plasma guns 3=7520
 D, highly ionized, prodn. for compression experiments 3=12164
 D, injection, into cusp mag. field 1=7081
 D, ionization and heating, rel. to impurities 4=8686
 D, Joule heating in strong magnetic field 4=8685
 D, mag. field meas. during fast compress. 2=11655
 D, near-pure, from toroidal apparatus "Tokamak 2" 1=1900
 D pinches, meas. techniques, low-inductance capacitor banks 1=5476
 D pinches, neutron emission mechanism, energy of accelerated deuterons 1=9582
 D pinches, theta-type, framing-camera evidence for confinement 1=5466
 D pinches, transverse, instability mechanisms 1=1903
 D, in Scylla, emission of neutrons, protons, tritons, light, and X-rays 0=13385-7
 D, thermalization of fast injected ions 1=11927
 D, thermonuclear reaction yield, plasma parameters depend. 1=7410

Plasma—contd

- D theta pinches, impurity radiation losses 4=18958
 D in Thetatron discharge, rapid axial contraction 3=12155
 D, 3 keV, confinement by pulsed mag. field 1=5467
 D, transverse pinch, neutron-producing mechanism 1=2976
 D, two-temp. plasma, transfer coeffs., calc. 4=14631
 D in Zeta, trace-ion energies, spectroscopic studies 4=8700
 D-D fusion, in hot plasma 2=7629
 D*, trapping, prolonged confinement 2=19971
 D₂, heating by fast magnetic compression 4=8694
 D₂, highly-ionized, steady-state, development and study 3=7498
 GaP diffused junctions, microplasma obs. 4=4030
 H, anomalous resistance 3=12114
 H, arcing behaviour of metals 2=3020
 H, attractive two-body interactions 2=5332
 H atoms, ionization and excitation 1=19595
 H, Balmer line Stark broadening 3=4108
 H, Balmer lines, pressure broadening 4=28110
 H, Balmer spectrum interpretation 2=1398
 H, condensed in high vac., by high pot. field, apps. 4=27497
 H, contra-streaming, instability 0=3777
 H, cool, recomb. and ionization rates 3=21771
 H, disintegrating, space distrib. of electrons 1=293

 H, magneto-ionic theory 2=5483
 H, moving, elec. cond. decay 2=19934
 H, negative absorption and generator props. 4=5617
 H, partially ionized, eqn. of state 1=18834
 H, partially ionized, equilibrium props. 0=17007
 H, pinched, radiative losses from impurity ions 0=1131
 H, prod. by shock waves in SUPPER II 4=27521
 H, produced by impulsive discharge, spectroscopic study 1=260
 H, produced by shock waves, mag. driven, spectra 4=24648
 H, profiles of Stark-broadened Balmer lines 3=8176
 H, pulse discharge, ohmic heating 4=5608
 H, pulse discharge, spectral study, high temp. parameters 0=10914
 H, pure, prod., by mag. filtration 3=21822
 H, recombination through electron-electron collisions, calc. 1=18774
 H, as r.f. high-current proton source 2=11943
 H, radiative thermal cond., mean opacity 2=19932
 H, recombination radiation 1=7053
 H, recombination rates 2=19935
 H, run-away electrons meas. 3=12104
 H, shock-heated, temp. and density 0=19689
 H, spectra, line asymmetry 3=12753
 H, spectrographic analysis 4=18856
 H, Stark broadening of spectral lines 0=1480
 H, toroidal pinch, energy loss 2=7622
 H, toroidal Z-pinch, X-ray emission, rel. to runaway electrons 4=8703
 H, discharge, motion of striations 3=19196

Plasma — contd

- H₂, fully ionized, dispersion relations 3=4123
 H and D discharges in B.3. stellarator, electrostatic instability 0=17001
 H-H⁺-e collisional-radiative recombination, at low temp. and density 4=8682
 H-H⁺-e decaying plasma, recombination and energy balance 4=18808
 H⁺ and He⁺, cyclotron and parametric resonance 1=6096
 He afterglow, electron-atom momentum transfer, 10⁻³eV, 4.2°K 4=14638
 He, decaying, ionization processes 3=14517
 He, deionization rate in mag. field, ion and electron diffusion 1=11912
 He, diffuse lines, pressure broadening 4=28110
 He, discharge, microwave study 2=15899
 He, due to e.m. driven shock wave, spectr. study 2=11640
 He, electrodeless discharge in a torus, insulation from wall effects by hot gas 1=1905
 He, in electromag. T-tube, Stark profiles 2=3700
 He, electron collision freq. meas. 2=22228
 He, electron density and temp. from line profile meas. 4=18857
 He, electron-gyrofreq. harmonics emission 3=7465
 He, electron-ion recomb. to excited bound states 4=5565
 He, electron-ion recombination 2=3029
 He, electron temp. and percentage ionization, spectroscopic determ. 4=16486
 He, energy balance parameter meas. 4=531
 He, fast-moving plasmoids 4=11604
 He, high-temp., threshold ion energy 2=9601
 He, highly ionized, in steady-state 2=17820
 He, incoherent microwave radiation at 3000 Mc/s 0=2370
 He, injection, into cusp mag. field 1=7081
 He, ion drift from plasma, influence of mag. field 2=1394
 He, ion recombination in mag. field 3=14603
 He, in magnetic field, ion diffusion 1=13082
 He, magnetically driven shock wave production, spectroscopic study 1=261
 He, pinch, cine film study, mechanism 1=9586
 He pinch, linear, spectroscopic meas. 3=7559
 He prod., for 584A source 4=27305
 He, pulsed, anomalous afterglow of H 4=29920
 He, rate processes, simult. differential eqns. 4=14633
 He, recombination 3=4106
 He, recombination at low temp. in B-1 Stellarator 1=11924
 He, shock-heated, temp. and density 0=19689
 He, shock tube, wavefront 2=5048
 He shock waves, electron density and temp. 3=1752
 He, spark discharge, electron conc. meas. 2=19986
 He, Stark broadening of ion spectral lines, calc. 1=8809
 He, in theta pinch, electron temp. meas. 3=12142
 He, toroidal discharge, external elec. data 2=17839
 He, weakly ionized, spectrosc. investigation 4=18854
 He II spectrum displacement, blue 4=530
 He-Cs, microwave diagnostics, up to 3000°K 3=4135
 He-He⁺-e decaying plasma, recombination and energy balance 4=18809
 Hg, acceleration in r.f. field gradient 1=305
 Hg cylindrical column, noise radiation and scattering 3=383
 Hg, d.c. discharge, search for electrostatic sound wave modes 1=11961
 Hg, decaying, electron gas cooling 2=1426
 Hg, electron mobility, temp. var., transport cross-section effects 3=19236
 Hg gas discharge, probe characteristics meas. by 1-, 2-, 3-, and 4- electrode probes 4=14688
 Hg, ionization rates 0=7069
 Hg, jet, pinch instabilities, camera study 2=5464
 Hg, l.p. arc, probe meas. 2=3017
 Hg, low pressure, forces on ion-bombarded electrodes 0=15086
 Hg, number densities, a.c. and d.c. components, microwave meas. 3=21804
 Hg, pulsed probe meas. 2=1448
 Hg vapour discharge, fluctuations 1=16326
 Hg vapour, low-pressure, electron and ion density hysteresis effects 3=24287
 Hg⁺ large diameter plasma beam production 1=4618
 InSb, electron-hole, thermal pinching 3=25261

Plasma — contd

- in InSb, injected, in longit. mag. flds 3=10821
 InSb, pinch effects at 77°K 0=1672
 InSb, self-pinch distrib., microwave probe obs. 3=25366
 K, diffusion, current effects, classical and Bohm enhanced density-rad. rel. 4=27514
 K vapour, fully-ionized, transport props. meas. 4=11587
 Kr, anode-glow mode, negative resistance rel. to Ramsauer effect 3=5635
 Kr, behind shock wave 2=63
 Kr, local by applied magnetic fields, effects 3=12116
 Kr, shock produced, coupling of microwaves 3=16943-4
 Kr II line broadening meas. 3=10454
 Li, electron-ion, synthesis and props. 1=18828
 Li, use to enhance the excited-state population of a H-atom beam 4=6494
 N, condensed in high vac., by high pot. field, appls. 4=27497
 N IV ions collective motion, spectr. meas. 3=24304
 N, pulse discharge, ohmic heating 4=5608
 N, spectral line intensities 2=17845
 N, spectrum, Stark effect of local fields 4=9645
 N, Z-pinch discharge 2=19966
 N₂, afterglow, intensity change with time 2=15898
 N₂, arc heated, spectral continuum meas. 4=14652
 N₂, azimuthal discharge, whirl-like columns 3=4142
 N₂, heavy-particle temps., spectral meas. 4=14676
 N₂ jet, anode spot movements 3=14539
 N₂, vortex stabilized arc, spectral emission, narrow-band distrib. 4=18843
 NO, electron removal by recombination, attachment, and ambipolar diffusion 2=3030
 Na, production 3=392
 Na, solid, self-pinch instabilities 3=16950
 Ne constricted discharge, temp., electron conc. 1=13092
 Ne d.c. glow discharge, plasma conductivity 1=16287
 Ne discharge, pos. column, electron energy distrib. function 2=168
 in Ne discharge, temp. and electron density meas. 1=313
 Ne, electron collisions, energy depend. and frequ. 4=24586
 Ne, electron density, rate of fall 4=24664
 in Ne glow discharges, striation wave 0=2336
 in Ne positive column 1=4581
 Ne II line broadening meas. 3=10454
 Ne-A, diamag. moment, by spin resonance technique 0=19693
 Ne(78%)-He(22%), low-pressure, weakly ionized, electron mobility 3=14525
 Ne-Hg, meas. of temp. and electron density 3=14597
 O arc, Stark-broadened spectral lines, shifts and widths 3=24277
 O VIII Lyman spectrum, from theta pinch 4=19963
 O, spectra, Stark effect of local fields 4=9646
 O₂, decay, by recombination and electron capture 4=21495
 O₂, isothermal, ambipolar diffusion at high temps. 4=14642
 O₂, at 1-30 atm. 1000-30 000°K 0=7129
 O and N, electron energy distrib. 1=16317
 Si p-n junctions, micro, at crystal dislocations, stair rod 3=20351
 Si, p-n junctions, microplasma phenomena 4=7002
 Ti gun with hydrogenated electrodes, spectrum 3=7519
 Xe, anode-glow mode, negative resistance rel. to Ramsauer effect 3=5635
 Xe, high-pressure, radial temp. and mobility 3=19192
 Xe, shock-heating 1=169
- confinement**
 (subheading introduced in 1964)
 adiabatic trap with combined magnetic field 4=5686
 adiabatic trap with hybrid magnetic field 4=5644
 annular high-frequency discharge, compression by rising mag. field 4=8736
 ball lightning, plasmoid model 4=26800
 blobs, trapped by transverse mag. fld. 4=27520
 boundary shape between plasma and mag. field, self-consistent method of calc. 4=16490
 in "bumpy" current-carrying system 4=3059
 bunch passage through adiabatic trap with magnetic mirrors 4=544
 charged particle motion in corrugated mag. fields 4=29938

Plasma—contd

confinement—contd

charged particle motion in screw-symmetric mag. field 4=29939
 collisionless sheath in cylindrical geometry 4=8730
 column, r.f. 4=27546-7
 in combined mirror-cusp fields, stable equilibria 4=5649
 current sheath, collisionless, exact theory 4=8729
 cusp with axial conductor insulated from plasma, NIMFA I 4=21528
 cusp, pinch injection 4=24675
 cusp, in toroidal trap, with additional perpendicular field 4=18965
 device with reversed field 4=29957
 in discharge electric, h.f., induction, by bell-shaped mag. field 4=11548
 electron-hole plasma, self-pinch, theory 4=24677
 electron-hole, thermal pinching, time depend. 4=6810
 electrons, 5 keV, in simple mag. mirror 4=21527
 equilibria of toroidal plasmas, use of virial theorem 4=11647
 finite pressure and min. B 4=24672
 by h.f. fields, for fusion 4=8728
 forces due to h.f. field, with static inhomogeneous mag. field 4=14697
 heating in toroidal systems 4=29936
 helical instability suppression by mag. field, elec. field obs. 4=27555
 high frequency, expt. 4=14691
 inductive pinch, interaction of moving streams 4=24676
 injection and trapping meas. 4=16492
 inverse stabilized, electrode sheath effects 4=18944
 by mag. field, layer solution, stability 4=533
 in magnetic adiabatic trap, effect of local field perturbations 4=542
 magnetic bottle, charged particle motion 4=8743
 magnetic bottle with circular homogeneous field 4=8894
 magnetic field, dense plasma with current 4=21529
 magnetic field interaction with plasma clusters 4=24684
 magnetic fields, d. c., hydromag. approx. validity 4=14689-90
 magnetic, instability, due to resistivity gradient 4=14726
 magnetic, max. press. 4=18941
 magnetic mirror, reflection of jet 4=14698
 magnetic mirror traps, filling technique 4=5600
 magnetic mirrors, traps without losses 4=11654
 magnetic, periphery increasing, mag. moment invariance 4=24685
 magnetic quadrupole trap, injected, obs. 4=5648
 magnetic traps 4=8744
 magnetic traps, boundaries of motion 4=5645
 magnetic trap, with cusp field 4=14737
 magnetic traps with cusped-field, h. f. field applic. 4=27548
 magnetic traps, methods of filling with fast ions 4=18966
 magnetic trap, necessity for inward increasing field 4=11653
 in magnetic trap with opposed fields, expt. 4=8735
 magnetic trap particle motion, with secondary e. m. field 4=5646
 magnetic traps, review 4=24673
 magnetic well stability at finite plasma press., theory 4=29941
 maintenance and stabilization by h. f., e. m. fields 4=29937
 in mirror-cusp fields, equilibrium and stability 4=19029
 mirror, electron cyclotron reson., for trapping 4=24686
 mirror machine, adiabatic, effect of local mag. perturb. 4=16512
 mirror machine, adiabatic, plasmoids motion 4=16513
 mirror machine, DECA 1, props. 4=29956
 mirror machine with spatially periodic helical mag. field, resonance trapping 4=14699
 mirror system, mag., particle injection and accumulation 4=541
 particle distrib. trapped in mag. tube of force 4=5758
 particle motion in mag. field increasing towards periphery 4=534
 periodic multipoles 4=21521
 pinch, azimuthal, betatronic electron acceleration 4=8742
 pinch, azimuthal, H, mag. probe studies 4=21524
 pinch conditions at high temp. 4=496

Plasma—contd

confinement—contd

pinch, cylinder oscillation 4=11662
 pinch discharge, toroidal "hard core" 4=5685
 pinch expts, radiation losses 4=8698
 pinch, gas-insulated, stability 4=3006
 pinch, hard-core, compression by shock waves 4=18949
 pinch, linear, effect of capacitor arrangement on symmetry 4=5642
 pinch, linear, nonlinear wave motion 4=14695
 pinch, linear, unstabilized, shock waves, preceding snowplough 4=18836
 pinch, self-similar motion 4=539
 pinch stability, compressibility effects 4=24680
 pinch stability, theory and experiment 4=8740
 pinch switch, inverse, gas-triggered 4=11652
 pinch, toroidal, apparatus, equipped for mag. field programming 4=21542
 pinch, toroidal, equilibrium state 4=538
 pinch in toroidal plasma, twin-channel instability 4=5678
 pinch, toroidal, with reversed field, build-up and breakdown processes 4=21523
 pinch, tubular discharge, experimental study 4=8741
 pinch, ultra fast, large current skin effect 4=5640
 pinches, stabilized and hardcore, magnetic flux surfaces, particle motion 4=8739
 plasmoid isolation mechanism, h. f. 4=18947
 plasmoid movement at zero-point mag. field 4=18946
 plasmoids, axially symmetric force-free 4=18948
 r. f., one-dimensional theory 4=2991
 r.f. plasmoids, space charge aspects 4=11648
 rotation in θ -pinches, mechanism 4=5604
 runaway electrons in an ideal Lorentz plasma 4=14635
 self, necessity for gravitation 4=21522
 sheath eqn., collisionless, exact soln. 4=8731
 sheath, field meas. by beam probing method 4=18943
 sheath, r.f. theory 4=18942
 sheath, second, at cathode of low-pressure arc. 4=18945
 sheath theory, boundary-valued one-dimensional 4=24674
 sheath, thin, simulation by plane of wires 4=16491
 sheaths, structural model 4=8732
 shock front, luminous, pressure discontinuity in front 4=5286
 shock waves, low density, compress. and heating, models 4=27523
 slab, heat and momentum balance 4=18810
 slow expansion of column without mag. field 4=11634
 by spiral mag. field, ion Larmor radius and stability 4=564
 stability, linear pinch and hard core, meas. 4=11651
 stabilization by h.f. field, low-pressure plasma 4=535
 stabilization in trap with magnetic plugs 4=11646
 static e. m. field, rel. to plasma density, velo. and pressure 4=5647
 static mirror field, nonadiabatic injection 4=5650
 theta pinch with additional cusp field 4=21526
 theta pinch axial contraction shock 4=5639
 theta pinch, "balanced" mag. probe meas. 4=5637
 theta-pinch behaviour, computer programme, physical model 4=2993
 theta-pinch, breakdown phenomena 4=18957
 θ -pinch comparison with trapped mag. fields 4=29940
 theta-pinch, deformation rel. to mag. field inhomogeneity 4=18960
 θ -pinch, deuteron energy meas. from fusion reactions 4=24679
 theta pinch, drift in Ioffe multiple field 4=14694
 theta-pinch, electron density distrib., time variation 4=537
 theta pinch, electron density time- and space-resolved meas., from continuum emission 4=18955
 θ -pinch, electron temp. from impurity line radiation 4=18953
 theta pinch, flip instability avoidance 4=5641
 theta pinch, Hall rotation 4=2992
 theta pinch, i. r. emission, 70-250 μ data 4=5643
 θ -pinch light scatt. spectrum 4=24659
 θ -pinch, local parameter determ. by light scattering 4=18919
 theta-pinch with low trapped mag. fld, electron temp. and density 4=18952
 theta pinch, O VIII Lyman spectrum 4=19963

Plasma—contd

confinement—contd

- theta pinch, partially ionized, three-fluid model 4=18951
- theta-pinch pre-ionization system, microwave investigation 4=18950
- Θ -pinches, rotation mechanism 4=16495
- theta-pinch, slow, early rotation obs. 4=21525
- θ pinch, spectral line profile meas. 4=27317
- θ -pinch, turbulent motion detection by shadowgraph technique 4=18924
- theta pinch, X-ray emission, soft 4=18868
- toroidal, by axial mag. field with high rate of rise 4=8733
- toroidal discharge, electron density distrib. 4=24683
- toroidal, by mag. field, rotating, calc. 4=8734
- toroidal pinch discharge, stability, theory and experiment 4=8738
- toroidal pinch, magnetic compression 4=2977
- toroidal pinch, runaway electrons 4=18964
- toroidal plasma with conducting aperture limiter 4=536
- toroidal plasma, 2-stream instability, energy absorption 4=16493
- in traps with mag. mirrors, local field perturbations 4=543
- vacuum pump, getter-ion, grids 4=18967
- weak diffuse, constriction by l.f. and d.c. radial fields 4=18940
- Z-pinch, axial streamers 4=18962
- Z-pinch, critically damped, growth and decay meas. 4=18917
- Z pinch, damped, emission-line profile 4=18863
- Z-pinch, dynamic, thermal energy density, spectroscopic studies 4=18963
- Z-pinch, excitation of $m = 0$ instab., meas. 4=19043
- Z-pinch, linear, collapse stage, analogue study 4=8737
- Z-pinch, linear, pressure meas. 4=24681
- Al and Cu foils, z-pinch production 4=18351
- Ar, 5.4 kJ linear Z-pinch, collapse stage meas. 4=8737
- Ar pinch, shock waves 4=11649
- Ba, ion density meas. by resonance line radiation scattering 4=16487
- D, θ -pinch, influence of C impurity ion radiation 4=18961
- D theta pinches, ionization rates and impurity radiation losses 4=18958
- D, Θ -pinches, ionization rates and power loss by impurities 4=16494
- H, neutral, in θ -pinch, radial and time-resolved 4=18956
- H, toroidal Z-pinch, runaway electrons 4=8703
- He, pinch contraction, cylindrical shock wave current density meas. 4=18828
- He, Ar, Xe z-pinch at high gas densities 4=14693
- N, 5.4 kJ linear Z-pinch, collapse stage meas. 4=8737
- N₂, delayed implosion of Z-pinch 4=540
- Ne VII and VIII spectra in theta pinch, rel. to solar spectra 4=15283

devices

- (subheading introduced in 1964)
- acceleration by ionization displacement currents 4=19053
- acceleration by magnetic piston produced by travelling wave 4=19052
- acceleration, in r.f. field plus static mag. field 4=21550
- acceleration of rotating plasma 4=566
- acceleration by u.h.f. field and static field 4=19054
- accelerator, coaxial, Hall currents and vortices 4=5689
- accelerators, distributed charge exchange application 4=19056
- accelerator, e. m. wave, guided 4=27558
- accelerator, magnetohydrodynamic c.w. travelling wave accelerator 4=19057
- accelerator, snowplow eqns., small-time solns. 4=11650
- accelerator, travelling magnetic piston, magnetic insulation 4=19055
- adiabatic trap with combined magnetic field 4=5686
- adiabatic trap with hybrid magnetic field 4=5644
- Alpha assembly, discharge chamber, energy transfer to wall 4=3014
- Alpha apparatus, electrons, ordered motion 4=14730
- "Alpha", spectral investigations 4=8788
- Astron electron accelerator, 150 A 4 MeV 4=21604
- arc heaters, vortex stabilized, high-voltage 4=14622
- blobs from coaxial injector, structure 4=27506
- blobs, from coaxial source, energy spectra and structure 4=24637

Plasma—contd

devices—contd

- blob source, coaxial fast 4=21547
- blob source, conical, with pulsed gas injection 4=21546
- bunch generation by railtrack acceleration 4=21549
- C-Stellarator discharge, interpretation of impurity radiation 4=11681
- C Stellarator, Doppler temps. rel. to time, meas. 4=16515
- C Stellarator, effect of helical field on plasma behaviour 4=5688
- C stellarator, gas inlet valve, for pressure distrib. 4=18302
- C—stellarator, particle confinement and power balance 4=16514
- C Stellarator, plasma behaviour, effect of helical field, erratum 4=16516
- collisionless plasma duoplasmatron, for wave propagation studies 4=19063
- confinement device with reversed field 4=29957
- conical electrode source, energy spectrum 4=29958
- DCX-type, injection of lossless dissociating plasma 4=24714
- DCX-1, proton-trapping from Lorentz dissociation of H₂⁺ 4=5687
- dense, highly ionized source, coaxial, gas-fed, hollow electrode arc 4=19061
- dense plasma machines, diagnostics using mm and sub-mm techniques 4=18906
- diode, low-density, theory 4=21574
- diode, plane weakly ionized, potential distrib. 4=14626
- diode, review and recent designs 4=3603
- diode, transit-time oscill. in electron-ion stream 4=8765
- discharge, high current toroidal, electron temp. and cond. 4=29955
- electron tubes, multistream, nonlinear Hermite function expansion theory, for t.w.t. 4=21646
- generator, wall-constricted, axial flow 4=14736
- guns, acceleration and blob structure 4=19070
- gun, coaxial, 2 pulses 4=21548
- gun, electrodeless, three-coil 4=11682
- gun, impurity distrib. and energy spectrum, e.s. analysis 4=3015
- gun, rail-type, for short-lived puffs 4=14735
- gun, two-stage, repetitively fired, coaxial, characteristics 4=19068
- high-enthalpy flows, gasdynamic instrumentation 4=14739
- high-speed flows expanded from plasma states, gasdynamic diagnosis 4=14677
- homopolar cell, V-I characteristics 4=24718
- injection, highly excited H 4=19976
- injection, highly excited neutral atom prod., calc. corr. 4=24716
- injector, coaxial, plasmoid structure 4=19069
- ion source, negative ions 4=8846-8
- jet, air, characteristics and cutting appl. 4=14738
- jet from capillary discharge, characteristics 4=19071
- jet, energy and mass spectra of ions 4=567
- jet, recombination, de-excitation 4=21551
- jets, converging, meas. in induction discharge 4=8793
- jets, cylindrical, stability in mag. field 4=8791
- jets, effect in double electrode spark-gap 4=18764
- jets in magnetic fields 4=19072
- jets, in pulsed discharge 4=8792
- jets, u.s. 4=19073
- Levitron, toroidal "hard core" pinch discharge 4=5685
- m.h.d. generator, maximum efficiency 4=18666
- MHD generators, accelerators and shock tubes, non-equilib. monatomic plasmas, electron-ion reaction rates 4=19058
- MHD generators, with non-equilib. ionization in alkali metal vapours and seeded gas, theory 4=18663
- magnet, 10 kG, air cooled 4=3089
- magnetic mirror machine, electron and ion spectra 4=8790
- magnetic mirror, production of hot dense plasma 4=21543
- magnetic trap with cusp field 4=14737
- mirror machine, adiabatic, effect of local mag. perturb. 4=16512
- mirror machine, adiabatic, plasmoids motion 4=16513
- mirror machine, DECA 1, confined plasma props. 4=29956
- mirror machine, neutral injection, instabilities 4=24715
- mirror machines, stable against interchange modes 4=5651

Plasma—contd

devices—contd

- NIMFA I, cusp with axial conductor insulated from plasma 4=21528
 nuclear fusion reactors, review 4=21545
 OGRA, cyclotron instability, calc. 4=555
 Ogra mirror-machine, hydrogen ion source 4=19059
 pinch switch, inverse, gas-triggered 4=11652
 plasma diode, stability diagrams 4=27463
 plasmatron, spectroscopic characts. 4=29959
 plasmoids, electrodynamic acceleration in coaxial system 4=14636
 powder—plasma transformation by photolysis 4=19062
 Q machine, effect of ion loss on diffusion, Ce plasma 4=14733
 Q-1 source for low temp., fully ionized, quiescent plasma, apparatus and theory 4=8789
 rail accelerator, density meas. by schlieren photography 4=14734
 Sceptre IV, electron density, interferometric meas. 4=16444
 Sceptre IV, megajoule discharge system 4=14728
 Scylla 1 theta pinch, mag. field meas., external probe 4=529
 shock tube, coaxial electromagnetic, acceleration mechanism 4=18334
 shock tubes, electromagnetic, luminous front thickness 4=18842
 source, cathode in mag. field 4=19064
 source, conical induction type, of plasma clusters 4=24717
 spectrochemical analysis source, jet, for alkali earths 4=10672
 spectroscopic light source, mag. stabilized jet 4=5389
 stabilization, by h. f. fields, for fusion 4=8728
 Stellarator with helical windings, mag. surfaces, effect of transverse mag. field 4=19066
 Stellarator, mag. field line resonance motion 4=19067
 stellarator, particle losses of Cs plasma 4=11680
 SUPPER II, H plasma prod. by shock waves 4=27521
 Table Top III, plasma instability with rotational effects 4=5676
 thermionic convertor, Coulomb scatt. effects 4=24540
 thermionic converter diodes, fission-heated 4=5548
 thermionic convertors, influence of CsF atmosphere on W electron emission 4=18662
 thermionic diodes, low-voltage arc mode investigations 4=18661
 theta-pinch apparatus, breakdown 4=18954
 570 kJ theta-pinch, plasma properties 4=24678
 torches and furnaces, high-temp. prod., conference 4=24420
 Tokamak, ion temps., spectral meas. 4=14731
 toroidal Joule heating windings, correction 4=8785
 toroidal pinch apparatus, equipped for mag. field programming 4=21542
 toroidal, "Tokamak", stability increase with strong, longitudinal mag. field 4=8786
 Zeta, D plasma loss 4=8787
 Zeta, neutron energy spectra 4=3013
 Zeta, spectroscopic investigation, 0.1 to 2.0 mm 4=8699
 Zeta, spectrum, 16-400 Å 4=19065
 Ar arc, 50-60 A, 11000-12000°K 4=24666
 Ar gun, two-stage, repetitively fired, coaxial, characteristics 4=19068
 Ar plasma jet, excitation temp. meas. using transition probabilities of lines 4=12382
 Ce diodes, in-reactor tests 4=27465
 Cs, diode, radial potential and electron density 4=21575
 Cs-filled thermionic converter, low-freq. oscillations, expt. 4=11504
 Cs and K thermal plasma production 4=8671
 Cs thermoelectric converter, Cs pressure influence 4=444
 Cs-vapour dispenser 4=21544
 H arc, low-density plasma for mol. ion dissociation 4=5690
 H, high-density, clean, almost fully ionized, generation by whirl stabilized arcs 4=19060
 He gun, two-stage, repetitively fired, coaxial, characteristics 4=19068
 He jet, spectroscopic invest. 4=5618
 N₂ gun, two-stage, repetitively fired, coaxial, characteristics 4=19068

Plasma—contd

electromagnetic wave propagation

(subheading introduced in 1964)

- absorption, rel. to instability of one-dim. packets 4=5627
 absorption, near ion cyclotron reson. 4=24652
 absorption, microwave data, near ion cyclotron reson., mag. field depend. 4=24653
 absorption, quantum derivation 4=16482
 afterglow plasma, narrow-band resonances 4=18847
 anisotropic plasmas, temp. and collision effects 4=18874
 atmospheric gases, magnetoplasmas, microwave gyro-interaction 4=18879
 beam—plasma amplifier for mm waves 4=16509
 in beam—plasma system in mag. field 4=516
 boundaries and nonuniformity effects 4=18871
 Brownian plasma 4=18873
 cables, anomalous dispersion, cause 4=18892
 Cherenkov heating in high temp. plasma 4=8695
 collisional dissipation at cyclotron harmonics 4=8718
 column with general impedance bdy. conditions 4=14665
 communication effects, correlation simulation 4=16651
 conductivity, quantum effects, dense plasma 4=8715
 conference, Paris (1963) 4=18671
 conference, San Diego (1963) 4=14624
 coupled e.m. and acoustic fields, scalar Green's function represent. 4=21513
 coupled e.m. and acoustic waves 4=29929
 coupling of magnetohydrodynamic to e.m. waves at a discontinuity, nonpropagating field (erratum) 4=5625
 coupling bet. plasma wave and radiation at vacuum boundary 4=21508
 cyclotron harmonics, relativistic dissipation 4=11629
 cyclotron reson. regions, refractive indices 4=11630
 cyclotron wave damping in nonuniform mag. field 4=14664
 in cylinder, compressed 4=14717
 cylinder, plasma-coated conducting, scatt. 4=24847
 cylind. sheath 4=3178
 cylindrical plasmas, propagation along mag. field 4=515
 diffraction by conducting plane, calc. 4=27644
 diffusing slab, fully ionized, rel. to frequ. 4=14659
 dipole radiation in medium and plasma slab 4=5621
 dispersion and absorption by hot inhomog. cylinder 4=18872
 dispersion anomaly 4=719
 dispersion curves with collisions, calc. 4=18977
 dispersion relation rel. to electromag. instability 4=24702
 Doppler effect in inhomog. anisotropic ionized gases 4=8712
 dynamic, nonlinear, harmonic radiation 4=27666
 e.m. energy coupling to bounded one-dim. inhomogeneous plasma 4=18880
 e.m. and plasma waves, coupled, excitation by ring source 4=18870
 electrical wave excitation, by transverse e.m. wave 4=2981
 emission and absorption near plasma frequency 4=18850
 energy transfer of right circularly polarized wave 4=18876
 extra-ordinary mode, Fresnel eqn. generalization 4=16480
 fluid-mechanical sources, ext. mag. field effect 4=27633
 focusing by anisotropic plasma interface 4=29924
 free energy in mag. field and plane polarized wave 4=14662
 guide cylinder, in strong mag. field, hydrodynamics at high phase velo. 4=19235
 guided, anomalous dispersion due to radial inhomogeneities 4=18893
 h. f. conductivity, effect of neutral particles 4=24644
 half-space, line source radiation characts. 4=24823
 harmonic excitation and re-radiation from non-uniform regions 4=519
 hollow cylinder resonances, asymmetry effects 4=11622
 hot, graphs 4=11613
 immersed aerials pattern, redistribution into side lobes 4=3153
 from immersed electric dipole 4=722
 incoherent, Boltzmann eqn. calc. 4=11235
 inert gases, magnetoplasmas, microwave gyro-interaction 4=18878
 inhomogeneous rarefied plasma in mag. field 4=8750

Plasma—contd

electromagnetic wave propagation—contd

- interaction and dynamic nonlinear phenomena, conference 4=14657
- interaction of longitudinal and transverse waves 4=27530
- interaction, nonlinear, with wave in mag. field 4=5628
- ion gyroresonance, plasma energy absorption from h. f. field 4=24661
- isotropic, reflection, interactions 4=27665
- kinetic theory for field and particle fluctuations 4=8692
- laser radiation large-angle scattering 4=18883
- layer in stat. mag. fld, non-linear interact. with e.m. wave, mixing theory 4=24656-7
- light-light scatt. theory 4=29927
- light-light scattering, quantum calc. 4=27337
- light-off-light scatt. theory 4=27532
- light mixing 4=18885
- light scatt., freq. shift for relativistic plasma 4=14668
- light scatt., from laser, for electron density meas. 4=8719
- light scatt., laser, width, for electron temp. meas. 4=14670
- light scatt. by Θ -pinch, spectrum 4=24659
- light transmission for inhomogeneous plasma, linear absorption method applicability 4=11348
- long waves assoc. with disturbances 4=16484
- lossless, at high freq. rel. to electron gyrofreq. 4=3177
- low-press. plasma with metal boundary, slow-wave propag. 4=11628
- magnetoacoustic resonance, theory and expt. 4=11658
- in magneto-active plasma, analysis 4=14658
- magnetoactive plasma, dispersion relation for refractive and absorption indices 4=11795
- magnetoplasma, electric vector, soln. from conductivity tensor and wave eqn. 4=5620
- magneto plasma-filled waveguide, analysis 4=5622
- magnetoplasma, hot, Appleton-Hartree theory, generalized 4=18976
- magnetoplasma, lossy, v.l.f. refln. 4=16670
- magnetoplasma, microwaves, 8.6 kMc/s 4=2984
- magnetoplasmas, nonlinear e.m. wave propagation 4=11614
- magnetoionic, radiation resist. of elec. dipole 4=24849
- microwave emissivity, effect of turbulence 4=18864
- microwave interaction, multidimensional nonlinear theory 4=16481
- microwave, interaction with thermally ionized plasma 4=8716
- microwave phase shift and attenuation 4=11624
- microwave radiation, from magnetoactive plasma 4=14654-5
- microwave reflection coeff. meas. for electron density determ. 4=27539
- microwave refl. coeff. rel. to electron density, collision freq. and cyclotron freq. 4=14663
- microwave reflection, nonuniform plasmas 4=11615
- millimeter guided wave propag. along mag. field, u.h.f. method 4=18994
- modulation by acoustic waves 4=27529
- mutual nonlinear interaction of several waves 4=520
- negative absorpt. at cyclotron freq. 4=29928
- negative absorption due to electron stream Coulomb scatt. 4=11619
- nonequilibrium plasma, e.m. wave transformation and scattering 4=11626
- nonlinear transverse waves, theory 4=514
- oblique rays in plasma cylinders, tracing 4=21507
- optically thick plasma, non-thermal line radn. 4=18851
- oscillations 4=14711
- overdense bounded magnetoplasma, expt. analysis 4=24658
- PIG discharge, electron cyclotron frequency harmonics 4=18849
- partly ionized gas, scattering, theory 4=5623
- penetration in turbulent heating, spectral meas. 4=8717
- perturbation, convective instab. in gravity field 4=8764
- phase shift by glow in hollow conductor, current var. 4=21659
- polarization effects, hot and cold cathode discharges 4=8711
- polarized, right circular, along mag. field lines 4=5619
- positive column afterglow, quasi TE_{11} mode absorp-tion 4=14904
- positive column, electrostatic resonance analysis 4=18886
- power scattered from density fluctuations 4=2983

Plasma—contd

electromagnetic wave propagation—contd

- progressive wave non-linear model for mag. field presence 4=29925
- propagation velocities 4=18975
- quantum and classical plasmas, absorption 4=11621
- r. f. emission, not in thermodynamic equilibrium 4=8704
- r. f. scattering, incoherent 4=18884
- radiation by charged particle in helical orbit 4=27634
- radiation noise spectrum from cylinder, scatt. TM, TE waves 4=18889
- radiation from point source 4=8707
- radiation, in steady mag. field 4=721
- radiation from uniformly moving charge, theory 4=8709
- reflection and absorption of e. m. wave by bounded plasma 4=8714
- reflection acceleration 4=24655
- reflection delay for freq. meas. 4=14666
- reflection, fluctuation effects 4=16483
- resonance effects, due to e. m. wave-plasma cylinder interactions 4=18887
- resonances associated with slow e. m. standing waves 4=5635
- resonances, h. f., of a slab condenser system, meas 4=14673
- right angles to external mag. field, calc. 4=18875
- rocket exhausts containing K and Cs in supersonic flow 4=18905
- scattering, by flare, comparison with approx. 4=14893
- scattering, incoherent, from hot plasma 4=521
- scattering of laser, by laser driven oscills. 4=21509
- scattering by perfectly conducting cylinder in compressible plasma 4=14669
- scattering by plasma fluctuations 4=560
- scattering, resonant, by plasma cylinder 4=14667
- scattering, for thermal nonequil., rel. to number-density fluctuations 4=11627
- secular and nonsecular behaviour of cold plasma equations 4=11620
- shock-produced, microwave refl. 4=29919
- slabs, along mag. field 4=517
- in slabs and columns 4=18890
- slow waves in plasma guides and cables 4=18891
- source of collisionless plasma for wave studies 4=19063
- space vehicle communication effects, axial mag. field effect 4=24824
- in "spoke-wheel" magnetic field 4=11617
- stability of e. m. perturbations propag. across mag. field 4=2982
- strong microwave interaction 4=18877
- surface-charge wave resonance on cylinder, from micro-wave absorpt. 4=5624
- surface wave spectrum on vacuum boundary of magnetized plasma 4=21510
- surface waves along slabs 4=8710
- theory approx., for strong mag. field 4=29926
- thermal radiation, equil. black body theory 4=18478
- third harmonic, non-linear growth 4=21511
- transmission coeff., rel. to layer props. 4=29923
- transport equation, electrical, frequency and wavelength dependent 4=11592
- transversal, rel. to longitudinal plasma wave generation 4=18995
- transverse to longitudinal conversion at boundary with dielectric 4=14886
- transverse waves along applied mag. field 4=18869
- two-fluid compressible, electro-acoustical wave excitation 4=29930
- underground explosion, e. m. pulse generation from expanding plasma 4=13773
- use in confinement investigation 4=14691
- varying large amplitude field, energy absorption 4=8779
- at velocity discontinuity, reflected and transmitted components 4=24654
- vertical dipole field in void above plasma 4=8902
- Vlasov eqn., nonlinear, dispersion reln. 4=11578
- waveguide, cylindrical, nonlinear theory 4=14903
- waveguide, plasma-filled, microwave propagation 4=11616
- waveguide properties, gas-electron beam system 4=24660
- in waveguide, reflection, at open end 4=24852
- whistler mode, instability due to gyrating electron stream 4=11618

Plasma—contd

electromagnetic wave propagation—contd

- whistler modes, origin interactions 4=27667
- whistlers, for nonisotropic relativistic component 4=10911
- Ar afterglow plasma, 928° Mc/s 4=14660
- Bi, Alfvén waves in solid, cyclotron resonance 4=12716
- Cs and K thermal plasma, l.f. waves 4=8671
- H, effect of spectral lines on radiant ht. cond. coeff. 4=21330
- Ne plasma cavity, microwave Faraday effect 4=18894

measurement technique

(subheading introduced in 1964)

- arc-jet meas., collimated total radiation probe 4=14682
- ballistic or ball-throwing device for density and momentum meas. 4=21516
- C Stellarator, Doppler temps. rel. to time, meas. 4=16515
- camera, for directed motion 4=27537
- column electron density by surface wave resonances 4=27535
- complex permittivity, low and high freq. 4=18915
- conference, San Diego (1963) 4=14624
- correlation techniques 4=16651
- decay in mag. field, resonator method study 4=18899
- dense plasma diagnostics, microwave reflection method 4=18901
- dense plasma machine diagnostics, mm and sub-mm techniques 4=18906
- density, comparison between microwave and probe methods 4=11635
- density in D plasma, by T ion beam 4=2990
- density distrib., electrons, by moveable modulated dipole reflector 4=14674
- density distribution, low pressure high temp. plasma 4=14198
- density, by microwave phase shift meas., relativistic errors 4=8723
- double probe meas. using microwave TR 4=16489
- e.m. wave short pulses 4=14679
- elec. conductivity 4=24641-2
- electron density, by laser scatt. 4=8719
- electron density, microwave free space method with lens antennas 4=5632
- electron density profiles, microwave meas. 4=18908
- electron density spatial distrib., by microwave free space method 4=8721
- electron density in transient plasma by microwaves, attenuation correction 4=5634
- electron and ion temps., determ. by u.s. method 4=24662
- electron temp. and density at low pressure, magnetic flux meas. 4=18898
- electron temp. meas. for non-thermodynamic equilb. 4=29932
- electron temperatures, spectroscopic method 4=2986
- electrostatic analyser, for blob energy anal. 4=24637
- emission-line profile meas. from damped Z pinch 4=18863
- energy spectrometer, as diagnosis tool 4=18904
- errors in microwave meas. due to incomplete focusing 4=16488
- far infrared density meas. 4=18909
- flame-temp. meas. rel. to low-temp. dense plasmas 4=29933
- flows, high speed, microwave diagnostics 4=18903
- frequency, from e.m. wave reflection delay 4=14666
- high-enthalpy flows, gasdynamic instrumentation 4=14739
- high-speed flows expanded from plasma states, gas dynamic diagnosis 4=14677
- high-temp. plasma, electron temp., spectroscopic determ. 4=8722
- interactometer, free-space microwave system for diagnostics 4=18907
- interferometer, microwave, for density 4=18920
- interferometry, microwave 4=524-5
- ion density decay, magnetoacoustic meas. 4=11658
- ionic temperature, rapid measurement 4=18913
- ionization-front in T-tube, propagation meas. by 3 cm microwaves 4=5610
- IXION-type, with crossed elec. and mag. fields, rotating velocity meas. 4=18922
- Langmuir double-probe, for unstable plasmas 4=27541
- Langmuir probes, approximation for ion current 4=11636

Plasma—contd

measurement technique—contd

- Langmuir-probe characteristics, semi-logarithmic, rapid meth. 4=11640
- Langmuir probe, characteristics in strong mag. field 4=5636
- Langmuir probes, dynamic properties 4=11637-9
- Langmuir probes, improvement of techniques and errors 4=27542
- Langmuir probe in mag. field, electron current 4=18927
- Langmuir probe for variation meas. by sampling 4=24671
- laser interferometer, appl. 4=27327
- laser radiation scattering, large-angle, for electron vel. distrib. and density 4=18883
- magnetic field meas., by Zeeman effect 4=18916
- magnetic probes, "balanced", theta pinch 4=5637
- microwave cavity method for gaseous plasmas 4=18936
- microwave diagnostics in electrodeless discharges 4=14680
- microwave diagnostics theory 4=14678
- microwave dual interferometer 4=18902
- microwave method, shock tube ionization 4=24663
- microwave reflection probe for high electron density determ. 4=27539
- microwave switch use at high powers 4=27538
- microwave techniques, free-space, comparison 4=27536
- neutral atomic particle emission meas. 4=8701
- number density meas., r.f. method 4=14675
- optical maser probing theory 4=18910
- optical refraction meas. with laser beam 4=18882
- peaking strip probes, h.f. properties 4=21518
- photoelec. interference spectroscopy and image intensifiers for time, spatial, and spectral resolution 4=18895
- photoelectric multipliers, for short-life plasma investigation 4=522
- pickup-coil for mag. field meas. in Scylla 1 theta pinch 4=529
- plasmoids, instant. velocity, by microwave refl. 4=14684
- plasmoids, microwave meas. methods 4=5630
- plasmoids, visual study in mag. field 4=18918
- positive ion collection by immersed probe 4=8726
- positron annihilation 4=18921
- potential meas., continuous, 0-4 kV 4=16485
- probe, electric, for high-current shock discharges 4=528
- probes, electrostatic, spherical, in slightly ionized gas, asymptotic theory 4=527
- probe, H-molecular beam 4=8724
- probes immersed in discharges, h.f. noise 4=5638
- probe for interplanetary plasma 4=20965
- probe ion current calc. without neglecting electron density 4=18931
- probe meas. of plasmoids 4=18937
- probes, moving cylindrical, current collection 4=24670
- probes, noise processes 4=18707
- probe particle collection depletion at high press. 4=18926
- probe perturbation of density and potential 4=18928
- probe, r.f., finite transit time effect 4=18935
- probe, r.f., for ionospheric and exospheric electron-density meas. 4=7905
- probe, r.f., resonance in d.c. 4=21517
- probe, resonance, for immediate electron density, temp. and collision freq. meas. 4=18930
- probe, resonance, in mag. fld., theory 4=27540
- probes, review, lab. and space vehicles 4=21519
- probes, shot noise due to electron and ion current, theory 4=8725
- probes, spherical electrostatic, continuum theory 4=526
- probe, for stellarator 4=8727
- probe, wide band, electron density meas. 4=18933
- r.f. field, by electron beam interactions 4=8720
- r.f. probe for electron-density meas. 4=5635
- rail accelerator, density meas. by schlieren photography 4=14734
- resonance probing in mag. fld. 4=27543
- resonator appl., Fabry-Perot, focussed 4=24668
- rocket exhausts containing K and Cs in supersonic flow 4=18905
- rotating plasma, between coaxial electrodes, with crossed elec. and mag. fields 4=18923
- ruby laser light magnetorotation, rel. to electron density determ. 4=18911
- sheath, field meas. by beam probing method 4=18943

Plasma—contd

measurement technique—contd

- use of short e.m. pulses, transmission and refl. 4=14679
- sheath r.f. characts. 4=29931
- slow expansion of column without mag. field 4=11634
- spatial resolution, spectroscopic method 4=18912
- spectral line profile, photoelec. recording 4=18401
- spectral line self-absorpt. meas. technique 4=24665
- spectrograph, rapid scan, rel. to H plasma 4=27315
- Stark effect quadrupole shift, and profile asymmetry 4=27533

 Teflon counting-cell, for flowing radioactive solutions 0=17515
 Teflon, e.s.r., liq.-He temp. 3=20657
 Teflon, e.s.r. studies of γ -irradiation effects 0=6420
 Teflon fibres, n.m.r. absorption 0=21225
 Teflon, friction, on teflon and steel, effect of pressure 3=6808
 Teflon, positronium decay 3=4380
 Teflon, positronium mag. quenching in 3=5992
 Teflon, production of electret state 3=17947
 Terylene fibres, surface replication by rolling 0=8263
 thermal cond., meas. apparatus 2=19746
 thermal conductivities below 1°K 4=6758
 thermoplastics, rolling friction 1=11526
 thin films, sound velocity meas. 0=6859
 thiokols, liq., U. S. wave absorpt. 4=24208
 tint and greyness determination 1=245
 u.s. attenuation of longit. waves meas. 2=20924
 Vestopal films, irradi., mass-thickness var. with time 2=12945
 vitrification study by luminescent method 0=4680
 Zapoplack films, irradi. mass-thickness var. with time 2=12945

Platinum

- abrasion, theory 0=3164
 abrasion wear and friction 1=1353
 ad- and de-sorption of K, activation energy 1=20689
 adsorbed K layer, K⁺ photoemission 2=22272
 adsorption of Cl₂ and TiCl₄ 2=19120
 adsorption of CO 3=13571
 adsorption, of chloride and phosphate anions with desorpt. multiphase potentiodynamic meas. 4=30890-1
 adsorption of gases, electron diffr. study 4=23602
 adsorption of H₂ and O₂, partial molal enthalpies rel. to coverage and temp. 4=26721
 adsorption of He, Ne, A and Kr 2=8889
 adsorption of ions, radiochem. and electrochem. study 2=15105
 aerosol, charged particle mobility analysis 2=4570
 in air, accommodation coeff. rel. to pressure 4=27218
 atom, L-shell fluorescence meas. 3=4711
 atomic structure, relativistic self-consistent solution 0=9741
 band structure, effect of spin-orbit coupling 4=28412
 Bordoni peaks, rel. to deformation and annealing 3=23298
 catalysts, spectrophotometry and light scatt. 2=21595
 chemisorption of gases 1=5110
 coating for u.v. high reflectance 2=17641
 condensation in vac. microheterogeneous 2=1308, 7468
 conductivity, electrical, temp. var., 0-900°K and thermometers < 90°K 3=17819
 contact with CdS single crystals, electrical props. 4=12853
 corrosion in HBr, effect of α -rays 0=12100
 counter-tube cathode, spectral yield curve 0=9229
 crystal dislocation relaxation peaks after deformation at 4.2°K 4=7429
 damage by fission fragments 2=612
 density in liq. state 2=2701
 diffusion in Au, tracer conc., 800°C to Au m.p. 0=20846
 diffusion and desorption of Na, K, Ca impurities, thermionic emission study 0=6061
 diffusion study by impurity thermionic emission 3=4203
 dislocation relaxation 1=17533
 dispersed on alumina, L₃ X-ray absorpt. edge, crystal size and gas adsorption effect 4=7152
 e.s.r. of Pt³⁺ in Al₂O₃, Jahn-Teller splitting 4=28879
 elec. resistance anisotropy 1=3726
 elec. resistivity of films, effect of adsorbed Hg 1=17612
 electrical contacts, metal migration 3=9690
 electrical double layer, in KNO₃, KNO₃ + NaNO₃, impedance 3=16168
 electrical resist. of wire, recovery after cold working 4=15524
 electrical resistance, rel. to contact with H₂, air, Ar 4=10034
 electrodes, differential capacity, frequency var. 4=15845

Platinum—contd

electrodes, (Pd-H) α s, effect of H₂-D₂O isotope exchange 2=4546
 electromigration 3=22829
 electron diffrn. exam. of (100), (110) faces with CO absorbed 3=6899
 electron inelastic scatt. coeffs. secondary electron emission, dependence on primary energy 1=13127
 electron-microscopic decoration use 2=15120
 electron secondary emission 2=3077
 emissivity, 1.5-15 μ 0=16917
 emissivity, temp.-independent, study and interpretation 0=14875
 equations of state at high pressure 0=11549
 evaporation, for electron microscope shadow-casting technique 0=8293
 exo-electron emission, u.v. induced 2=7638
 field emission, effect of cryst. defects 2=20015, 22246
 field emission tips, annealing, polyhedron formation 4=14742
 filament, sue in electron microscopes 0=15079
 films, contact pot. and work function 2=8268
 films, effect of gas adsorption on elec. cond. 1=17611
 films, effects of parallel-plane ion bombard. 2=18622
 films, effect on slip of Ag substrate 0=21113
 films, elec. cond., effect of gas adsorption 1=17613
 films, elec. resistance, temp. var., rel. to thickness 3=15544
 films, fission fragment damage obs. 2=10426
 films, formation by sputtering 2=8880
 films, reflectance and transmittance 1=11836
 films, reflecting, for vacuum u.v. 3=19005
 films, very thin, electrical conductivity, rel. to gas adsorption 3=15549
 films, work function 2=9612
 fission fragment tracks, thermal processes 2=12484
 foil, speed of evap. in vacuum furnace 4=5472
 foils, annealed and irradiated, dislocations 3=8437
 foils, dislocations and fission damage 2=16661
 foils, dislocations and fission damage 3=25275
 foils, loops and dots, rel. to irradiation 3=17701
 friction in reciprocating sliding, low values 0=3165
 inelastic scattering of neutrons 1=13443
 internal friction peaks in stage III recovery 4=26523
 internal friction, recovery, after load removal 1=7815
 ion adsorption by mechanically and heat treated wires, foils 2=12950
 ion bombard., lattice defects 2=23170
 ion emission, secondary, by inert gas ion bombard. 0=17043
 lifetime, under load 0=16223
 magnetic suscept. and Knight shift, interpret. 4=17699
 magnetic susceptibility and electronic sp. ht. 4=28780
 in meteorites 2=24107
 Mössbauer effect in embedded Au¹⁹⁷ 1=11147
 Mössbauer effect by Fe⁵⁷ impurity, meas. 4=12579
 n.m.r. of Pt¹⁹⁵, 24°-299°K meas. 3=13315
 n.m.r. rel. to spin-spin interaction and electron configuration 2=18967
 nuclear reactor fuel, review 2=10188
 neutron irradi., focusing collisions along twin boundaries 1=11246
 optical films, preparation and properties 3=9603
 paramagnetic susceptibility, effects of s-d exchange 1=14674
 photoelectric emission, X-rays, 0.7-30 keV 3=14638
 photoelectric emission yield for 1.54-13.3 Å X-rays 1=13109
 photoelectric yield data, vacuum u.v., 8 to 24 eV 3=13145
 photoelectron emission 1=13108
 plastic deformation, grain boundary component, temp. var. 4=23195
 point defects 0=20798
 point defects in irradiated metal, review 3=8420
 preferential orientation on prod. from (NH₄)₂PtCl₆ 0=11992
 prismatic loops, rel. to irradiation 3=22767
 recoilless Rayleigh scattering in, using Mössbauer effect 0=11560
 reflectivity, u.v., absence of temp. depend. 2=18790
 resistance-temp. relationship at low temp. 0=7002
 resistance thermometer bridge 0=7003-4
 resistance thermometers 630.5-1063°K 0=8856

resistivity rel. to temp. down to liquid He temp. 1=19830
 secondary electron emission 0=5341
 secondary ion emission, A⁺ ion bombardment, 22 keV 3=24373
 self-diffusion 2=23206
 specific heat, 1.3-4.2°K 1=3606
 spectral luminous efficiency, maximum 4=29798
 sputtered by Hg⁺, ang. distrib. 0=1174
 sputtering, under Cs ion bombard., cathode sputtering ratio 4=24753
 sputtering by inert gas ions rel. to mass ratio 4=19124
 stacking-fault density meas. 4=9978
 stacking faults, energy calc. 4=12769
 suitability as thermal conductivity standard 4=11385
 surface self-diffusion and energy 2=15087
 surface tension at 1800°C 2=2692
 surfaces, catalytic action in atomic beam recomb. 2=4522
 temp. change at boundary with superfluid He 2=15838
 temp. change at boundary with superfluid He 3=5570
 thermal cond., 0-950°K, high temp. reference standard 3=25216
 thermal expansion, lattice const. changes, from Bradburn-Fürth eqn. of state 4=20219
 thermal expansion, 1.5° to 12°K 4=9864
 thermal expansion, 1.5-12°K, electronic and lattice contri., and Grüneisen parameters 4=17370
 thermionic emission, in CCl₄ and Freon 0=10936
 thermionic emission of ions, effect of ambient gas 3=14663
 thermocouples with noble metals, instability 3=1861
 thermoelec. power, effect of quenching and work hardening 2=23486
 thermo-e.m.f. study of vacancy quenching and movement 0=17955
 thermocouple, with Rh, reference tables, 0°-1800°C 4=27363
 thermoelec. power rel. to Armco iron 0=13498
 thermoelectric power, effect of lattice defects 4=20435
 thermoelectricity meas. below 1°K 0=18076
 thermometer, resistance, film 4=24414
 thin foils, X-ray spectra fine structure "melting" 3=10973
 twins in vapour-grown f. c. c. whiskers 4=4527
 vacancies, thermal formation kinetics 4=1465
 vacancy quenching, diffusion 1=960
 vapour press., heat of sublimation, b.p. 2=5216
 wire, field ionization at surface 3=12067
 wires, emissivity meas., 100°-1000°C 3=24100
 wires, internal friction peaks, at low temps. 3=18166
 work function in O, var. press., γ -ray effects 4=8797
 X-ray L intensities 1=13951
 X-ray L spectrum, emission 2=6588
 X-ray spectrum forbidden transition 1=3513
 D in introduction into metal 2=13606
 H₂ adsorption 0=4748
 Pt films, damage due to irradiation 1=3700
 Pt-C films, for electron-microscope shadowing 2=23946
 Pt-Al₂O₃-Al films, tunnel electron emission 2=13579
 Pt-Au system, Kirkendall effect and diffusion 1=14312-13
 Pt¹⁹⁴⁻¹⁹⁶ atoms, isotopic shift 4=12346
 Pt¹⁹⁵ n.m.r. in Pt metal 3=23255
 Pt¹⁹⁵ in powder, n.m. relax. and Knight shift, 20°-290°K 3=3201
 Pt¹⁹⁵, strength fn., neutron scatt., calc. 4=28036
 Pt-C shadowing deposits, study of background structure 0=18421

Platinum compounds
 alloys, dilute, with Co, Fe, Ni, or Mn, magnetic transitions 3=992
 alloys, vacancy-impurity binding energies 3=8424
 complexes with aromatic amines, bond i.r. spectra 4=25715
 magnetic susceptibilities and g-values 1=10128
 phthalocyanate, crystal lattice structure, electron microscope examination 1=9142
 platinocyanides, luminescence, photovoltaic effect, and non-monomolecular processes 3=18030
 superconductivity 3=24148
 trans-[Pt(C₂H₄)(NH(CH₃)₂Cl₂)]₂, crystal structure 0=8235
 Pt alloys, low temp. thermoelec. 2=6508
 Pt complexes, transmission of electronic effects through the heavy metal atom 1=869
 Pt-dimethyl-glyoxime, structure 0=3252
 Pt ethanolamine compounds, luminescence 1=3855

Platinum compounds—contd

- Pt hexabromo-complexes, (Br⁸⁰)₆ separation 2=17101
 Pt phthalocyanine, molec. disarray caused by fission fragment 1=19817
 Pt(II) nitrohalides, i.r. absorpt. spectra 2=18842
 Pt-Ag, effect of spark discharges on structure 0=16352
 Pt-Al, phases, 3 new, crystal struct. 4=23286
 Pt-Al₂O₃, catalyst, surface structure, 300° to 1300°C 3=18367
 Pt-Au alloy, mag. susceptibility and electronic sp. ht. 4=28780
 Pt-Au, props. and energy-band structure 1=1441
 Pt¹⁹⁵-Au, Ir solid solns., n. m. r. decay osc., and coupling meas. 4=13350
 PtBi, crystal lattice structure 3=18332
 PtBi₂, crystal lattice structure 3=18332
 PtBr⁸, mol. vibr. calc., from Raman spectra 4=9738
 Pt-C, form of graphite crystals 0=18407
 Pt-C, phase structr. by electron diffraction 3=1370
 Pt-C system, e. s. r. study of spin/gram and isotopic activity 4=30902
 [Pt((C₂H₅)₃P)₂HBr], crystal structure 0=8236
 PtCl₄²⁻, mean amplitudes of vibr. from Raman freqs. 4=15318
 Pt-Co alloys, thermodynamic props., 1200-1400°C 4=23237
 Pt-Co, magnetic domain structure 1=14709
 Pt cobaltite- and pyrite-type compounds, superconductivity, > 1°K, semiconductivity 3=21663
 Pt₃Co, slip 0=21112
 Pt, with Cu, Sn or Fe, thermoelec. power at low temps. 1=3796
 PtCuZn₃, structure 1=5098
 PtF₆, hindered mol. rot. in liq. and solid phases 2=8077
 Pt-Fe alloys, thermoelec. power at ≈ 1°K, rel. to refrigeration 2=22105
 Pt-Fe, mag. structure rel. to chem. order 3=8696
 Pt₃Fe, superlattice struct., stability 2=6832
 Pt₃Fe, thermal spikes, size meas. 3=22853
 Pt₃Fe, unit cell dimensions 3=25745
 Pt₃Ga, structure 1=5099
 Pt₃Ga₇, structure 1=5098
 PtGe₂, structure 1=5098
 Pt₂Ge₃, structure 1=5098
 PtGe, structure 1=5099
 PtH electronic-band spectra, by exploding wire method 4=25635
 Pt-Ir, electrical contacts, metal migration 3=9690
 Pt-Ir alloy, mag. susceptibility and electronic sp. ht. 4=28780
 Pt-Ir, props. and energy-band structure 1=1441
 Pt-Mo alloys, phase study 2=23880
 Pt(NH₃)₄CuCl₄, single-crystal structure 1=4056
 Pt-Pd alloys, absorption of H and D, lattice const. 4=26720
 Pt-Rh wires, emissivity meas., 100-1000°C 3=24100
 α-[Pt₂(SCN)₂Cl₂(P(C₂H₅)₃)₂], crystal structure 0=8237
 Pt-Se, elec. resist., temp. depend. 0=10282
 PtS and PtTe, low temp. heat capacities 1=19717
 PtS₂ and PtTe₂, low temp. heat capacities 1=19718
 Pt₃Si, structure 1=5099
 PtSn₂, n.m.r., Knight shift 2=6706
 PtSn₄, Pt¹⁹⁵ resonance Knight shift 3=5051
 Pt-10% Rh wires, emissivity 2=1306
 Pt-W alloys, use (over 340°C) for strain gauges 3=6771
 Pt-W, magnetoresistance, 1.2-4.2°K 2=23069
 Pt-W, superconductivity 3=3962
 Pt-W technical alloys, hardness 2=23793
 Pt-W-Cu, tests for high-temperature strain gauges 3=11747

Pleochroism

- alkali halide crystals, electron irradi., coloration depth 0=13550
 amethyst 2=18800
 aniline hydrobromide, u.v. absorpt. 3=4965
 aniline hydroiodide, u.v. absorpt. 3=4965
 azobenzene crystals, dichroic ratio 2=18816
 biotites, effect of heat 0=13666
 calcium fluorophosphate, dichroic colour centres 1=7600
 circular dichroism, photoelectric measurement 1=10609
 complexes of trigonal symm., model and data analysis 4=12419
 di, measurement, sensitive, down to 1850 Å 4=16256
 dichroism, CdS, ZnS mixed crystals, spectrum 2=6552, 10596

Pleochroism—contd

- dichroism, circular, in optically-active crystals. 2=8485
 dichroism, circular, qualitative theory 0=18111
 dichroism, electric, use in meas. of molecular moments 1=14118
 dichroism, KCl, A-centre reorientation obs. 2=607
 dichroism, KCl:Sr, Z-bands 1=8918
 dichroism, KCl, Z, and F bands 1=11243
 dichroism, in light scattering of suspensions and solutions 0=939
 dichroism, liq. crystals., rel. to degree of order 2=49
 dichroism, in mol. crystals, effect on luminesc. 2=10614
 dichroism, NaCl: Sr, Z-bands, 1=8918
 dichroism, optically active crystals, exciton absorpt. region 2=18808
 dichroism, particle system with 3 energy levels, incident radiation intensity depend. 0=16075
 dichroism, polymers, axially oriented, in i.r. 0=6166
 dichroism, pp'-azoxyanisol, rel. to order 2=49
 dichroism, sheet polarizers, advances 2=9410
 dichroism, soln. of polar mols. 2=20780
 dyes in films, di, on polarized light irradi. 4=17586
 minerals; colour change meas. rel. to orientation 3=922
 mono-, di- and tri-ethanolamine complexes of Fe, Ni and Cu, dichroism 0=13693
 moscovite, i.r. 3=13164
 orientation dichroism in viscous solns. 4=29629
 polarization, dichroism 3=18017
 polyethylene, oriented crystalline 1=14608
 polymers, helical, unusual circular dichroism curve 4=17327
 polystyrene, dichroism, in terms of orientation functions 1=10093
 quartz, coloured, synthetic 3=17987
 ruby, dichroism, circular, microwave modulation 1=1149
 solutions, viscous, photodichroism, reversible 3=16625
 3-methylpentane-isopentane solutions, dichroism 4=14167
 topaz (blue), expt. and theory 2=4129
 viscous solns. of complex organic cpds., reversible orientation 3=23881
 BaTiO₃, dichroism 0=2932
 CaF₂:Eu²⁺(0.01%) crystal, dichroism, 4.2°K, > 10 kOe 3=17983
 CdSb, i.r. meas. 3=923
 Co III complexes, circular dichroism 4=22398
 [Co(NH₃)₆]Cl₃, microspectrophotometric study 2=18825
 CsBr, F centre, mag. 4=25971
 CsBr and first excited state, spin-orbit splitting 4=28499
 CsCl, F centre, mag. 4=25971
 Ge containing O, i. r. absorpt. band, dominant, stress-induced dichroism 4=28485
 KCl, dichroism of M band 0=17964
 KCl, dichroism of N₁ band 2=18620
 KCl, K-centres, dichroism 2=18618
 KCl:LiCl, A-centre, dichroism meas. 3=17794
 KCl:OH, additively coloured, dichroism 2=10419
 KCuCl₃ and NH₄CuCl₃, 3=18314
 Mg(Ni)F₂, and mag. dipole transitions 3=19993
 Na uranyl acetate, circular dichroism 2=16804
 NaNO₃, dichroism, in u. v. and i. r. 4=13057
 O₂¹⁶ mol., in dipole transition, rel. to parity 2=16517
 Pt hexahalide complexes, electron transfer spectra 0=20650
 Si containing O, i. r. absorpt. band, dominant, stress-induced dichroism 4=28485
 Si, n-type, magnetodichroism 4=1712
 Zn_xCd_{1-x}Sb, i. r. meas. 3=923

Plutonium

- air contamination filters, background α-discrim. 4=9429
 in the air, det. using α-β coincidence method on air filters 1=7332
 allotropic transformations 0=21226
 α-phase, elec. cond. > 300°K 2=23237
 assay in process wastes, by γ-monitor 3=21021
 atom, hyperfine and isotopic structure 3=15290
 atomic scatt. factor for X-rays 2=15010
 conductivity, elec., α-Pu low temp. var. anisotropy 4=20335
 conductivity, elec., β phase, 5-425°K 4=6930
 conductivity, elec., low temps., high press. 4=15522
 conductivity, elec., self-irradiation effects 4=22680
 conductivity, elec., temp. var. down to liquid He temps. 4=6918

Plutonium—contd

- crystal face angles, α Pu 4=7533
 crystal imperfections due to self irradiation, saturation 4=12834
 crystal structure, α and β forms 3=25706
 crystal structure, atomic, < 50°K, absence of phase transform. 3=20833
 diffusion, in Al, 600°K 1=17561
 diffusion in Mg 4=1517
 elastic fatigue limit 4=7449
 elastic (Young's) modulus, 4.2-300°K, and mag. transition ~ 55°K 3=20691
 elec. resist. anomaly, interband scatt. theory 2=6412
 elec. resist. rel. to self. irradiat. 2=23238
 elec. and thermal props. rel. to order-disorder change 1=20622
 electronic structure and props. 2=23105
 evaporation by fission fragments 0=5812
 ground state from atomic spectrum analysis 1=8817
 h.f.s. and electron levels 0=7700
 Hall effect of α and δ phases 2=625
 Hall effect in α -phase, 78°-388°K 3=17824
 heat capacity, effect of self-induced radiation damage 2=23076
 lattice structure and thermal expansion, δ and η 4=7638
 metallurgy, conference 1=7871
 monitor, continuous, for airborne particles 0=5456
 neutron diff. nucleon coherent scatt. 2=10832
 phase diagram, triple points to 35 kbar 4=2001
 phase transformation, α - δ , corresp. matrix 4=4511
 pure and stabilized, substruct. metallography 4=29165
 radioactive heat generation rate in metal 2=20572
 use in radioactive ionization gauge 4=16158
 resistivity at 0.75°K 0=1084
 self-damage accumulation 3=22856
 self-irradiation and annealing 4=1537
 specific heat from room temp. to melting point 4=9849
 spectrum, arc, ground-state multiplet 3=6354
 spectrum, ground-state multiplets, arc, calc. 4=1213
 spectrum in 1.6-2.1 μ region 1=811
 structure rel. to anisotropic thermal expansion 3=10606
 thermal diffusivity determ. 4=17443
 thermoelec. power, 20°K-room temp. 2=12552
 thermoelectric power determination 0=18082
 thermo electric power rel. to temp. 4=17542
 thermoelectricity, temp. var. down to liquid He temps. 4=6918
 thin films prepn. for neutron cross-section meas. 3=11321
 utilization in nuclear reactors 4=17228
 X-ray emission spectrum 1=7718
 X-ray M absorpt. spectrum, and PuO 4=7146
 X-ray M-absorption spectrum 3=8610
 X-ray spectra 2=706
 X-ray spectra, h.f.s. 1=14615
 β -Pu, crystal structure 3=13448
 α Pu, dilatation and thermoelectric power at low temp. 4=15435
 α -Pu, mechanical props. in compression 3=25602
 δ -Pu, negative exp., effect of alloying 3=22669
 α -Pu, plastic deformation mechanisms 4=28973
 δ -Pu, self-diffusion coeff., 350°-440°K 4=22624
 δ -Pu, struct. 2=21510
 α -Pu, with and without Pu²³⁸, self-irrad. effects 4=22651
 Pu I, h.f.s. 4=9647
 Pu I second level system, new pair levels with Pu II and ionization potential 4=3798
 Pu²³⁸, absorption spectrum in La trichloride and La ethylsulphate 3=8601
 Pu²³⁸, electronic energy levels, theory and expt. 4=22310
 Pu²³⁹ as fuel for fast reactor 3=22458
 Pu²³⁹, h.f.s. and nuclear mag. moment 0=20589
 Pu²³⁹, mass 0=15669
 Pu²³⁹, optical h.f.s. and magnetic moment 3=15289
 Pu²³⁹, reactivity change on high irradiation 1=19566
 Pu²³⁹, reson. neutron absorpt. 2=3628
 Pu²³⁹, spins of neutron reson. 2=7992
 Pu²³⁹ in the trichloride, e.s.r. 2=4267
 Pu²³⁹⁻⁴¹ as fuels in thermal reactor 3=22459
 Pu^{239,241}, nuclear magnetic moment 3=2363
 Pu²⁴⁰ isotope mass 1=19611
 Pu²⁴⁰ in Pu-Al rods, resonance integral 4=3740
 Pu²⁴¹, magnetic moment, spectroscopic detm. 4=1214

Plutonium compounds

- absorption spectra 0=20656
 nitrides and sulphides, review of phys. chem. props. 3=16473
 perovskite-type, structure 1=15097
 Pt(IV) and Th(IV) acetylacetonates, probable isomerism 0=8239
 δ - and ϵ -Pu alloys, lattice parameters 4=29129
 Pu alloys, unusual resistance behaviour 4=17542
 Pu carbides, props. (nuclear engng. data sheet) 1=4168
 Pu hexafluoride, vapour press. anomalies 2=8077
 Pu(IV) hexahalide solns., spectra, electron transfer and 5f \rightarrow 6f transitions 4=5186
 Pu oxalates, decomp. by own α -particles 0=4735
 Pu-Al alloys, mechanical props. 4=13440
 Pu-Al, δ -phase, elec. behaviour 2=21094
 Pu-Al(5%) crystal lattice dilation at 100°K not in 8% Al 4=26668
 Pu-Al, self-irradiation and annealing 4=1537
 Pu-Be neutron source, spectrum 2=5645
 PuC, heat capacity, enthalpy and entropy, from 400°-1300°K 4=22495
 Pu-C, < 50 at % C, phase diagram, 500-1500°K 4=7508
 PuC, 42-60 at % C, prepn., props. 3=10431
 PuC, resistivity and thermoelectric power 4=4175
 Pu₂C₃, radiation self-damage 2=23172
 Pu-Ce alloys, mechanical props. 4=13440
 Pu-Ce, δ -phase, elec. behaviour 2=21094
 Pu-Ce, phase diagram 4=29802
 Pu₃Co, crystal structure 4=4620
 PuD₃₋₇₄, ferro or ferrimag. props. 3=15783
 Pu-Eu mixed oxide system, crystal structure, atomic, and phase transformations 4=7605
 PuF₃, free energy of formation 0=12101
 Pu-Fe alloy, electron beam microanalysis 2=4516
 Pu-Ga system, phase equilibrium diagram 4=29015
 PuGe₂, ferromagnetic props. 0=11834
 PuH₂, identification, rel. to H in Pu substruct. 4=29165
 PuH₂₋₇₄, ferro or ferrimag. props. 3=15783
 PuNi, crystal structure 0=3222
 PuNi, crystal structure, rel. to similar types 3=18338
 Pu-O system, phase diagram, crystallographic, thermodynamic and physical props. 4=29016
 PuO_{1.7-2.0}, semiconducting props., thermoelectricity, activation energy 4=12908
 PuO₂, characteristic temp., from X-ray diffraction spectra 0=17898
 PuO₂, neutron sources from Be reduction 0=7379
 PuO₂, radiation self-damage 2=23172
 PuO₂ specific heat, low temps. 4=6747
 PuO₂, X-ray M absorpt. spectrum, and Pu 4=7146
 Pu₃Ru, crystal structure 4=10504
 Pu₃Ru₃, crystal structure 4=10504
 Pu₃Si₃, crystal structure 4=26669
 Pu-Ti alloys, $\beta \rightarrow \alpha$ transformation kinetics 4=29017
 Pu-U System 0=8276
 Pu-Zn, δ -phase, elec. behaviour 2=21094
 Pu-Zn system, phase diagram 4=29018

Polarimeters

- Arago compensator, comprising compensating glass plates 1=18620
 astronomical, instrumental effects 3=7019
 astronomical, sensitivity improvement 2=17272
 automatic, using an ADP polarization modulator 4=24397
 circular dichroism measurement in visible and u.v. 1=2894
 double-beam, photoelectric, 0.2-1.2 μ m 3=9625
 ellipsometry, for optical props. of films and surfaces 3=24062
 for γ -rays, high energy 3=14937
 highly-scatt. solutions, meas. methods 3=16807
 i.r. polariscope 0=180
 i.r., review 0=6952
 interference polarizers, multilayer, for u.v. region 3=19027
 light source for polariscope, large-field diffused dual source 4=18397
 liquids, dipolar, electro-optical effect meas. 2=17656
 magneto-optical effects meas., Kerr and Faraday coeffs. ferromagnetic metals 3=14376
 microwave, for solar emission 0=16524
 modulator of polarized light 3=14378

Polarimeters—contd

- multichannel, automatic, for extended source 4=331
- phase difference meas., use of phase plates 3=14380
- photoelec. analyser 2=15749
- photoelec., high sensitive, using new type of modulator 1=18623
- photoelectric, using ADP modulator 4=17552
- photoelectric, using ADP polarization modulator 1=10605-6
- photoelec., using ADP polarization modulator 2=2899, 2900
- photoelectric, with birefringence compensator 4=14402
- photoelectric, for Faraday effect 0=1047
- photoelectric meas. of optical rotation 0=19457
- photoelectric, with rotating phase plate 1=2893
- photoelectric, simple, compensating 0=5184
- photoelectric, for skylight, 3000-6500 Å 3=19028
- polariscope, imperfect circular, theory 3=1836
- polarizer for far i.r. 0=6953
- quarter-wave plate, composite, theory 3=9627
- quarter wave plate interference errors 4=16255
- quartz, circular, for i.r. work, design calcs. 2=17654
- retardation meter, with ADP polarization modulator, for automatic polarimetry 4=14400
- rotation measurement, photo-electric 3=5534
- scattered light photoelastic polariscope, rel. to stress analysis 4=24398
- Senarmont, analysis of optical-maser light 3=21570
- sheet polarizers, for u.v. 3=5532
- single cavity, for 3 cm band 1=3061
- solar radio, operating at 74 Mc/s 4=15952
- solar, spectral, 2-4 Gec/s 3=11491
- solar spectrum, photoelec. method 4=4907
- solutions at high press., rotation meas. 4=29631
- spectro. automatic recording 4=14399
- spectro-, use of Glan prisms 4=18391
- spectro, also for monochromatic meas. 4=24395
- spectrofluorimeter, automatic recording 4=14401
- spectropolarimeter, for Faraday effect meas. 3=19026
- spectropolarimeter, photoelec. 2=2902
- spectropolarimeter, 220-600 m μ 1=1834
- spectropolarimetry, instrument problems 3=16806
- stellar polarigraph, Öhman 0=6548
- 2-channel photoelec., for astrophysical and atmospheric optics 0=18590
- u.v. use of synthetic quartz crystals. 2=7411
- for visible, u.v., design, construction, performance 3=3894

Polarized light

- See also Double refraction; Optical rotation; Photoelasticity; Polarimeters.
- absorption, anisotropy, calc., aggregate of dipoles 4=322
- absorption, in ferromagnetics 0=6171-3
- analysis, photoelec. device 2=15749
- analysis, plane and elliptical, 0.2-1.2 μ m 3=9625
- anisotropic light scattering of streaming suspensions and solutions 0=939
- anthracene, luminescence, under 313 m μ light and β -radiation 1=20025
- Arend-Roland comet, head and tail polarization 2=9066
- atmospheric polarization, data 0=12202
- due to atmospheric scattering, wavelength dependence 4=15872
- in atomic system, rot. of plane of polarization with parity nonconservation 2=512, 22892
- auroral oxygen emission line, polarization 1=6638
- azobenzene crystals, polarization of spectra 2=18816
- Babinet compensator, phase difference meas. with increased accuracy 0=14854
- biaxial crystals, plane-wave polarization and optic axes 0=179
- birefringent crystal section, retardation determ. method 4=28665
- at boundary of two media 2=5476
- Brewster's angle, apparatus for determination 3=11942
- circular, action of alternating mag. field 2=5191
- circular dichroism measurement in visible and u.v. 1=2894
- coherence props. 0=146
- collimated beam through retardation plates, matrix calculus 2=7410
- comets, polarization measurements 0=18728
- conical analyser, props. and uses 0=5185
- corner, reflectors and cavities, polarization props. 2=5190

Polarized light—contd

- correlation between photons in partially polarized beams, meas. method 1=4482
- crystal plate transmission 2=15750
- crystal plates, uniaxial optically active, passage of light 2=19731
- crystalline plates, parallel or convergent light 0=2243
- in crystals, magnetic, e.m. plane wave 0=3651-2
- in crystals, molecular theory 2=6542
- crystals, second harmonic generation of light 3=1839
- cuprous oxide, complex refr. 2=6545, 8482
- day sky, elliptical polarization 2=876
- definition as anisotropy, appl. to luminescence and dichroism 3=18017
- depolarization, fluorescent organic solns., by Brownian motion and molec. vibr. 1=2760
- depolarization of light dispersed by macromolec. solns., theory 0=940
- depolarization in medium with Rayleigh scattering 0=8809
- detectors, square-law, correl. of outputs 2=1242
- dichroic film for visible and u.v. 2=1282
- dielectric, nonlinear polarization, perturb. calc. 4=17548
- in diffracted light from gratings 2=22056
- diffraction by grating, spectral distribution 1=13000
- and diffraction gratings 4=27334
- diffraction at slit, approximation method calc. 1=18614
- distance meas. (50m) with modulated ray 2=1101
- durene crystal green emission 3=23114
- dust nebulae scattered 4=29406
- edge emission of SiC 0=8012-13
- effect on dyes in films, dichroisimprod. 4=17586
- effect of transit through several polarizing media 2=1281
- effects on anomalous photocurrents and photovoltages in ZnS 0=2907
- effects on photo-emission from compound photo-cathodes 0=19722
- elastic medium, direction azimuths 4=27340
- from electron excited He atoms 0=4173
- ellipsometry, fundamental eqn. for surface and film 4=18435
- elliptical, analysis in quarter wave plates, interference errors 4=16255
- elliptical, use for metal surfaces study 3=14357
- elliptical polarization, transform. into linear 2=22064
- elliptically, analysis 0=14855
- ellipticity correl. with rotation in e.s.r. 4=20096
- Faraday rotation in atomic spin system, theory 3=22489
- Faraday rotation, general expression 4=7102
- filament connecting 2 galaxies, polarization 3=7039
- films, rel. to complex refr. index and thickness 4=24379
- fog formation from haze, optical effects 4=7838
- Fraunhofer lines, photoelec. meas. 3=270
- by gases, effect of elec. and mag. fields 1=15957
- gases, Rayleigh scatt., meas. 4=242
- glass surfaces, frosted, polarizing properties rel. to reflection 4=20458
- grating, echelette, refl. power 2=22058
- gravitational-field rotation of polarization plane 0=10568
- half and quarter-wave plate testing, using iceland spar rhomb 4=330
- i.r. from clear sky 1=9184
- i.r., use in experiments requiring strict plane polarization 1=18621
- i.r., use in magneto-optical semiconductor effects 3=14377
- i.r. polarizer using germanium 0=1045
- i.r., prod. 3=18990
- i.r., prod. by double reflection on Ge 4=5400
- i.r., prod. by reflection from Ge 4=5401
- i.r., Se mirror polarizer 3=24060
- image positron meas. by polarimetry 3=21572
- instrumental effects, theory and practice 4=8459
- intensity fluctuations in partly polarized light 3=23994
- intensity det. by photoelec. method 0=177
- interference, for contrast transmission function meas. 3=21522
- interference, Norrenberg colour sequences computer calc. 4=24391
- interference phenomena, absorbing biaxial crystals 0=2244
- interference in thin films, rel. to cryst. defects 2=10580
- interplanetary matter, rel. to models 2=11105
- interstellar, relation behaviour extinction and polarization 0=19458

Polarized light—contd

Krishnan effect 2=9409
 laser, He-Ne, in mag. fld. 4=14937
 lattices, polarization ratio at 90° 4=4716
 light propagation in absorbing crystals 0=1046
 light scattered outwards from earth and overlying aerosol 4=17893
 light scattered by soot particles on prism 0=14856
 luminescence polarization, rel. to decay 1=16123
 luminescence from stilbene and tolane 0=656
 luminescence of system with three energy levels 0=16075
 from lunar surface 1=18028
 Lyot filter, review 2=22047
 magnetic rotation, obs. by optically-dense dispersive media 3=10911
 matrix formulation of theory of partial polarization 0=12675
 matrix representation 2=15751
 metal surfaces, incandescent, emission theory 1=18622
 mica, optical angle meas. 1=10584
 microscopy, review 4=2823
 modulation and demodulation, in optical communication system 4=11368
 modulation of light for visual signal generator 1=4451
 modulation by rotating inclined isotropic film 4=8458
 monochromators used in polarimetry 0=16901
 naphthalenes, D-substituted, Rashba effect 4=1714
 night-sky spectrum, emission lines 2=911
 from noctilucent clouds 0=6484, 14290
 from oil film on metal, for thickness meas. 4=16087
 optical activity and intermolecular interactions in liquids and solutions 0=3542
 optical const. meas. of films on glass 2=15736
 optical films, extreme value method for const. 4=24378
 optical vibrations in diatomic polar crystals 0=7989
 organic molecules, limiting polarization symmetry rel. to electronic transitions 3=2635
 partial polarization, polychromatic light 3=21573-4
 partially coherent quasi-monochromatic, interference 3=11931
 perylene, luminescence, dispersed in n-heptane, electric field effects, 77°K 3=18043
 phase difference meas., use of phase plates 3=14380
 in photoelasticity, equations using cycle ellipses 4=14406
 photoelec. det. of extinction directions 0=5186
 photoelec. meas. by ADP modulator, servo-system 2=17651
 photoelec., study with electron image converter 2=7647
 photoelectric analysis 4=5402
 photoelectric meas. by ADP modulator 3=16808
 photoelectric meas. by ADP modulator 4=17552
 photoelectron emission, effects on 1=18921
 photographic demonstration, book 3=257
 in photon correlation 0=10745
 pile-of-plates polarizer, transmitted component 4=29774
 from plane wave composition 3=1838
 plasma, magneto-optical effect 2=1450
 polarimeter, Waterman's precision 3=1837
 polarimetric method for optical const. of metals 3=11943
 polarization function for air scattering volume 4=15871
 polarization and intensity rel. to properties of medium at large depths 4=11367
 polarization, macroscopic, nonlinear in Maxwell's eqns. in dielec. 2=19665
 polarization of scattered light, study by spherical harmonics 1=16117
 polarized components in ordinary light, meas. 1=18619
 polarized for i.r., reflection type 1=4481
 polarizers and retardation plates 1=11846
 polarizers of visible light, performance limits 2=13463
 polyethylene, scattering under dynamic conditions 3=10914
 polymer films, optical retardation, continuous change meas. 1=19962
 polymer solns., emission anisotropy (polarization degree) rel. to viscosity 4=27178
 polystyrene solns., scatt., and anisotropy 4=8173
 prisms, polarizing, theory 4=14405
 privileged wave, from elec. induction and transverse field 4=16254
 prod. i.r., reflection from PbS layers, on glass prism 3=16810

Polarized light—contd

production, dichroic sheets, advances 2=9410
 production by echelette grating, $1-600\ \mu$ 0=8810
 production by echelette gratings in far i.r. 4=14403
 production, i.r. prod. of Se polarizers 2=17653
 production, i.r., with pyrolytic graphite foil 2=13462
 production, nonlinear dielec. mechanism 2=14650
 production by protons entering metal surfaces 0=20099
 production by synthetic single cryst. 2=16799
 production, u.v. to i.r., double prism 4=24396
 production, use of films in polarizing systems 1=1823
 $\lambda/4$ wave compensator, calibration 0=14855
 quarter-wave stacks, degree of polarization 2=121
 radiation from He due to electron impact 3=4719
 Rayleigh scatt. from thin layer, effect on 3=1835
 in reflection from crystals, orthogonal polarization directions 0=12497
 reflection from multilayers, ellipsometry theory 2=17652
 reflection prod., 900-1200 Å 4=14404
 reflection and refraction in optically-active media 1=13002
 refraction and reflection teaching expts. 3=19029
 retardation plate 3=14379
 retardation plate, variable, for visible and u.v. 3=21571
 retardation plates, exact theory 4=27341
 ruby laser beam 4=11369
 ruby laser emission, photographed exit face 2=4125
 from ruby laser faces 3=14336
 scattered by gases, depolarization, from laser 4=21186
 in scattered visible and i.r. radiation from clouds and hazes 4=13793
 scattering by colloidal spheres 0=2255
 from scattering by colloidal spheres 4=14398
 sea, spatial distrib. of polariz. 3=16200
 second harmonic generation, in II piezoelectric crystals, by laser beams 4=28666
 self-excitation of metal coated, plane-parallel crystalline layer 3=23031
 Senarmont compensator, $\lambda/4$ plate error and polychromatism 4=16257
 Senarmont compensators, inexact, use 3=16809
 sheet polarizers, for u.v. 3=5532
 sky light, percentage and direction 3=1447
 sky light, polarization by aerosols 1=20839
 sky radiation, influence of multiple scatt 2=878
 skylight polarization meas. 0=6483
 skylight during twilight 0=4804
 use for small rotation measurement 1=6818
 solar corona emission lines 1=18088
 solar coronal streamers 2=969
 spectra recording, accessory for Beckman DK spectro-photometer 4=14370
 in spectrophotometer, prism-grating, transmittance 4=16233
 starlight, by helical magnetic field 1=15507
 starlight in interstellar medium 4=26924
 starlight from near stars 0=6611
 starlight, origin of polarization 1=15506
 starlight, polarization by oriented nonspherical particles 4=15915
 from stars 4=2386
 from stars, measurement, instrument polarization effects 0=1
 stellar atmospheric spectra 2=2545
 stilbene, luminescence, under $313\ \text{m}\mu$ light and β -radiation 1=20025
 Stokes parameters, deduction of optical constants of reflector 1=13001
 stress analysis, elliptical 3=23813
 sunlight, reflected from sea surface 3=9626
 sunlight, from sunspot vicinity, tests for polarization 1=1639
 from sunspots 0=4893
 from sunspots 1=2615
 superposed crystal plates between crossed polars, special case, and applications 0=3653
 technique for revealing surface orientations of suitably etched crystals 1=1364
 for temperature meas. 4=18462
 thermal emission from W 2=122
 by thin magnetized films 1=1230
 transmission through pair of birefr. plates 4=24399
 uniaxial optically active crystals 2=22066

Polarized light—contd

- Vavilov—Cherenkov radn. in biaxial crystals 3=3895
 by water droplets, microscopic obs. 0=19453
 wavelength dependence and ratio to absorption 3=24061
 wire grid as near i.r. polarizer 0=14852
 Wollaston prism, as beam splitter, for shearing interferometer 1=2880
 to 1900 Å by calcite 4=8457
 Al grating, uncoated, extreme u.v. refl. 3=14375
 Al mirrors 0=178
 As₂Se₃, polarization in films 2=18692
 Ba layers on W, effect on photoelectric emission 4=8810
 CdS, absorpt. edge, high-press. shift, investigation 2=2225
 CdS absorpt. spectrum, i.r., effects 2=8533
 in CdS, reflection and emission 1=10090
 Cs₂O and Cs₃Sb cathodes, effects on photo-emission 1=18912
 GaAs laser diode, var. regions, var. thresholds 4=24916
 H₂O, emissivity, i. r., calc. 4=24217
 He atoms, electron-induced radiation 4=25484
 He atoms excited by electrons, meas. 3=8209
 He, electron-impact induced 4=25531
 He, excited by electrons 2=20742
 He—Ne laser in weak long. mag. field 4=21678
 NaNO₂:Ti, polarization of low temp. luminesc. 2=715
 from Re films, on Si, thermal emission 3=17980
 Se foil polarizer, interference effect 0=10787
 Se polarizers for near i.r. region 0=14853
 Se, thin films, study 0=20970
 ZnS monocrystals, polarization of luminescence 0=16093
 in ZnS, reflection and emission 1=10090

Polarography

See Chemical analysis, electrochemical.

Polishing

See Surface texture.

Polonium

- atomic g_f factor, atomic-beam meas. 2=347
 h.f.s. of atomic ground state, atomic-beam meas. 2=523
 vapour pressure at room temp. 1=1850
 Po²¹⁰, α -particle energy 2=22808
 Po—Be neutron source intensity rel. to γ -ray dose 2=22539
 Po²¹⁰(ThA) ion mobility in air, Zeleny's method, two groups 4=5561

Polonium compounds

(Heading introduced in 1962)

- Po chloride, aq., α -emission, surface effects 2=17453
 Po—Be neutron spectrum, scintillation spectrometers 4=27864
 Po—Li neutron source, n- γ coincidences 3=590

Polymerization

- acetylene and benzene in gas phase, radiation-induced 0=6418
 acetylene, catalysis by ion exchange resins 4=7759
 acetylene, Cl induced, initial stages 2=8910
 acetylene, in shock waves 1=11618
 acrylamide, radiation-induced in solid 0=14135
 acrylonitrile and vinyl acetate, effect of ionising radiations 3=6925
 alkali chlorides, heats of dimerization 1=2356
 aromatic hydrocarbons, in soln., excimer fluoresc. 2=11376
 average degree, for random scission processes 3=10560
 biological macromols. on templates, kinetics 3=25995
 butadiene, with Li, Na, K, in solns., spectra 4=25796
 1,3 butadiene, photopolymerization during photolysis 4=17868
 copolymer, sequence, study by light scattering 3=18443
 copolymerization mathematics 2=2449
 copolymerization statistics, matrix formulation 2=14343
 copolymers, multicomponent, composition distrib. 3=8956
 cyanogen, transient species in radiolytic polymerization 0=21291
 depolymerization, organic cpds., various solvents. n.m.r. study 2=1168
 ethyl acrylate, γ -ray induced, n.m.r. study 0=1516
 free radicals, redox, e.s.r. detection 4=22437
 graft radiation-induced polymerization 3=8959
 homogeneous ionic, mechanism, diastereosequence distrib. 3=11343
 isoprene, with Li, Na, K, in solns., spectra 4=25796

Polymerization—contd

- kinetics, mol. wt. distrib. and reaction sequence 1=20734
 Markov chains, anal. of copolymerization 4=3947
 in molecular beams, mass spectrometer obs., van de Waals force mechanism 4=6666
 nonstationary, molecular mass distribution 4=28294
 n-di- and N-phenylmethacrylamide, electron microscope obs., crystal shapes 4=15842
 photopolymer film, visible latent image prodn. 3=5538
 polycondensation, non-random, statistics of substitution effect 4=17863
 polyvinyl sulphate alkali halides, rel. to sedimentation and viscosity 2=11367
 in radiation chemistry, review 2=4554
 radiation-induced, chemical kinetics 1=20767
 radiation-induced, in solid state, literature survey 2=23970
 redox, free radical e.s.r. study 4=9786
 redox, 17 transient radicals, e. s. r. meas. and steric structure 4=28275
 saturated hydrocarbons, props. of positive ions 1=20766
 sodium acrylate, electron microscope obs., crystal shapes 4=15842
 statistics of irreversible termination 4=7751
 styrene, with Li, Na, K, in solns., spectra 4=25796
 styrene, photo-sensitized by anthracene 0=8316-17
 rel. to theory of numbers 1=15164
 trioxane, growth, BF₃ catalyst 4=23659
 vinyl, proton mag. relax. study of process 2=23960
 vinyl cpds, correl. frequencies and activation energies of molec. motion 3=23545
 water—gelatine[silica gel], rel. to long and short n. m. relax. time 4=28263
 zodiacal light 1=2609
 BeCl₂, in conc. aq. soln., Raman data 3=9463
 BeF₂, in conc. aq. soln., Raman data 3=9463
 CO₂, polymeric ions (CO₂)_n⁺, (n ≤ 23) 1=9960
 Mn(OH)₂, and γ dioxide formation 4=26657
 S, equilibrium, effect of pressure 4=2152
 Se liq., effect of press. (up to 4 kbar) from viscosity meas. 4=25793
 TiCl₄ vapour, monomer to dimer 4=24448
 ZnBr₂, dimerization of vapour 4=11413
 ZnCl₄, dimerization of vapour 4=11413

Polymers

 acetylene polymers, semicond. props. 2=23371
 acrylic esters, dielec. props., effect of adsorbed water 2=16767
 acrylic and methacrylic ester with styrene copolymers, C = O stretching vibr. 4=12550
 acrylic and methylacrylic esters, carbonyl group i.r. absorption band 4=20142
 acrylonitrile, knitted, triboelectric properties 1=17859
 adhesion to high-molecular substrates 4=7401
 adhesion, investigation diffusion processes 0=3162
 adhesion, luminescence diffusion study 4=4455
 adhesion to other polymers and to glass 2=10775
 adsorption—flocculation reaction with colloid 3=6891
 alkathene 7, electric strength, var. with thickness 3=13125
 amorphous, molecular weight detm. 3=20039
 amorphous, 6 specimens, creep, at high stress 0=16217
 in amorphous substance, dielectric polarization, theory 3=17928
 anionic, continuum distrib. model 4=3946
 arylene-alkyl, electronic—vibrational spectra 4=3886
 axially oriented, i.r. dichroism 0=6166
 bicoloids, order-disorder transitions 4=15851
 block copolymers, stress/strain relations 4=13395
 bond alternation and electron fixation 0=20699
 bonds, C—C, rupture energy differences, explanations 3=20038
 boundary friction and adsorption 2=21455
 branched, dimensions of chains with small excluded volume 4=17328
 breaking strength, temp.—time depend. 3=20732
 2n-butylbenzimidazole and benzotriazole in soln., association 2=19555
 n-butyl methacrylate, viscoelastic behaviour, rel. to glass polishing 4=10393

Polymers—contd

- butyl polymethylmethacrylates, diffusion, translation sedimentation, in solvents, meas. 3=9454
 $(-\text{CR}_2^{(n)}-\text{CR}_2^{(n)})$ type, Kerr constant 3=5437
 Capron fibres, tensile strength, rel. to double refraction 3=23045
 capron, tensile strength of fibres rel. to molec. wt. 3=16003
 carbon disulphide in crystals, Raman spectra meas. 4=30691
 cavitation, u.s. degradation of solns. 2=19558
 cellulose acetate in acetone, u.s. velo. 3=14161
 cellulose acetate, alkali-chloride doped, glass transition and ionic cond. 4=7735
 cellulose acetate, flow and deformation strain 1=20345
 cellulose (dry), elec. cond., temp. depend. 1=17632
 cellulose, illuminated, spectral and chemical changes 2=6891
 cellulose, water sorption and dielec. dispersion 2=6514
 chain configurations in solns., concentration dependence 1=6856
 chain dimensions, with interactions in adjacent monomers 0=9832
 chain folding in crystalline high polymers 0=520
 chain folding and free-energy density 0=18293
 chain fracture, rel. to intermolecular interaction 4=10397
 chain mols. in soln., temp. depend. of excluded volume 4=8175
 chain, unperturbed chain dimensions 0=5999
 chains, restricted, on diamond lattice 4=20143
 charged particle track visualization 4=3260
 chlorobutyl, internal energy losses, acoustic, var. cross-link density 4=13396
 chloropolvinyl, absorpt. current expression 2=10552
 p-chlorostyrene-styrene, dipole moments 0=9833
 coiling-type, models, Monte Carlo generation of nonintersection chains 2=23021
 compressibility, data for 42 high polymers, dynamic meas. 1=1295
 conc. solutions, entanglement effects from viscosity meas. 3=18809
 conc. solutions, interpretation of viscosity data 1=4334
 conductivity, elec., induced by γ -rays and neutrons, time var. 4=20402
 configuration and free energy of molecule with solvent interaction 1=7504
 configurational props. of random-flight chains in soln. and at interface 3=15404
 conformations of molecules in crystalline state 2=6816
 with conjugated bonds, 23 polymers, elec. cond., temp. depend. 1=3728
 construction, review 2=16574
 copolymer soln., light scattering 0=14851
 copolymers, dipole moment 0=9833
 cotton cellulose, crystallinity, X-ray determination 0=1918
 cross-linked, infinite network formation, statistical mechanics 3=25159
 cross linked temporarily, viscoelasticity theory 3=11309
 crosslinked, viscoelasticity theory 3=16125
 cross-linking 1=20766
 crosslinking, effective, of filled, rel. to swelling in solution 1=18400
 cross-linking by radiation, monomer effects 3=22618
 crystal formation, with folded chains, in dilute solns. 0=8160-1
 crystal formation, platelets, of const. thickness 0=8159
 crystal orientation correl., random-walk theory 4=7682
 crystal structure by detachment replication technique 3=20967
 crystal symmetry 1=14137
 crystalline, disorder due to mol. rotation 4=1331
 crystalline, first-order transition temp. 3=23495
 crystalline, Markoff chain model for mols. 2=12358
 crystalline, mol. chain dimensions 2=10929
 crystalline, molecular dimensions calc. 2=12357
 crystalline, optical and mech. anisotropy 3=917
 crystalline and paracrystalline order 3=11275
 crystalline ring structure, light scattering obs. 0=14053
 crystalline state morphology 2=23860
 crystalline synthetic high polymers with sterically regular structure 0=4668-77
 crystalline, thermodynamic stability, torsional vibrs. of chain molecules 2=23801

Polymers — contd

- crystallinity degree, X-ray determ. by absolute and relative methods 4=7681
 crystallite orientation, X-ray diffraction method 4=2012
 crystallization, crystallite models, equilibrium degrees 1=20406
 crystallization kinetics, effect of monocrystallizable components 2=6771
 crystallization kinetics obs., thermostat for polarizing microscope 4=21345
 crystallization, kinetics, study techniques 3=11234
 crystallization, non-classical spherulite theory 2=2361
 crystallization, sequence selection 3=11233
 crystallization, theory 1=20425
 cubic lattice model chain 2=2035
 deformation, heating and melting in high-speed friction 1=14897
 deformed network, orientation distrib. funcn. of statistical segments 4=23616
 deformed, submicroscopic porosity, exper. study 0=12065
 degradation by flash illumination 0=1962
 degradation, non-random, linear chain mols. 2=20896
 density-gradient centrifugation, mol. wt. and density distrib. 3=8323
 density meas., powders, errors in gradient column method 4=8011
 diallyl phthalate, rheological behaviour rel. to temp. 1=20346
 diastereosequence distrib. 3=11343
 dielec. loss data, d.c. meas. 2=16769
 dielec. loss in nonpolar polymers, theory 2=18763
 dielectric const. meas., complex, 1-100 c/s, bridge 3=19130
 dielectric constant, complex, meas. apparatus 3=3991
 dielectric losses, pressure and temp. dependence 0=2927
 dielectric meas., complex const., 1-100 c/s 4=419
 dielectric and mech. props. > 300°C 4=20410
 dielectric props., review 1=7681
 dielectric relax. meas., 10^{-2} c/s-300 Mc/s 4=18630
 dielectric relaxation at low temp. 1=7684
 dielectrics, conductivity, rel. to irradiation 3=20378
 diffusion of H, D, T, He 4=6877
 diffusion of impurities 0=3264
 diffusion and sedimentation theory, for 1, 2 and 3 branch points and rings 0=8657
 2,5-dihydroxy-p-benzoquinonato-Cu(II), electrical conductivity 1=8928
 1,6-dihydroxyphenazinato-Cu(II), electrical conductivity 1=8928
 dilute solutions, thermal diffusion, kinetic theory 0=19102
 dimensions in finite-conc. soln. 2=6242
 dimethyl-diphenyl siloxane, radiation effects. 1=11138
 dimethyl siloxane polymers, n.m.r. 0=10252
 diphenyl polymers, Raman spectra 4=6637
 dipole moments of polar polymers, rel. to configuration 1=3580
 dissociation, linear chain, influence of electronic coupling, erratum 3=8305
 double refraction, solns. flowing in a.c. + d.c. fields 4=18199
 dynamic mech. props. meas. in mid-audio range, 4°-300°K 3=3211
 e.m. wave propagation in two-component anisotropic systems, theory 2=4116
 effect of degree of polymerization of carrier on luminescence of scintillation 1=14649
 ebulliometry, design problems 0=6995
 elastic deformation, mechanism 1=20342
 elastic deformation, mechanism 2=8720
 elastic modulus meas., resonant flexure method 4=20678
 elasticity of networks cross-linked in states of strain 1=14867
 elec. conductivity, temp. dependence 0=563
 electric moments of linear polymers, deduction of molec. structure 1=8867
 electrical charges, appearance during deformation 3=20388
 electrical resist., rel. to sorbed water 2=6429
 electrolytes, acoustic propagation, u.s. 4=16108
 for electrolytic conc. cells, as semi-permeable membrane 4=26755
 electron emission, on tearing from base 3=24330

Polymers—contd

- electronic configuration, irreducible representations of spin double line groups 3=2683
 electro-optical effects, calc., rotational parameters, diagonalization 4=1332
 emission anisotropy (polarization degree) rel. to viscosity of soln. 4=27178
 equation of state for linear monolayers 3=11310
 equation of state, simple derivation 4=6682
 equations of state of liquids 4=11186
 ethyl cellulose in methyl alcohol, u.s. vels. 3=14161
 ethylene-o-phthalate, adsorption on glass powder, Al_2O_3 , var. with mol. rot. 4=10622
 excluded volume effect in polymer chains 3=12887
 exo-electron emission on plastic deformation 1=12590
 extrusion flow curves, thermorheological simplicity 1=14884
 ferromagnetism and antiferromagnetism, theory 2=732
 ferromagnetic properties, rel. to ferromag. impurities 3=20566
 fibres skin layers, microscopy, interference 4=13700
 fibrous struct. 2=4481
 fibrous structure 1=20654
 filaments, static electrification, dia. depend. 1=4549
 films, fine structure, electron microscope study 0=21220
 films, gas diffusion, linear free-energy relationship 3=2821
 films, growth on metal substrates, by electron bombardment 3=18266
 films, of mixed horizontally and vertically oriented cpds. 2=2424
 films, oriented, light scatt. 4=22836
 films, softening temp., thermomechanical curves 0=8261
 films under strain, light scattering by inhomogeneities 1=14624
 flat layers in contact with ice, sliding expts. 1=14932
 flexible linear molecules, adsorption theory 3=15405
 fluorescence, common features 2=12632
 flow, non-Newtonian, extension of Eyring-Ree theory 1=18367
 fluorescence, energy transfer study 1=6864
 fracture cracks, development, features 1=11519
 fracture cracks, development, features 1=12605
 fracture, film colour phenomena 4=10398
 fracture, mass-spectrometric obs. 3=18211
 free radicals, interaction with silica gel surface, e.s.r. study 4=1321
 friction and deformation of surface 1=20344
 friction, up to few 100 cm/sec, -60 to +300°C 3=16012
 friction of rubber-like polymers at low temp. 4=7398
 friction with steel, measurement 1=11525
 friction, two-term law, on steel 3=13387
 frictional coeff. of molecules in soln. 4=27157
 gas-crystalline state 0=1916
 gel cellophane, elec. resist., rel. to sorbed water 2=6429
 gel formation resulting from cross-linking and scission 3=17625
 gelation, theory 1=10426
 glass temp. and coeffs. of expansion 2=21557
 glycol-water mixture, surface tension 2=2691
 grafted copolymers, heterogeneity by light scatt. 2=12937
 helical, absorption and rotation of light 3=10916
 helical molecules, normal vibrations 1=17380
 helical, normal molecular vibrations 3=10557
 helical, normal vibrations 0=20698
 helical, symmetry, electronic states of double-stranded polynucleotides 3=2682
 helix-random-coil transition, theory 2=16576
 heteropolyacids, dextro-optically active crystal growth 2=8782
 high, dielectric β -relaxations 1=12345
 high, in dilute solutions, thermal diffusion 0=19103
 high, dynamic mechanical properties 0=18250
 high, mechanical testing 1=14882
 high polymer molecules, effect of solvent on extension 1=8865
 high polymer solids, rheological behaviour rel. to temp. 1=20346
 high polymer solutions, ultrasonic spectroscopy 1=10512
 high polymers, relaxation phenomena and second-order transitions 1=15165-7
 high polymetric materials, bibliography 3=13102

Polymers—contd

- high, solns., u.s. degradation and cavitation 4=21104
 and hydrated monomers, molec. interaction, rel. to i.r. spectra 4=20142
 hydrocarbon, film production in discharge 1=20664
 hydrophilic, direct radiation grafting 1=15205
 hypochromism, Bolton-Weiss theory, extension 4=9795
 inorganic [AB], bond, alternation calc. 4=9801
 interdependence of physical properties 1=1445
 internal rotation, extension, internal and intermolec. interactions 0=17857
 internal vibr. coords. 2=1982
 intrinsic viscosity, measurement, velocity gradient effects 0=8599
 irradiated, intrinsic viscosity 0=20701
 irradiated, mol. wt. distrib. 3=8325
 irradiated, molecular linking 0=21293
 irradiated, solubility behaviour analysis 0=7820
 irradiation effects, review 1=7603
 isomerism, stereo, and transitions 3=20037
 isotactic polypropylene in α -chloronaphthalene, virial coeff., second 4=24181
 isotactic polypropylene in tetralin, virial coeff., second 4=24181
 isotactic vinyl, dipole moment and length 1=14120
 isotactic vinyl polymers, dipole moments and dimensions 0=9834
 isotactic vinylic hydrocarbon-type chains, mean square length 1=7507
 light scattering by dilute solns. 4=14143
 light scattering by films under strain 0=6374
 light scattering, intramolecular 1=8120
 linear atactic, unperturbed dimensions 2=8139
 linear chain mols., non-random degradation 3=8324
 linear, excluded volume effect, calc. 0=15791
 linear, heat capacity at low temps. 0=18384
 linear molecular chain containing impurity, excited states, erratum 4=15393
 linear molecules in soln., partition functions 4=21103
 linear molecules in solution, extension determination by light scattering 1=17382
 linear polyamides, dielectric props. 0=4246
 linear, solid-state, conformational analysis 3=3351
 liquid, elasticity, shear strength and viscous flow 3=21351
 liquid macromolecules, anisotropy by light scatt. 2=6239
 liquid, rate and press. effects 2=13340
 liquids, structure and intermolecular forces, dielec. aspects 4=14139
 local steric hindrances and conformations of linear mols. in solu. 2=20894
 long chain polyenes, LCAO-MO calcs. 2=3768
 long-range forces between molecules 1=14132
 lubrication 1=12610
 macromolecular chains, diffusion, translation, sedimentation, in solvents, meas. 3=9454
 macromolecular solutions, hydrodynamics 0=12405
 macroradicals, mechanical destruction 4=2138
 mag. props., anomalies, and electron spin resonance 0=20703
 magnetic properties, rel. to theory of Heisenberg ferromagnet 4=13132
 mechanical behaviour rel. to structure 4=13693
 mechanical props. dynamic, meas. 2=4300
 melt fracture, Hooke's law 0=13903
 melt viscosity and critical chain length 4=25799
 melts, flow and fracture at high shear rates 4=28974
 melts, rheological meas. 4=14112
 membranes, transport props. 1=15848
 methacrylic acid adsorption on glass, i. r. spectrum obs. 4=7728
 methacrylic esters, homologous, in soln., molec. interactions, effective dipole moment 0=7821
 methylmethacrylate-methylmethacrylate, optical activity 0=8258
 methylmethacrylate and styrene, statistical, block and graft co-polymers, structure 3=11701
 methyl methacrylate copolymer, service life and failure under tensile load 0=16234
 methylmethacrylate-Ge interface, surface conductivity 3=20300
 methyl methacrylate, viscoelastic behaviour, rel. to glass polishing 4=10393
 mol. wt. det. from viscoelasticity theory 1=14133

Polymers—contd

- mol. wt. distrib., from stress relaxation in metals 4=7738
 molec. dimensions in finite-conc. solutions 2=6242
 molec. size distrib. function, rel. to irradiation 4=25795
 molec. wt. distrib. from meas. in soln. 2=2036
 molecular π electron states, calc., analogue 4=9757
 molecular relaxation 50-100 deg. above vitrification point 4=1333
 molecular size distrib., and gelation of irradiated copolymers 1=2357
 molecular weight determination 0=1058
 molecular weight distribution, influence on properties 1=10508
 molecular wt. det. from sedimentation 0=14141
 multicomponent copolymers, composition distrib. 1=12339
 molecular wt. distrib., det. by fractionation, theory 0=20702
 molecule, lattice model, statistical thermodynamics 4=12549
 molecules, form. by condensation in expanding gas beams 4=25794
 molten, cooling of spinning thread line 0=6987
 multicomponent copolymers, composition distrib. 3=20040
 mylar, dielectric loss, l.f., liquid He temps. 4=20411
 neighbour interactions and internal rotations, solvent effect 0=15790
 nitrocellulose in acetone, virial coeff., second 4=24181
 nitrocellulose, surface charge on separation from steel, meas. 4=7695
 non-Gaussian character of real polymer chains 3=10558
 nuclear mag. resonance, effect of correlation time distrib. on T_1 and T_2 1=7806
 nuclear magnetic relaxation, meas. with spin echo spectrometer 4=23064
 nuclear relaxation times 3=22592
 nylon, filament, dielectric constant meas. 1=16232
 nylon, pressure-induced transitions, optical study 3=23494
 nylon, proton mag. resonance 1=20265
 nylon, viscoelasticity 1=7811
 Nylon-4, internal friction, 100°-300°K 4=1959
 nylon 6-6, i.r. spectrum, effect of pressure 4=22908
 nylons 6-6 and 6-10, dielectric loss at low temps. 1=17822
 Nylon 66, optical retardation by films, continuous change meas. 1=19962
 Nylon 66 unoriented filaments, extension 4=4653
 optical activity, theory 1=9487
 optical and electronic properties, theory 0=20704
 optical and electrical props., solns. flowing in a.c. + d.c. fields 4=18199
 optical props., classical model 4=26165
 optical retardation by films, continuous change, meas. 1=19962
 optical rotation, exciton contribution 4=9800
 organic glasses, deformed, submicroscopic cracks 0=6318
 orientation meas. X-ray diffraction methods 4=10629
 oriented, structure, X-ray diff. 3=13438
 oxidation, i.r. spectroscopic study. 4=4697
 PMMA films, "silver" cracks 2=6847, 8878
 p.t.f.e., dielectric loss increase by X-rays 4=20412
 PTFE, irradiated, nuclear dynamic polarization of F^{19} 1=12571
 p.t.f.e., wear on glass 4=23199
 p.v.c., relaxation, similarity of acoustic and dielectric 4=15419
 p.v.c., stress-strain relations, high sine deformation 4=17741
 pair potentials in nonpolar media 3=12880
 paraffin, bulk modulus by "suspension method" 1=12578
 paraffin crystals, α -dispersion 3=6781
 n-paraffins, cryst., phase transitions 3=16020
 partially crystalline, dynamic degree of crystallinity 3=11308
 partition function 2=12356
 permeation through polymer film, anomalous 3=1679
 phase separation in conc. solns. in H_2O 4=24179
 phenol resin, dynamic mechanical props. at ultrasonic frequencies 1=2502
 physics of conference report 1=11587
 π -electron excitation, by 20 keV electrons 3=22617
 piezoelectric, 20 natural and synthetic 3=20392
 pipe flow of polymeric solns., Reynolds no. 4=135
 plastic flow, meas. difficulties 4=7381
 plastic insulators, positron annihilation 1=19918

Polymers—contd

- plasticity of macromolecules, temp. peaks, crystallization 4=17742
 pleochroism, helical, unusual circular dichroism curve 4=17327
 Plexiglas, electrical effects of electron bombardment 1=3809
 Plexiglas, radiation protection props. 2=20357
 Plexiglas, refractive index meas. 1=16065
 plexiglas, refractive index meas. 1=18577
 Plexiglas, pre-breakdown behaviour 1=17849
 Plexiglas, u.s. excited, light diffraction 1=8237
 Plexiglass, fracture, a typical cleavage surface colours 4=26525
 polar and non-polar, dipole relaxation, review 4=26108
 polar solns., thermodynamic props. 3=11790
 polar solutions, thermodynamic props. 3=14158
 pole figures, preparation by computer technique 4=10628
 polyacene, triplet-singlet transitions, polarization 2=20857
 polyacenes, triplet-triplet absorption spectrum, polarization 3=23082
 polyacenes, vitreous solid solutions, luminescence, delayed, 77°K 3=20535
 polyacrylamide, γ -dosimeter 1=8406
 polyacrylic acid solution, sedimentation of microscopic spheres 0=76
 polyacrylonitrile, semiconducting mechanism 3=20341
 polyacrylonitrile, crystal structure 3=11276
 polyacrylonitrile, elec. cond., Hall effect, thermoelec. power 4=22733
 polyacrylonitrile, elec. cond. and thermoelec. power 1=7656
 polyacrylonitrile, pyrolyzed, current noise 2=2169
 polyacrylonitrile, pyrolyzed, current noise 4=22734
 polyacrylonitrile, tensile strength 2=19007
 polyacrylonitriles, normal vibrations 4=28292
 polyacrylonitril, fibres, mech. props., temp. depend. 3=23358
 polyalcohols, permittivity and viscosity, H-bond mechanism 1=15896
 polyamide, transition phenomena, mechanical dispersions 1=14851
 polyamides, d.c. cond. rel. to temp., H_2O content and voltage 4=7038
 polyamides, dielec. relaxation, 50 c/s-10 Mc/s, -100° to +175°C 1=12305
 polyamides, n.m.r. of water content 3=6768
 polyamides, transition studies 0=6375
 polyatomic molecules, vibr. rotn. energy 1=17304
 polybenzylglutamate, soln., strain birefringence 3=5441
 poly(bisphenol-A carbonate), viscoelastic behaviour 4=4687
 polybutadiene, viscous behaviour 4=23196
 poly(butene-1), transition studies 0=6375
 polybutyl methacrylate-isopropanol, critical opalescence 3=21353
 polybutylacrylate, internal motions 1=14159
 polybutylmethacrylate, diffusion in chloroform and isopropanol 0=14636
 polybutylmethacrylate, diffusion and sedimentation in isopropyl alcohol 0=12111
 polybutylmethacrylate, internal motions 1=14159
 polybutylmethacrylate, photoelastic effect 0=5187
 polycaprolactam fibre films, stress effects on long range order 4=23618
 polycaprolactam, stress effects on mol. mobility, n.m.r. obs. 4=23617
 polycaprolactame, fibres, mech. props., temp. depend. 3=23358
 polycarboxylic acid, hydration-dehydration 1=15865
 polychloroprene latex globules, size det. 0=19446
 polychloroprene, refr. index rel. to crystallinity 2=6544
 polychloroprene, in various solvents, optical anisotropy 4=25788
 polychloropropylene, mol. optical anisotropy 4=22444
 polychlorotrifluoroethylene crystal growth, oriented on KCl crystal 3=18265
 polychlorotrifluoroethylene, spherulitic cryst., with chain folds 3=3272
 poly copper phthalocyanine, semiconducting props. 0=4358

Polymers—contd

- polydeuteroethylene, vibrational spectrum 3=10556
 polydimethyl-diphenyl and polydimethyl siloxanes, cross-linking 3=10563
 polydimethylsiloxane, internal mol. rot. 2=14249
 polydimethylsiloxane, radiothermoluminescence 0=21018
 polydimethylsiloxane soln., second virial coeff. 2=19556
 polydimethylsiloxane, viscoelastic consts. 4=24189
 polydisperse system, random degradation 2=23961
 poly DL phenylalanine, length distribution of macromolecules 1=11766
 polyelectrolyte multicomponent solns., light scatt. and sedimentation 2=11366
 polyelectrolyte soln., self-diffusion of ions 2=13331
 polyelectrolyte solns., interaction of neighbouring charged groups, effect on props. 3=21345
 polyelectrolyte solns., volume effect theory 3=21346
 polyelectrolytes, aggregation in soln. 2=7049
 polyelectrolytes, chain model, potentiometric titration 2=7206
 polyelectrolytes, rod-like, interactions 1=8114
 polyelectrolytes, 2nd virial coeff. 2=17456
 polyelectrolytes, 2nd virial coeff. 4=161
 polyelectrolytes, second virial coeff. 3=21347
 polyene chains, electronic 0=9831
 polyene, cyclic, $C_{2n}H_{2n}$, bond length alternation, theory 0=9835
 polyene spectra, exciton and electron delocalization 2=22994
 polyenes with alternating bond lengths, electronic states 2=14344
 polyenes, bond alternation defects 2=6241
 polyenes, LCAO-MO ω -technique calc. 2=16499
 polyenes, linear, electron mobility and elec. cond. 3=4926
 polyenes, substituted, solns., fluorescence 3=23891
 polyester fibreglass, delayed fracture, mechanism 4=1942
 polyethylacrylate, dielec. props., effect of adsorbed water 2=16767
 polyethylacrylate, internal motions 1=14159
 polyethylene, adsorption of hydrogen 1=9163
 polyethylene, absorption spectra, rel. to electron irradi. 4=1416
 polyethylene, alkyl-type-alkyl-type radicals, photochem. change 4=4712
 polyethylene, α -dispersion and mol. motion 3=6781
 polyethylene, α -irrad., crosslinking and chain scission 2=4478
 polyethylene, amorphous, cross-linked, photoelastic prop. 4=20680
 polyethylene, amorphous state 3=3350
 polyethylene, annealing after drawing, light scatt. study 1=20641
 polyethylene anti-reflection optical film 0=5155
 polyethylene, b_{1u} methylene wagging and twisting 0=15792
 polyethylene, bulk-cryst., internal morphology 3=23368
 polyethylene, bulk modulus by "suspension method" 1=12578
 polyethylene, with C-black, transmittance, 17-55 μ 0=6167
 polyethylene, cleavage surface, crystallite lamellae 3=13547
 polyethylene, cohesion, autogenous, under high press. 4=26526
 polyethylene, contact charging due to irradiation 0=10860
 polyethylene containers, liquid scintillation counting 3=14824
 polyethylene, crosslinked, crystal growth rel. to orientation 1=20426
 polyethylene, crosslinked, strained, crystallite orientation 4=29031
 polyethylene, cryst. habits and growth 2=23811
 polyethylene, crystalline, heat capacity 1.8°-5.3°K 2=14380
 polyethylene, crystalline, low-frequency motions, study by neutron scattering 4=12551
 polyethylene, crystalline vacancies and subst. sites 2=14430
 polyethylene, crystalline vibr. spectrum 2=23905
 polyethylene, crystallization kinetics, influence of prep. 1=20423
 polyethylene crystals, defects 0=17923
 polyethylene crystals, deformation rel. to twinning and phase transition 4=20679
 polyethylene crystals, folding of moles. 3=11274

Polymers—contd

- polyethylene, crystals, i.r. spectra 3=23083
 polyethylene crystals, monolayer, fold surface geom. 4=4518
 polyethylene crystals, monolayer, habit features 4=4517
 polyethylene, decay of alkyl radicals, by e.s.r. 4=28276
 polyethylene, density, single crystals, by pycnometer 3=20766
 polyethylene, detachment replica 1=20407
 polyethylene, dielec. permittivity and loss 2=11599
 polyethylene, dielectric loss, γ irradi., large change mechanism 4=7039
 polyethylene, diffusion of ethane 4=28481
 polyethylene, diffusion recombination 3=20379
 polyethylene, drawn, anisotropy of shear moduli 2=14870
 polyethylene, drawn, anisotropy of Young's modulus 1=10275
 polyethylene, dynamic birefringence 3=10915
 polyethylene, dynamic mechanical properties 0=8110
 polyethylene, effect of irradi. on internal motion 3=13546
 polyethylene, effect of irradiation on elec. cond. 3=10886
 polyethylene, elastic relaxation 4=7375
 polyethylene, elec. strength at low temp. 2=4101
 polyethylene, electrical conductivity, rel. to electron irradiation 4=1657
 polyethylene, electrical and paramagnetic props., relation between 4=22952
 polyethylene, electron corona bombard. 2=12982
 polyethylene, electron-irradiated, thermostimulated e.m.f. 1=17642
 polyethylene, electron microscope observation 1=10285
 polyethylene, electron microscopy, crystallinity effects 0=16340
 polyethylene, ethylene copolymers, flow meas. difficulties 4=7381
 polyethylene, extension of Eyring-Ree theory of flow 1=18367
 polyethylene, fibres, ion bombardment etching 3=23497
 polyethylene, fibrous, low angle X-ray diffraction 0=8251
 polyethylene filaments, X-ray line broadening 1=20697
 polyethylene, flow in capillary 0=8605
 polyethylene, free radicals prod. by γ -irradiation 1=14344
 polyethylene, γ -ray induced elec. conductivity 3=10874
 polyethylene, γ -transition, e.s.r. study 2=14833
 polyethylene glycol, molecular vibrations and structure 3=6444
 polyethylene glycols, and in benzene, dielec. props. 0=14656
 polyethylene, grafting of styrolene after low temp. irradiation 1=20765
 polyethylene, high-density, crystal structure 2=21527
 polyethylene, high density, dielec. loss, α -process 0=7985
 polyethylene, high-density, far i. r. absorption, spectra 4=10207
 polyethylene, infrared-active interchain vibration 4=26228
 polyethylene, γ -irrad. proton n.m.r. 2=12837
 polyethylene, γ -irrad., thermoluminescence, effect of O_2 3=4995
 polyethylene, γ -irradiated, induced conductivity in co-ax. cable 0=9949
 polyethylene, γ and n-irrad., energy deposition rate 0=20531
 polyethylene, irradi., e.s.r. 4=1334
 polyethylene, irradi. e.s.r. and mol. orientation 2=4264
 polyethylene, irradi., e.s.r. study 2=3779
 polyethylene, irradi., electron-spin density 4=3949
 polyethylene, irradi. oriented, temp. depend. of e.s.r. 2=23022
 polyethylene, irradi., trapped radical disappearance, kinetics 2=16564
 polyethylene, irradiated, free radical decay 3=2671
 polyethylene, isothermally bulk-cryst., lamellar structure 4=7684
 polyethylene, kinetics of cryst. nucleation 2=23823
 polyethylene, lamellar thickness, melting pt, density, effect of crystallization 4=15809
 polyethylene, light scatt. patterns, interpretation 2=2222
 polyethylene, light scattering under dynamic conditions 3=10914
 polyethylene, linear, molecular structure in crystal aggregates 1=3579
 polyethylene, linear, orientation determ. 3=11307
 polyethylene, linear, spin-lattice relaxation time and line-shape 4=4430

Polymers—contd

- polyethylene, linear, X-ray diffr. 2=4504
 polyethylene, low-frequency molecular motions 4=3952
 polyethylene, mechanical loss 0=1846
 polyethylene, melting and molten, ultrasonic propag. consts. 4=27175
 polyethylene, micro-crystals, I-V characteristics 3=8558
 polyethylene and mixtures with polybutadiene, energy transfer during γ -irrad. 1=7920
 polyethylene, mol. optical anisotropy 4=22444
 polyethylene, neutron inelastic scattering investigation, 20°C 4=5153
 polyethylene, neutron moderation 3=19648
 polyethylene, neutron scatt. detector 2=3359
 polyethylene, neutron spectra 2=5648
 polyethylene, nonoriented, crystalline, low-angle X-ray diffraction 1=11605
 polyethylene, 0.5-14 MeV, var. thicknesses, calc. 4=6070
 polyethylene, oriented crystalline, i.r. absorption, dichroism 1=14608
 polyethylene, orthorhombic, melting props. 2=14391
 polyethylene oxide copolymers, cryst. and melting meas. 4=7562
 polyethylene oxide, melting 2=15821
 polyethylene, oxidized, high-pressure, dielectric behaviour 3=22989
 polyethylene, p.m.r., and crystal struct. 4=17700
 polyethylene, permeability changes, due to irradiation 0=12064
 polyethylene, permittivity effect of high press. 2=23494
 polyethylene, positron lifetime in 2=6306
 polyethylene, pressure-induced transitions, optical study 3=23494
 polyethylene, proton mag. relaxation 4=23064
 polyethylene, radiation protection props. 2=20357
 polyethylene, radiothermoluminescence 0=21018
 polyethylene, recrystallization 3=11232
 polyethylene, second crystallite modification 0=18371
 polyethylene, second order transition phenomena 1=9155
 polyethylene, secondary electron emission due to γ -irrad. 1=13120
 polyethylene, secondary recryst. and annealing 4=7561
 polyethylene semiconductor, rectifying effect 4=10073
 polyethylene, sheets, polarizer for far i.r. 0=6953
 polyethylene single crystals, dislocation arrays 4=17434
 polyethylene, single crystals, morphology 0=18292
 polyethylene single crystals, recryst. rate in hot liqs. 1=20424
 polyethylene single crystals, structurally distinct sectors 0=4667
 polyethylene, small-angle X-ray diffr. 3=5153
 polyethylene, solid, molecular motion in disordered regions 1=20640
 polyethylene, solid, nuclear signal shape 4=4431
 polyethylene in soln., local steric hindrances and conformations 2=20895
 polyethylene, solid, molecular motion in disordered regions 1=20640
 polyethylene, solubility and diffusivity of N 0=12066
 polyethylene, sp. ht. crystallinity depend. 2=23904
 polyethylene, specific heat, low-temp., from force consts. 3=8366
 polyethylene spherulites, radial growth and extinction bands 4=7683
 polyethylene spherulites, structure studies, light scatt. method 0=21221
 polyethylene, spherulitic crystallization 1=14972
 polyethylene, strength, rel. to strain and γ -irrad. 2=21438
 polyethylene, stress relax., rel. to strain rate and temp. 4=20681
 polyethylene, stretched, ESR spectrum 1=20227
 polyethylene, stretching, electron microscope study, low-angle scatt. 4=23410
 polyethylene, structure at low temps. 0=18337
 polyethylene terephthalate, biaxially orientated, effect of temp. and reactor irradiation 0=18274
 polyethylene terephthalate, crystallization, liquid induced 2=23822
 polyethylene terephthalate, diffusion of gases 3=11306
 polyethylene terephthalate, dynamic elastic moduli 3=8754
 polyethylene terephthalate fibres, crystallinity meas. 0=14052
 polyethyleneterephthalate, fibres, mech. props., temp. depend. 3=23358

Polymers—contd

- polyethylene terephthalate, films, n.m.r. 3=11124
 polyethylene terephthalate, molec. structure and strength of fibres 1=14136
 polyethylene terephthalate (nylon) elec. strength at low temp. 2=4101
 polyethylene terephthalate, PET, crystallinity meas. by X-ray and n.m.r. 1=1444
 polyethyleneterephthalate, rotational isomerism 4=6671
 polyethylene terephthalate, solution of gases 3=11305
 polyethylene terephthalate, stress effects on mol. mobility, n.m.r. obs. 4=23617
 polyethylene terephthalate, structure 3=18372
 polyethylene terephthalate, tensile strength, effect of reactor irradiation 0=18273
 polyethylene terephthalate, transversely isotropic elastic consts. 4=1960
 polyethylene, thermoluminescence after γ -irrad. 3=4994
 polyethylene, transition phenomena, mechanical dispersions 1=14851
 polyethylene, transmission in far i.r. 2=5023
 polyethylene, ultrasonic purification 1=20638
 polyethylene, ultrasonic purification 2=6814
 polyethylene, unperturbed mean-square end-to-end distance 1=17379
 polyethylene, vibrational spectrum 3=10556
 polyethylenes, density, shear, crystallinity, temp. depend. 3=13326
 polyethylenes, electron-irradiated, dynamic mech. props. 1=9080
 polyethylenes, γ -irrad. effect on crystallite size distrib. 4=13699
 polyethylenes, n. irrad., protons polariz. 3=20064
 polyethylenes, irradiated, proton spin diffusion and relaxation 4=10349
 polyethylenes, neutron irrad., dynamic proton polarization 4=1899
 polyethylenes, Raman spectra 3=8321
 polyethylenes, soln.-grown, mechanical dispersions 3=1400
 polyethylenes, transition studies 0=6375
 polyethylmethacrylate, dielec. props., effect of adsorbed water 2=16767
 polyethyl methacrylate, dynamic bulk and shear viscosity 1=20343
 polyethylmethacrylate, internal motions 1=14159
 polyethylsiloxanes, mech. props. and mol. structure 1=20642
 polyformaldehyde, γ -irrad., free radicals, e.s.r. 3=12858
 poly-4,4'-dioxydiphenyl-2,2-propan carbonate, n.m.r. absorpt. 4=23075
 poly-4-methyl-pentene-1, morphology and chain packing 0=16333
 poly- γ -benzyl-L-glutamate, dielec. dispersion and struct. 4=26109
 poly- γ -benzyl-L-glutamate in m-cresol, viscosity 3=135
 poly- γ -methyl-L-glutamate, Pauling-Corey α -helix detrm. 3=6838
 poly-i-butyl methacrylate, dynamic bulk and shear viscosity 1=20343
 poly-i-butylene-benze, solns., optical props., near critical mixing temp. 3=21352
 polyisobutene in cetane, rheology, vortices in cone-plate viscometer 4=21079
 polyisobutylene, anisotropy by scatt. of light 2=6239
 polyisobutylene, dynamic shear behaviour, effect of pressure 0=18249
 polyisobutylene, elastic deformation 1=14871
 polyisobutylene, elastic deformation 1=20322
 polyisobutylene, internal mol. rot. 2=14249
 polyisobutylene, melt viscosity, press. and temp. depend. 0=3492
 polyisobutylene, n.m.r. 0=7810
 polyisobutylene, radiothermoluminescence 0=21018
 polyisobutylene in soln., sonic degradation 4=7773
 polyisobutylene, thixotropy 4=23197
 polyisobutylene, transition studies 0=6375
 polyisobutylene, viscoelastic behaviour 3=11167
 polyisobutylene, viscosity 1=2729
 polyisobutylene, viscosity 3=7203
 polyisobutylene, viscous flow 0=10266-9

Polymers—contd

- poly-L-proline II and poly-L-hydroxyproline A, structure 0=4664-5
- polymer plastic resistance to erosion by cavitation 1=20394
- polymer-solvent systems, sedimentation coeff. rel. to conc. 4=13747
- polymeric materials, rolling friction 1=11526
- polymerizing systems, multiple equilibria 4=20138
- polymethacrylate, dielec. loss rel. to struct. 2=14600
- polymethacrylate, effect of molec. wt. on luminescence 0=20995
- polymethacrylic acid, γ -irradiated, e.p.r. spectrum 0=501
- polymethine chains, electronic structure rel. to chain length and isomerization 4=6636
- polymethylacrylate, internal motions 1=14159
- polymethyl acrylate monolayers, viscoelasticity 3=16126
- polymethyl acrylate, n.m.r., T₁ temp. dependence 1=14830
- polymethyl methacrylate, birefringence rel. to stretching 3=17982
- polymethyl methacrylate-butyl chloride, critical opalescence 3=21353
- polymethylmethacrylate, cold-drawing deformation mechanism 0=8117
- polymethylmethacrylate and copolymer solns., viscosity 2=13341
- polymethylmethacrylate, crack growth, kinetics 1=12607
- polymethylmethacrylate, crack growth and structure 0=6315
- polymethylmethacrylate, crosslinking and chain scission 2=4478
- polymethylmethacrylate, dielec. props., effect of adsorbed water 2=16767
- polymethylmethacrylate dielec. props. rel. to stretching 2=8461
- polymethylmethacrylate, dilute soln. props. 3=134
- polymethylmethacrylate in diphenyl solution, shear viscosity rel. to shear stress 3=16619
- polymethyl methacrylate, dynamic behaviour, 60-300°K 1=14850
- polymethyl methacrylate, dynamic bulk viscosity 1=10477
- polymethyl methacrylate, dynamic mechanical props. at ultrasonic frequencies 1=2502
- polymethylmethacrylate, e.s.r. spectra rel. to γ -irrad. 2=8123
- polymethylmethacrylate, elec. resis., rel. to sorbed water 2=6429
- polymethylmethacrylate, elastic constants, 50-1000c/s -80 - + 100°C 3=6776
- polymethylmethacrylate, "electretized", elec. and opt. props. 0=1705
- polymethyl methacrylate films, deformation and tensile strength, rel. to drawing and temp. 4=7734
- polymethyl-methacrylate, fracture energy variation with temperature 1=9096
- polymethyl methacrylate, fracture surface energy 3=11179
- polymethylmethacrylate, fracture surfaces study 2=12866
- polymethylmethacrylate, free radicals formed on mech. destruction 2=2031, 8129
- polymethylmethacrylate, γ -irradiated, dielectric properties 0=6803
- polymethylmethacrylate, γ -irradiated, e.p.r. spectrum 0=501
- polymethylmethacrylate, γ -irradiated, e.s.r. 0=18221
- polymethylmethacrylate, internal gas bubble formation by heat 0=8259
- polymethylmethacrylate, internal motions 1=14159
- polymethylmethacrylate, light scatt. by soln. 2=5017
- polymethylmethacrylate, luminescence during reactor irradiation 0=1759
- polymethylmethacrylate, mech. props., 1.6-4.2°K 0=18241
- polymethyl methacrylate monolayers, visco-elasticity 3=16126
- polymethyl methacrylate, n.m.r., T₁ temp. dependence 1=14830
- polymethylmethacrylate, optical activity 0=8258
- polymethylmethacrylate, photoelastic effect 0=5187
- polymethylmethacrylate, with phthalimide, fluorescence max. polarization 0=8018
- polymethylmethacrylate, protection against radiation damage 1=8920
- polymethylmethacrylate, rupture factor 3=3235

Polymers—contd

- polymethylmethacrylate, service life and failure under tensile load 0=16234
- polymethylmethacrylate, shear, Young's and bulk moduli, Poisson's ratio 4=7445
- polymethylmethacrylate, with Sn, Mössbauer effect 2=10930
- polymethylmethacrylate, with Sn, Mössbauer effect 3=6877
- polymethyl methacrylate, stress strain velo., cracks, theory 4=13439
- polymethylmethacrylate, stretching rel. to dielec. props. 2=8461
- polymethylmethacrylate, surface cracks, thermal healing 4=7446
- polymethylmethacrylate, surface degradation 0=3309
- polymethylmethacrylate, suspensions, spheres, macroscopic, dilute, viscosity, non-Newtonian 3=18788
- polymethylmethacrylate with Tb³⁺ chelate, stimulated emission 4=9001
- polymethylmethacrylate, tensile strength 2=19007
- polymethyl methacrylate, tensile strength and birefringence 3=18207
- polymethylmethacrylate, transition studies 0=6375
- polymethylmethacrylate, u.s. enhanced absorption 1=15874
- polymethylmethacrylate, u.v., γ -ray effects 2=18503
- polymethylmethacrylate, vitrification under high press. and temp. 0=12060-1
- polymethylsiloxanes, mech. props. and mol. structure 1=20642
- polymonochlorotrifluoroethylene, dipole moment rel. to configuration 1=3580
- poly-n-butyl methacrylate, dynamic bulk and shear viscosity 1=20343
- poly (normal α -olefins), spin-lattice n.m.r. relax. 4=6672
- polynucleotide, helical, double-stranded, spectra, exciton bands 4=9799
- polyolefins, deformation, crystal reorient. processes 4=7448
- polyoxyethylene glycol, anisotropy by light scatt. 2=6239
- polyoxyethylene, normal vibrations and Raman spectrum 1=12279
- polyoxyethylenglycol, molec. structure from electric moment 1=8867
- polyoxymethylene, irrad., e.s.r. 2=21371
- polyoxymethylene, normal molecular vibrations 3=10557
- polyoxymethylene, proton mag. relax. 4=23064
- polyoxymethylene, screw dislocations 0=18292
- polyoxymethylene single crystals, electron microscopy 3=11334
- polyoxymethylene, spherulitic crystn. rate 4=23620
- polypeptide chains, perturbation calc. of characteristic vibrations 0=15789
- polypeptides, dimensional change in helix-coil transition region 1=6062-3
- polypeptides, helical, Cotton effect, origin 3=2681
- polypeptides, helix-coil equilibrium 3=10559
- polypeptides, helix-random-coil transition 2=16576
- polypeptides, model for helix-random coil transition 3=8322
- polyphenylene, resistivity 3=4936
- polyphenyls with anthracene impurities, luminesc. and absorpt. 2=6567
- polyphenyls, linear, compressibility 3=15985
- polyphosphonitrilic chloride, optical anal. of fibre diagram 4=3945
- polypropionate, in various solvents, optical anisotropy 4=25788
- polypropylene, atactic and isotactic, thermodyn. props. rel. to structure 3=10597
- polypropylene, birefringence, principle bond polarizabilities 0=20971
- polypropylene, bulk modulus by "suspension method" 1=12578
- polypropylene, crystallinity 2=10949
- polypropylene, diffusion and sorption of gases, rel. to crystallinity 1=19800
- polypropylene, far i. r. absorption, spectra 4=10207
- polypropylene, fibres, mech. props., temp. depend. 3=23358
- polypropylene fibres, tensile strength, rel. to double refraction 3=23045
- polypropylene films, microstructure rel. to mech. props. 4=7447
- polypropylene films, orientation meas. 0=18410
- polypropylene, folded mols. in single-cryst. lamellas 2=8835

Polymers—contd

- polypropylene, irradi., trapped radical disappearance, kinetics 2=16564
 polypropylene, irradiation changes in structure 0=10359
 polypropylene, isotactic and atactic, low-frequency motions, study by neutron scattering 4=12552
 polypropylene, isotactic, i.r. spectrum and vibrations 3=17624
 polypropylene, isotactic, optical retardation by films 1=19962
 polypropylene, n.m.r. second moments 3=3200
 polypropylene, proton mag. resonance and x-ray diffraction study 1=9154
 polypropylene, shape double-refraction 4=20474
 polypropylene, spin-lattice relax time 2=11814
 polypropylene, tensile strength, time dependent 1=6469
 polypropylene, thermal props. rel. to γ -irrad. 3=2728
 polypropylene, transition phenomena, mechanical dispersions 1=14851
 polypropylenes, transition studies 0=6375
 polysiloxanes, linear, u.s. relaxation study at 30-270 Mc/s 3=11793
 polystyrene, absorption spectra 50-2500 μ 0=10035
 polystyrene, adsorption and desorption rates on chrome, 10^{-1} to 10^{-4} mg/nl conc. range 4=30888
 polystyrene, with Al powder, dielectric anisotropy 1=14544
 polystyrene, in benzene, light scattering indicatrix 0=12495
 polystyrene, birefringence under const. tension 1=14575
 polystyrene, brittleness, high press. var. 4=23198
 polystyrene and copolymer solns., viscosity 2=13341
 polystyrene, crack growth and structure 0=6315
 polystyrene in cyclohexane, crit. opalescence rel. to mol. force range and radius of gyration 2=5016, 11373
 polystyrene in cyclohexane, critical opalescence 1=1743
 polystyrene-cyclohexane, solns., critical opalescence 3=21353
 polystyrene-cyclohexane, solns., optical props., near critical mixing temp. 3=21352
 polystyrene, dielectric current oscs., high voltage 4=28621
 polystyrene, dielec. props. 2=12556
 polystyrene, dilute soln. props. in θ -solvents 3=16616
 polystyrene, dilute solns. in toluene, viscoelastic props. 4=24190
 polystyrene, dynamic bulk viscosity 1=10477
 polystyrene, dynamic mechanical props. at ultrasonic frequencies 1=2502
 polystyrene, e.s.r. studies of γ -irradiation effects 0=6420
 polystyrene, effect of molec. wt. on luminescence 0=20995
 polystyrene film, 1 μ thick, formed in glow, dielectric props. 4=4207
 polystyrene films, electron energy loss rel. to momentum 4=20261
 polystyrene, fluoresc. rel. to styrene monomer. 2=12633
 polystyrene foams, mechanical-acoustical behaviour 2=17523
 polystyrene, fractions in soln., diffusion coeff. 0=16054
 polystyrene, fracture energy variation with temperature 1=9096
 polystyrene, fracture surface energy 3=11179
 polystyrene, free radicals formed on mech. destruction 2=2031, 8129
 polystyrene, γ -irradiated, unpaired electron spin density distrib. in macroradical 4=30492
 polystyrene, heat capacity in glass-transform. interval 4=7736
 polystyrene, H_2SO_4 treated, cation-exchange foils for α -sources 2=19148
 polystyrene, hypochromism, solvent effects 4=3948
 polystyrene, isotactic, characteristic bands in i.r. spectrum 1=17902
 polystyrene, large-vol. scintillators, prep. and props. 2=2259
 polystyrene latexes, light scattering 0=10784
 polystyrene latexes, mag. susceptibility 1=3034
 polystyrene, luminescence during reactor irradiation 0=1759
 polystyrene-metal mixtures, dielec. props., microwave region 3=22986
 polystyrene, in mixed solvents, adsorption 2=13330
 polystyrene, mol. network and orientational processes 4=25797

Polymers—contd

- polystyrene, optical props., γ ray effects 4=8405
 polystyrene-PMMA grafted copolymer study 2=12937
 polystyrene, permittivity, effect of high press. 2=23494
 polystyrene radicals e.s.r. spectrum 2=18494
 polystyrene, radioluminesc. rel. to mol. wt. 3=23117
 polystyrene, range of 0.2-2.7 MeV tritons 3=10180
 polystyrene, refl. coeff. rel. to refr. index and absorpt. coeff., 23.6-113 Å 4=22846
 polystyrene, relaxation enthalpy and cooperative phenomena, in vitrification zone 4=2139
 polystyrene, scatt. of elastic waves, nonlinear theory 3=7269
 polystyrene scintillator, decay time 2=21278
 polystyrene, solid solns., luminescence-solute conc. relation 0=6806
 polystyrene, soln. in cyclohexane, scatt. light, temp. var. 3=9459
 polystyrene soln., light scatt. 3=5530
 polystyrene, in soln., proton mag. reson. 3=11812
 polystyrene soln., refractive index, temp. increment 0=14658
 polystyrene solns., critical opalescence 0=6805
 polystyrene solns., dynamic mechanical props. 4=27158
 polystyrene solns., optical anisotropy, scatt. polarized light study 4=8173
 polystyrene solns., Rayleigh optical scatt., diffusion broadening 4=14142
 polystyrene solns., second virial coeff. calc. 3=16615
 polystyrene, sol. birefringence induced by acoustic waves 2=13339
 polystyrene, solutions in dioxane and butanone, flow birefringence 0=12498-500
 polystyrene solutions, viscosity 1=2729
 polystyrene suspensions, extinction of light 4=5397
 polystyrene, thermal cond. liq. N to room temp. 0=5204
 polystyrene, thermal diffusion in toluene 1=15854
 polystyrene thin films, optical props. in far u.v. 4=22821
 polystyrene, toluene solns., viscoelasticity 2=15583
 polystyrene in toluene, virial coeff., second 4=24181
 polystyrene, "transition" at 50°C, DTA study 4=7737
 polystyrene, transition studies 0=6375
 polystyrene, viscosity rel. to branching prod. by high-energy irradi. 4=16095
 polystyrene, vitrification under high press. and temp. 0=12060-1
 polystyrenes, anisotropy by scatt. of light 2=6239
 polystyrenes, deuterated, reaction with H and D atoms 4=29219
 polystyrenes, diffusion, translation, sedimentation, in solvents, meas. 3=9454
 polystyrenes, short chain, viscosity-mol. wt. dependence 4=25798
 polystyrol, crack growth, kinetics 1=12607
 polystyrol, elec. resist., γ -ray effects 2=15873
 polysulphur nitride, electronic props. 2=14509
 polytetrafluoroethylene, e.s.r. 2=4265
 polytetrafluoroethylene, electron-nucleon double resonance 1=14814
 polytetrafluoroethylene, proton mag. relax. 4=23064
 polytetrafluoroethylene crystal growth, oriented on KCl crystal 3=18265
 polytetrafluoroethylene, elec. cond., anomalous and steady state 4=10103
 polytetrafluoroethylene, electronic energy gap, wavefunctions and energy eigenvalues 0=20700
 polytetrafluoroethylene, F^{19} n.m.r. 0=4529
 polytetrafluoroethylene, γ -irrad., e.s.r. complex spectrum 1=12562
 polytetrafluoroethylene, γ -irradiated, e.s.r. 0=18221
 polytetrafluoroethylene, irradi., e.s.r. 2=20893
 polytetrafluoroethylene, irradiated oriented, e.p.r. 3=17608
 polytetrafluoroethylene, irradiation effect 0=8320
 polytetrafluoroethylene, microstructure rel. to mech. props. 3=25800
 polytetrafluoroethylene, permeability changes, due to irradiation 0=12064
 polytetrafluoroethylene, pressure-induced transitions, optical study 3=23494
 polytetrafluoroethylene, radicals formed on irradiation, e.s.r. spectrum 1=19673
 polytetrafluoroethylene, specific heat, low temp., from force consts. 3=8366

Polymers—contd

- polytetrafluoroethylene, spectra, infrared transmittance and emittance 1=8999
- polytetrafluoroethylene, struct. changes on deform 2=12938
- polytetrafluoroethylene (Teflon) elec. strength at low temp. 2=4101
- polytetrafluoroethylene, thermal expansion 0=6376
- polytetrafluoroethylene, thermal expansion, creep, u.s. props. and phase transitions 4=28975
- polytetrafluoro-ethylene, thermal props var. 4=30533
- polytetrafluoroethylene, transition phenomena, mechanical dispersions 1=14851
- polytetrafluoroethylene, transitions and relaxations 1=12563
- polytetrafluoroethylene, vibrational spectra rel. to temp. and press. 4=20144
- polytetrafluoroethylenes, transition studies 0=6375
- poly-tetra-tertiary butylphenylmethacrylate solutions, flow birefringence and viscosity 0=12501
- polythene, cells for i.r. spectroscopy 2=15731
- polythene, effect of γ -irrad. on elec. cond. 2=3996
- polythene, electric strength, var. with thickness 3=13125
- polythene, electrical conductivity under γ -irradiation 1=17636
- polythene, heat of combustion 1=6986
- polythene, HOH n.m.r. second moment, exptl. verification of calc. 3=10538
- polytrifluorochloroethylene, i.r. properties 0=12473-4
- polytrifluoromonochloroethylene, bulk modulus by "suspension method" 1=12578
- polytrifluoromonochloroethylene, dynamic bulk and shear viscosity 1=20343
- polytrifluoromonochloroethylene, transition phenomena, mechanical dispersions 1=14851
- polyurethane, transition phenomena, mechanical dispersions 1=14851
- polyvinyl acetate in benzene and chloroform solns. and solid, i.r. absorption band 4=20142
- polyvinyl acetate in benzene, u.s. velo. 3=14161
- polyvinyl acetate, cold drawing deformation mechanism 0=8117
- polyvinyl acetate, colloids, effect of shear 2=8938
- polyvinyl acetate, dynamic mechanical props. at ultrasonic frequencies 1=2502
- polyvinyl acetate films, deformation and tensile strength, rel. to drawing and temp. 4=7734
- polyvinyl acetate, free radicals formed on mech. destruction 2=2031, 8129
- polyvinyl acetate, mixed films behaviour 2=2424
- polyvinyl acetate, molten, dielec. props. 2=17476
- polyvinyl acetate monolayers, viscoelasticity 3=16126
- polyvinyl acetate, n.m.r., T_1 temp. dependence 1=14830
- polyvinyl acetate, photoelastic effect 0=5187
- polyvinyl acetate, relax. investigation 2=8141
- polyvinyl acetate solns., dielec. props. 0=6801
- polyvinyl acetate suspension, light scatt. 3=11941
- polyvinyl alcohol aqueous soln. effect of γ -rays 0=21292
- polyvinyl alcohol, elec. resist. rel. to sorbed water 2=6429
- polyvinyl alcohol film, rel. to gel formation 4=10664
- poly-vinyl alcohol, i.r. spectrum, effect of pressure 4=22908
- polyvinylalcohol, irradiated, paramagnetic resonance spectra 1=20226
- polyvinyl alcohol, optical retardation plates 1=11846
- polyvinyl alcohol, use as base of nuclear track emulsions 0=3899
- polyvinyl alcohol, use in photog. emulsions 0=12739
- polyvinylamine hydrochloride soln., dielec. props. 3=16635
- polyvinyl butyral in butyl or ethyl alcohol, etchant 2=6334
- polyvinyl butyral, dielec. loss, α - and β -dispersions 1=19921
- polyvinylbutyral, in various solvents, optical anisotropy 4=25788
- polyvinyl-butylate, -propionate, -acetate, mol. optical anisotropy 4=22444
- polyvinylbutyrate, in various solvents, optical anisotropy 4=25788
- polyvinylcarbazol in benzol, glass transition and v.p. curve 3=8920
- polyvinylcarbazole, in benzene, vapour press., conc. and temp. depend. 4=29806

Polymers—contd

- polyvinyl chloride, change of props. by ionizing radiation 0=4310
- polyvinyl chloride, crystallization, effect of ultrasonics 2=833
- polyvinyl chloride "cokes", paramag. resonance 0=10213
- polyvinyl chloride, colour change on electron bombardment 1=10103
- polyvinyl chloride, complex shear modulus, freq. and temp. depend. 4=15714
- polyvinyl chloride, dichroism of 603 cm^{-1} band 1=7712
- polyvinylchloride, dynamic bulk and shear viscosity 1=20343
- polyvinyl chloride, dynamic mechanical props. during gelation 1=18349
- polyvinylchloride, dynamic and shear viscosities 1=18351
- polyvinylchloride, elastic constants, 50-1000c/s -80- + 100°C 3=6776
- polyvinyl chloride, electrification, after heat treatment 0=16008
- polyvinyl chloride, frictional props. 3=11192
- polyvinyl chloride, γ -irradiated, e.s.r. 0=18221
- polyvinyl chloride, γ -irradiated, effect of gases 0=4732
- polyvinyl chloride, under tension, appearance of cracks 0=10273
- polyvinyl chloride gels, viscoelastic props. 2=23979
- polyvinylchloride, knitted, triboelectric properties 1=17859
- polyvinyl chloride, relax. investigation 2=8141
- polyvinyl chloride, rheological behaviour rel. to temp. 1=20346
- polyvinyl chloride, transition studies 0=6375
- polyvinyl chloride, X-irrad., e.s.r. anomalous results 2=775
- polyvinylidene chloride electroluminescence 4=22938
- polyvinylene, absorption bands and formation rate 4=3951
- polyvinylene foil, photoelectricity, cond., optical props. 4=12995
- polyvinylene, resistivity 3=4936
- polyvinylidene fluoride, dielectric props., 50 c/s to 8800 Mc/s 1=11333
- polyvinyl-iso-butyl ether, relax. investigation 2=8141
- polyvinylmethyl ether, relax. investigation 2=8141
- polyvinyl-n-butyl ether, relax. investigation 2=8141
- polyvinylpyrrolidon, refractive index of dilute aqueous solutions 1=18410
- polyvinyl pyrrolidone soln., dielec. props. 3=16635
- polyvinyl stearate, dielectric props., side-chain crystallinity 1=11334
- polyvinyl sulphonate alkali halides, excluded vol. study 2=11367
- polyvinyl tertiary butyl ether, relax. investigation 2=8141
- polyvinyl toluene, decay time 2=21278
- polyvinyltoluene soln., light scatt. 3=5530
- positronium formation in, effect of static elec. field 1=8901
- preferential adsorption in mixed solvents 2=13330
- proton mag. relax. effect of tacticity 2=4290
- proton polarization, meas. by neutron irrad. 3=10114
- proton spin decoupling in n.m.r. structure studies 3=25158
- p.v.c., crystallite growth, increase by 1 Mc/s u.s. irradiation 3=13419
- radii of gyration for random flight chains 3=15403
- radiochemical grafting after irradiation at low temp. 1=20765
- radius of gyration of chains segment density and excluded vol. effects 2=16575
- radius of gyration of polymer chains 2=3803
- random flight chains, q-dimensional excluded volume 1=12337
- random scission, average degree of polymerization 3=10560
- reaction kinetics, effects of neighbouring groups 3=8949-51
- reaction kinetics of long chain molecules 3=5157
- real chain, principal polarizabilities, difference 4=20680
- recent investigations, review 1=4074
- relaxation investigations, review 2=8141
- relaxation phenomena (conference, Japan) 1=6449
- relaxation phenomena, molecular theory 1=7505
- relaxation properties, linear dipole chain model 3=21387
- relaxation, thermodynamic consts. and activation parameters 3=6780
- relaxation time spectra of crystalline polymers, appl. of viscoelastic superposition principle 1=7820

Polymers—contd

- solutions, effect of non-solvents on glassing temp. and breaking stress 4=20827
 solutions of flexible chain molecules, compression 1=2753
 solution, flow birefringence 1=15878
 solutions, H bonding 2=19555
 solutions, hydrodynamics 2=11330
 solutions, idealized relaxation spectrum 1=15884
 solutions, lattice model theory 2=17457
 solutions, long- and short-range interactions, review 1=3578
 solutions, Monte Carlo calc. of dynamics 2=1144
 solutions, Newtonian flow deviation, check 2=9273
 solutions, normal stresses, in steady flow 0=3497
 solutions in poor solvents, intrinsic viscosities 3=21350
 solutions, scatt. of light, apparatus 2=7407
 solutions, second osmotic virial coeffs. rel. to mol. weight 3=3802
 solutions, second virial coeff., effect of heterogeneity 4=27159
 solutions, sedimentation of microscopic spheres 0=76
 solutions, shear degradation 0=3522
 solutions, specific vol., apparent 3=14154
 solutions, streaming birefringence, anisotropy 3=16618
 solutions, stress analysis, rheogoniometer 4=114
 solutions, structure, light scatt., in elec. field 4=24180
 solutions, theory 0=14629
 solutions, theory 1=12875
 solutions, thermodynamic props., osmosis, light scatt. meas. 4=2669
 solutions, thermodynamics of aggregation 1=9388
 solutions, thermodynamics, calc. 4=14138
 solutions, u. s. absorpt. spectra, configuration jumping effect 4=2671
 solutions, u. s. absorption rel. to frequency 4=5172
 solutions, u. s. absorption, network diffusion model 4=11196
 solutions, u. s. cavitation, degradation 3=23878
 solutions, u. s. velo. 3=14161
 solutions, viscoelasticity 4=8174
 solutions, viscosities and heats of activation 2=21890
 solutions, viscosities near crit. temp. 3=21349
 solutions, viscosity, Huggins const. calc. 4=2661
 solutions, viscosity, statistical mech. theory 2=11368
 solutions, viscosity rel. to temperature 3=18811
 sorption in polymer-vapour systems 1=15168
 spherulites, lamella twist 4=26581
 spherulitic crystallization, fractionation and impurity segregation, kinetic and morphological effects 4=15753-4
 statistics of configuration and free volume of molecule with solvent interaction 3=10562
 statistics of isotactic deformable chains 0=20697
 statistics of orientation effects 1=12341
 statistics of random placement on linear lattice 3=9357
 stereoregular, characterization 2=2449
 stereospecific, and Markoff chains 1=9156
 stochastic processes 3=8320
 stress analysis conference, Keele, Staffs. April (1960) 1=2500
 stress analysis, dynamic problems, conference 3=13342
 stress and strain birefringence meas. 1=7703
 stretched chain configuration, hindering pot. 2=6240
 stretched, longit. wave propag. 0=18251
 structural transforms, accel. by periodically acting forces during crystallization 2=23802
 structure, by light scattering 3=16127
 styrene-butadiene, bulk modulus by "suspension method" 1=12578
 styrene-butadiene rubber, deformations 2=6732
 styrene derivatives and copolymers, photoelastic properties 0=8257
 styrene, polymerization 9=8316-17
 styrene, polymerization, n. m. r. investigation 2=4544
 styrolene, grafting on to polyethylene after low temp. irradiation 1=20765
 superconductivity, possible, BCS theory 4=18541
 super-molecular structures, control by crystallization embryo introduction 4=29152
 surface charge on separation from metal, meas. 4=7695
 suspensions, in liquid dielectrics, nonuniform elec. field effects 0=10665
 suspensions, multiple light scattering 1=244
 syndiotactic vinyl, dipole moment, end-to-end distance, calc. 4=30491
 synthetic, solutions, effect of ionizing radiations 0=21294

Polymers—contd

- relaxation time spectrum, heuristic deriv. 3=4794
 relaxations of the chain, Fokker-Planck eqn. 1=7506
 resistivity, effect of drying techniques 3=4936
 rhodamine B, phosphoresc. rel. to vitrification 2=15079
 rhoduline orange, phosphoresc. rel. to vitrification 2=15079
 rigid, rodlike, in soln., viscosity 3=135
 rubber elasticity, liquid-like theory 2=8140
 rubber-like, viscoelastic behaviour 3=11167
 rubber, tearing, molecular mechanism 3=5074
 rubbery, mechanical and dielectric losses, -180° to 25°C 4=15713
 rubeanato-Cu(II), electrical conductivity 1=8928
 scattering of light by inhomogeneous films 2=14658
 scattering of light, theory 3=9623
 scintillators, pulse-shape discrimination 1=3078
 scintillators, review 1=2462
 second-order transition, analysis and effect on mechanical props. 1=7879
 secondary electron emission 0=17032
 sedimentation const. of broken chains and wormlike coils, calc. 2=23973
 sedimentation of mixture, rel. to mol. wt. distrib. 3=23554
 segmental motion, rel. to hindered rotation 4=6673
 semiconducting 4=22732
 semiconducting coordination, Cu derivative 3=22950
 semiconducting, derived from nitriles, thermoelectric power, thermal cond., and elec. resistivity 4=20228
 semiconducting, elec. props. 4=30631
 semiconducting, highly conjugated, synthesis and props. 3=10837
 semiconducting, organic, piezoresistance 3=852
 semiconducting polymers derived from nitriles, thermoelectric power, thermal cond. and elec. resistivity 4=20228
 semiconduction, review 4=26068
 semiconductors, inorganic, Fermi states, calc. 3=20918
 semicrystalline, mol. struct. and dimensions 2=20892
 semicrystalline, orientation correlation function 4=26701
 semicrystalline, presence of voids in structure 1=20639
 shock loaded, molecular relaxation behaviour 1=1296
 silicone, fracture under shear 4=27151
 silicone liquids, viscoelasticity under cyclic shearing stress 0=8597
 silicone rubber, specific ht., thermal cond. 0=2276
 silicone thin films, 50-150 Å, elec. props., 77°-300° K 4=22769
 silicone thin films, 500-2500 Å, elec. props., 4°-300° K 4=22768
 silicones, phys. and elec. props. in thermal-vacuum environments 4=20414
 single crystal growth, Markoff chain model 1=20422
 single crystals, dissolution, morphology changes 4=7525
 sintering, rel. to plastic deformation 4=7380
 size and shape det. of flexible linear macromolecules 0=7823
 solid, dynamic mech. props. meas. 2=18980
 solid, dynamic modulus and loss factor, continuous determination 1=20283
 solid, fracture products, free-radical e.s.r. 4=1885
 solid, mechanical and thermal properties 0=14049-51
 solid model, mechanical breakdown 1=14909
 solid, rheology, math. theory 3=18366
 solid struct., laser scatt. exam. of changes 4=20772
 in soln., inhomogeneous field study 0=3520
 in solution, light scattering, theory 4=14141
 solutions of addition copolymers, electric birefringence, meas. 4=5179
 solutions, birefringence and viscosity, viscometer for simultaneous meas. 4=11157
 solutions of chain-polymers, radial distrib. function and osmotic press. calc. 0=14641
 solutions, conc. depend. of frictional coeff. 2=13332
 solutions, conc., structural changes rel. to ultrasonic absorpt. coeff. 4=160
 solutions, degradation by u. s. cavitation mech. 2=9278
 solutions, dilute, hydrodynamic interaction, effect on viscoelasticity 3=18810
 solutions, dilute, light scatt. photometer 4=27283
 solutions, dilute, theory, second virial coeff. calc. 0=16694
 solutions, Doppler shifts in light scattering 4=16111
 solutions, dynamic props. rel. to velocity field type 4=6670
 solutions, dynamic viscoelastic behaviour 2=15583

Polymers — contd

- teflon, adsorption of hydrogen 1=9163
 Teflon, γ -ray induced elec. conductivity 3=10874
 teflon, nuclear magnetic resonance, deuteron irradiation effects 1=9072
 tensile strength, theory 2=16964, 19063
 terephthalate, transition phenomena, mechanical dispersions 1=14851
 terylene, adsorption and diffusion of gases 2=23923
 terylene, diffusion and sorption of gases, rel. to crystallinity 1=19800
 tetrafluoroethylene-hexafluoropropylene copolymers, relaxs. 2=23903
 tetrafluoroethylene-hexafluoropropylene copolymers wetting by var. liquids 2=1127
 theory, review 1=3577
 thermal expansion, linear coeff., 76-300°K 4=12653
 thermoluminescence glow peaks after γ -irrad. 3=4994
 thermo-osmosis of gases through polymers, press. difference approach to steady state 4=29172
 thermophysical charact., simultaneous determ. rel. to temp., press. and external medium 2=17676
 thin film formation by electron bombardment 0=16360
 thixotropy, reversible transformations, theory 4=30754
 transitions by n.m.r. and dynamic mechanical methods 0=6375
 triboelectricity 3=6623
 u.s. attenuation, longitudinal waves, 250-1000 kc/s 1=2822
 uptake of Sr 4=2154
 use in fixing of electron and ion-optical images 4=4644
 variation with γ -dose of e.s.r. spectra of free radicals 3=25563
 vibrational effects in molecular exciton motion 3=10561
 vibrational spectra of disordered chains 1=12825
 vibrational spectra, theory 1=2318-19
 vinyl, irradiated, mol. wt. changes and gel data 3=17626
 vinyl, isotactic, dipole moment and end-to-end-length 1=12343-4
 vinyl, isotactic polymer, molec. length and dipole moment 1=17381
 vinyl, molecular statistics 1=4956
 vinyl, syndiotactic and isotactic, substituent dipole interactions 4=3950
 vinylic high polymers, dielectric relaxation 1=8970
 vinylidene and vinyl chlorides, copolymer, X-irradiated, e.s.r. 0=18221
 viscoelastic behaviour, review 1=15783
 viscoelastic props., dynamic, meas. apparatus 2=23729
 viscoelastic props., mol. weight effects 3=23339
 viscoelasticity of amorphous polymers, network structure model 1=7823
 viscoelasticity, mol. wt. dependence 1=14134
 viscoelasticity, molecular theory 4=28293
 viscoelasticity, relax. spectra semicrystalline 3=15978
 viscoelasticity of solutions at high press., u.s. meas. 3=14156
 viscoelasticity in temporarily crosslinked polymers, theory 4=13437
 viscosity rel. to branching prod. by high-energy irradi. 4=16095
 viscosity and glass-transition of polymer-diluent system 4=27161
 viscosity, high polymers 3=7203
 viscosity, when irradiated, branching effect 1=14135
 viscosity meas., liquid, low shear 4=5135
 viscosity rel. to molecular wt. in bulk polymers, theory 4=11187
 viscosity of molten specimens and conc. solns. 4=8179
 viscosity, non-Newtonian, rel. to molecular weight 1=18350
 viscosity of polyelectrolyte dilute solutions 1=108
 viscosity, rodlike mols., Kirkwood calc. approxs. 4=21109
 viscosity temp. invariant characteristic 4=15695
 vitreous, crazes, refractive index meas. 3=8579
 vitreous, double refraction, sign change on deformation 4=7164
 vitreous, fracture, kinetics under external load, calc. 3=20731
 vitrification 2=15079
 vulcanized rubber, dynamic bulk and shear viscosity 1=20343
 wear 1=4002

Polymers—contd

- wear 1=10223
 X-ray diffraction patterns 0=16298
 X-ray scatt. exam., colloid, fibre swelling 4=17746
 X-ray scatt. by oriented polymers 3=16088
 X-ray scatt., small-angle, evaluation 4=7660
 yeast cell, bulk modulus by "suspension method" 1=12578
 Ar. CO₂, form. by condensation in expanding gas mixtures 4=25794
 Bi, in Bi perchlorate aq. soln. 0=4247
 CMC-Na in water, γ -irradiation effect 0=2170
 H-bonded, as cause of water spectra ~ 8000 cm⁻¹ 4=21140
 (H₂O)₂ and (H₂O)₄, formation in condensing steam 4=25794
 Na-DNA, highly polymerized, elec. cond. 4=12840
 Sn, liquid, length, by e.s.r. and mag. suscept. 3=14155
 Sn-organic cpds., Mössbauer effect rel. to γ -irrad. 3=17633
 Sn organic cpds. with divalent Sn, Mössbauer obs. 4=25717
 [SN]₂, semiconductivity and spectra 4=15545
- Polymorphism**

Positive ray sources

See Ion sources.

Positronium

- annihilation in solid dielectrics, effect of elec. field 1=19754
- annihilation, 3-photon, in P-state 0=11152
- annihilation, two-photon polarization, demonstration of qu. mechanics in the large 1=3232
- Bethe—Salpeter eqn., ang. variable separation 4=11901
- in cholesteryl acetate, decay times, temp. depend. 4=2652
- decay in ice—water system 4=3393
- decay in molecular substances 0=20115
- decay of ¹S state, 3γ, rel. to charge conjug. invariance 4=889
- decay in Teflon 3=4380
- decay in Teflon, effect of lattice transitions 3=10636
- decay in water, mag. quenching meas. 4=21844
- energy levels, Coulombic corrections 1=16764
- energy levels, by Regge poles and perturbation theory 3=17202

Positronium—contd

- energy spectrum, calc. using Regge trajectories 4=6031
- energy spectrum, influence of weak mag. field 4=25072
- formation in damped anthracene 2=9827
- formation in an electron gas, unlikelihood 0=2533
- formation by fast positrons in H atoms, calc. 4=9184
- formation in gases in strong elec. fields 2=3325
- formation in halogen derivatives of benzene 2=3324
- formation in He, calc. 1=8448
- formation in In, water and aq. solns. 0=9343
- formation in mag. field meas. of positron polarization 4=6027
- formation in polymers, effect of static elec. field 1=8901
- formation in positron scattering 0=5550
- formation and quenching in Ar and N₂ 4=6028
- formation and quenching in Ar, N₂ and O₂, by positron lifetime method 4=19496
- formation and quenching in Ar, N₂ and O₂, by three-photon coinc. method 4=19495
- fundamental const. α, rel. to atomic collisions 4=25129
- ground state, approx. soln. of Bethe—Salpeter eqn. 1=12050
- lifetime in plastic insulators 1=19918
- Lyman α spectral line, det. attempt 3=7839
- magnetic moment 0=17317
- magnetic quenching in solids, e⁺ helicity 3=5992
- in metals, props. 0=13520
- ortho, pick-off quenching in He 3=2252
- orthopositronium lifetime in condensed H 2=22494
- orthopositronium, lifetime in liquid He 0=1274
- orthopositronium, reaction with oxygen 0=2392
- oxidation in chloride solns. 1=18436
- oxidation rates in aqueous solns. 3=8955
- para and ortho ground states, effects of pseudoscalar zero-mass meson 4=24989
- photon model, in extreme relativistic limit 2=3297
- in plasma, H, formation, ionization, excitation 4=18921
- plasma, Maxwellian solns. 2=15910
- positron—H scatt., effect 2=3319
- quenching of ortho-positronium in gases 2=277
- reactions in aqueous solutions, 3γ e⁺ annihilation speed 1=462
- scatt. by H atoms, of low-energy ortho-positronium calc. 1=13403
- scattering, ortho-positronium on He atoms 2=9829
- self-consistent field theory appl. 2=5564
- singlet and triplet state populations 2=22490
- in solids, lifetime, long tail anomaly 4=6030
- spectrum, and i. r. divergence 3=10102
- spectrum, i. r. singularities 3=22114
- Al₂O₃, formation and dynamics 3=25264
- e⁺e⁺, simple analytic approx. 3=10484
- in LiH, energetic likelihood in crystal potential 4=20260

Positrons

- See also Electron pairs; and Electrons, which includes both negative and positive electrons when the differences between them are of no special significance.
- acceleration in microtron 4=21606
- angular distrib. asymmetry in π—μ—e decay 0=15378
- annihilation in alkali halides, γ-ray ang. correl. 1=954
- annihilation in alkali metal hydrides 4=28436
- annihilation in anthracene, disorder effects 1=17524
- annihilation distrib., inhomog. distrib. of positron emitter 3=21198
- annihilation, 800 MeV, and quantum electrodynamics test 4=27832
- annihilation at 15 MeV, photon line width 2=9828
- annihilation in flight, 2-10 GeV 2=22491
- annihilation in flight at 8.5 MeV, diff. cross-section at 0° 1=2043
- annihilation in flight of 800 MeV positrons 4=3391
- annihilation in flight, meas. and theory 1=16762
- annihilation-in flight, polarization 0=17311
- annihilation in flight to produce monochromatic photons 1=13372
- annihilation in flight at relativistic energy, photon yield and energy spread 1=2044
- annihilation, influence of Z, energy of nucleus 2=20601
- annihilation in In, water and eq. solns., ang. correl. of 2-quantum emission 0=9343

Positrons—contd

annihilation in ionized gas 3=2249
 annihilation by K-shell electrons, single quantum, calc. 4=28154
 annihilation in LiH and NaH, two-photon ang. correl. 1=7569
 annihilation in liquid He and gaseous He at low temp. 0=1274
 annihilation in magnetized iron, polarized positrons 1=19753
 annihilation in metals, theory 0=3960
 annihilation in Na, γ -ray ang. correl., Fermi surface anisotropy 1=12367
 annihilation in neutron-damaged anthracene 2=9827
 annihilation, one-photon, theory 0=5892
 annihilation in organic cpds. 2=15158
 annihilation in organic liquids 0=3959
 annihilation in organic liquids 1=4363
 annihilation, use in photon source 0=7320
 annihilation in polyatomic gases, meas. 4=11259
 annihilation radiation, ang. distrib. 3=7835
 annihilation radiation, linear polarization meas. 0=17312
 annihilation radiation from metals, ang. correl. 3=25263
 annihilation radiation in plastic insulators 1=19918
 annihilation in S and S cpds., γ -ray ang. correl. similarity of S^{2-} and Cl^- ions 0=15336
 annihilation in silica and aq. solns., γ -ray ang. correl. 1=5715
 annihilation, single-quantum, cross-section 2=1679
 annihilation, single-quantum, Z-depend. 3=22111
 annihilation in solid and liq. Hg 3=12954
 annihilation, time distrib., water and organic solutions 3=24707
 annihilation, in water and ice, in external mag. field 2=13776
 beams, collision with electron beams, μ pair production, QED validity 0=17372
 beams, collision with electron beams, radiative corrections calc. 0=17304
 bound state with H atom discounted 1=4263
 bremsstrahlung spectrum, h.f. region calc. 4=11965
 collisions with electrons, π^0 prod., proposed lifetime meas. 0=17375
 containment in a mirror machine 0=19654
 depolarization by bremsstrahlung 4=19492
 depolarization in matter 4=25069
 depolarization in Möller and Bhabha scatt. 3=14960
 depolarization on slowing down in matter, calc. 4=25917
 detection in β -ray spectrometer 3=19617
 detection, simultaneous, of 20 e^+ -emitting sources 3=12610
 diffusion in solids, lifetime, long tail anomaly 4=6030
 $e^+ + e^- \rightarrow \pi^+ + \pi^0 + \pi^-$, cross section 2=5628
 $e^+ - p$, $e^- - p$ scatt. ratio, meas. as one 4=16879
 early work 2=276
 $p - e^- - e^+$ system, binding energy 0=9727
 electron-positron collisions, pion prod. 1=10905
 electron-positron scattering, non-local effects 0=2527
 emitted from negative β -emitters 0=17529
 emitter activation cross-section, absolute determ., from (n, 2n) and $Ni^{58}(n, p)Co^{58}$ reactions 4=1086
 Feynman diagrams, majorization 1=3124
 Feynman diagrams, majorization 1=9727
 helicity, by Bhabha scattering 1=7229
 helicity, from positronium mag. quenching in solids 3=5992
 high-energy beam collision with electrons, possible expts., theory 1=12077
 high-energy $e^+ - e^-$ beam collisions, possible expts. 2=275
 improved detection by image intensifier 1=13213
 lifetime in anthracene near melting pt. 0=5549
 lifetime curves in Ar, fine structure 4=15047
 lifetime in 18 metals, comparison with theory 0=17980
 lifetime meas. 3=19149
 lifetime in metals 1=489
 lifetime in oxidizing (chloride) solns. 1=18436
 lifetime, in solids and liquids, var. with pressure 3=10099
 lifetime in solids, theory and expt. 2=6306
 lifetimes in aqueous solutions 3=8955
 lifetimes in metals 2=593
 lifetimes in metals, rel. to electron density distrib. 2=12405
 mean lines in Al and alkali metals 0=9342
 mean lives in metals, meas. apparatus 2=9500

Positrons—contd

from meteorites, γ - γ coincidences 2=4751
 monochromator, orange-sector 2=3320
 monoenergetic, from Eu^{152} decay 1=19401

 atoms, resonance fluorescence 1=4908

Potassium—contd

atoms, scatt. by Xe, velocity depend. of cross-section 3=711
 atoms, single scattering by Hg atoms 0=5866
 atoms, surface ionization on W 3=9733
 Auger yield in X-ray photoeffect 3=14633
 beams, adsorption on surfaces 2=21570
 charge exchange, resonance, between K ions and atoms 1=13070
 colloids in KN₃, e.s.r. 4=26422
 Compton incoherent scatt. function for K⁺ 0=8196
 condensation coefficient calc. 4=21359
 condensed films, polymorphism 0=21252
 conductivity, press. effect 4=20332
 corresponding states behaviour 4=24460
 coupling parameter, semi-empirical determ. 4=1380
 crystal growth by condensation on Ag wire, in super-saturated vapour 0=18309
 crystal growth from vapour, meas. 3=3271
 crystals, growth and evaporation 0=13961
 cyclotron resonance, Azbel'-Kaner meas. 4=6816
 de Haas-van Alphen effect 1=12515
 de Haas-van Alphen effect, in steady mag. fields 4=26263
 deformation, elec. cond., 4.2-195°K 0=1850
 deformation at low temps., tensile and resistivity expts. 0=16215
 density of solutions in ammonia 1=4332
 desorption from W, in elec. fld, 77° to 1050°K 4=4675
 desorption kinetics of ions from Re 4=2129
 diffusion and desorption in Pt, thermionic emission study 0=6061
 elastic consts., central force contrib. 2=4310
 elec. cond. 0=15826
 elec. discharge, r.f., in const. mag. field 2=164
 elec. resist., effect of pressure at low temps. 3=828
 elec. resistance, pressure depend. over 500 kbar 4=1559
 electrical resistance changes at He temp. in pulsed mag. fields 4=4121
 electrokinetic effects in liquid metal, calc. 0=5268
 electrolytic cell, conc., with Na 4=26756
 electrolytic cell, NaCl-KCl with collodion or paraffin membranes 4=26757
 electron beam loss spectrum, plasma osc. peaks 4=28514
 electron beam, 2.8 MeV, energy loss, theory and expt. 1=18935
 electron emission, secondary 2=17877
 electron energy loss spectra 2=3888
 electron gas modified calc. 1=14232
 electron scatt. at low energy by atomic beam 0=4166
 electrons, optical effective mass 4=12666
 excitation and ionization in solar flares and prominences 2=15355
 excited bound states, eigenvalues 0=2725
 films, elec. resist. rel. to thickness non-uniformity 2=12491
 films, elec. resistance, thermoelec. power 2=6405
 films, elec. resistance, thickness depend. 0=1615
 films, on KCl, elec. cond., annealing effect 4=4122
 films, optical consts, 20° to 60°C 3=25437
 in flame gases, at high concn., elec. cond. 1=8167
 flame resonance lines, optical cross-sections 1=8815
 fusion curves, to 5kb 2=17688
 Hall effect, high-field, at 4.2°K 3=840
 heat of fusion using Calvet microcalorimeter 4=14434
 helicon wave-sound wave interaction 4=22549
 hyperfine and Zeeman resonances 0=17694
 ion and electron emission, on Pt wire, abrupt changes 4=11689
 ion emission, thermal, isotope effects 4=24749
 ion, mobility N and Ne 0=1103
 ion, positive, resonance charge multiplication, by atom bombard. 0=8988
 ionization, Auger effect 3=12069
 ionization, single and double, electron impact 2=1392
 ionization, surface by diffusion through a Globar 4=16546
 ions, bombard. metals, secondary electron emission 4=8822
 ions, K⁺, resonance charge exchange, 900-2400 eV 4=18692
 ions, K⁺, double charge exchange in gases 1=18780
 ions, K⁺ in Hg gas, kinetics 0=3742
 ions K⁺, in N₂ gas, mobility meas. by "time of flight" apparatus 3=7437

Potassium—contd

ions, K⁺ photoemission from layer adsorbed on Pt 2=22272
 ions, K⁴², range in Al 3=12608
 ions, range in gases and solids 2=7674
 ions, reflection and electron ejection from Mo, comparison with inert gas ions and atoms 4=5719
 isotope separation for K amalgam—aq. KOH 1=10291
 isotope separation by KCl evaporation 2=6114
 isotope separation in liq. by elec. current 2=10229
 isotope separation, by vacuum evap. of molten K 0=7709
 isotopic composition 0=13395
 Knight shift 1=2498
 lattice vibr., rel. to Toya's electron—phonon interact. 4=20196
 liquid, critical consts., calc. from quasi-f.c.c. lattice model with vacancies 1=1739
 liquid, magnetically induced sound absorption 4=14283
 liquid, viscosity meas. 2=7182
 liquid, X-ray structure investigation 0=16692
 luminescence, gaseous, quenching, with N₂, CO₂, var. with relative vel. of collision partners 4=3807
 melting point, at 0-30 000 kg/cm² 0=15808
 metal, electron wave-functions 0=13517
 in meteorites age determination 0=7,4882
 meteorites, iron, isotope abundance rel. to radiation age 2=2532
 molecular beams, reaction with HBr 3=6914
 molecular beams, wide-angle scattering 3=6439
 molecule, K₂, potential energies and dissociation 4=15384
 molten, self-diffusion 3=16610-11
 molten, thermal props. 2=17445
 moving edge dislocations 3=10654
 n.m.r., Knight shift rel. to KCl 1=20264
 needle-shaped crystal growth 4=26606
 nuclear reactor working fluid, boiling, for light space systems 4=12322
 opt. constants, direction meas. in u.v. 0=16034
 optical constants, Drude theory analysis 3=17975
 optical constants of solid and liq., meas. 3=17974
 optical props. in far u.v. 0=18117
 orthogonalized plane wave form factors 3=25229
 photoelectric effect, internal, rel. to frequ. 3=17976
 photoelectricity, inner, var. with wavelength 3=22897
 photoelectron emission, from films, depth depend. 2=1482
 photoelectron vol. emission, energy distrib. calc. 2=3075
 plasma, ion waves, l.f. 3=16964
 plasma instability in mag. field for any density 4=19044
 plasma, ion acoustic waves, Landau damping meas. 4=8752
 plasma production by seeding (CN)₂-O₂ flame 2=3036
 plasma seeded with K, elec. conductivity calc. 1=16309
 plasma, thermal, l.f. oscillations 3=9820
 positive ions, 5-25 keV, sputtering of Cu 1=8363
 positron mean life 0=9342
 potassium fluorosilicate in solution in KBr equilibrium reactions 1=20722
 residual resistivity 0=20870
 resistivity, elec., effect of capillary constraints 3=7410
 resonance fluorescence of vapour 1=4469
 resonance spectrum, effect of A at press. up to 1500 atm 0=5882
 solid, lattice vibr. spectrum and specific heat 1=17400
 solution in liq. NH₃, decomp. 2=10971
 specific heat calc., Toya's method 3=10599
 specific heat, 0.15-1°K 0=9858
 specific heat, 0.2°-4.2°K, analysis 4=12643
 specific heat calc. from elastic consts. 2=8166
 spectral lines, electron beam excitation 0=1478
 sputtering by noble-gas ions 1=11986
 sputtering by rare gas ions 2=3093
 sputtering of W, var. ion energy, temp. 4=19127
 surface adsorption, desorption, ionization and diffusion on W, var. temp., K flux 4=23610
 surface ionization 2=1100°-1200°K 2=13546
 surface ionization on W 0=10873
 thermoelectric power of boundary atoms 3=17968
 thermoelectric power at low temp., expt. and theory 1=17814
 thin films, structure, elec. and optical props. 3=18385-89
 thin films, structure, elec. and optical props. 3=18391-2
 third virial coeff. and vapour pressure 4=230

Potassium—contd

ultrasonic attenuation in liquid K 4=2676
 upper atmospheric rel. abundance 2=24028
 u.s. velocity Rao's consts. 2=15589
 vacuum deposition 3=11844
 vapour atmosphere, effect on pyrometric meas. 4=5429
 vapour, energy transfer in collisions 4=15289
 vapour, ionization, absolute cross-section 4=14573
 vapour, multiple, by Auger effect, meas. 4=11520
 vapour plasma, fully ionized, transport props. meas. 4=11587
 vapour pressure, correlation, 3=14423
 vapour press. eqn. dissociation energy 2=1312
 whisker growth from vapour by field emission 3=3276
 whiskers, growth 1=20445-6
 whiskers; growth, evaporation kinetics and surf. diffusion 4=4559
 work function, temp. depend. meas. 2=1476
 K, cosmogenic, in meteorites 1=18060
 K, ion analysis following Ar⁴¹ β⁻ decay 3=19954
 K⁺, backscattering from W, Ta, Mo, Ti and Ni targets rel. to temp. 4=8854
 K⁺, hydration energy 1=15196
 K⁺ ions, resonance charge transfer, cross-section meas., with K beam 1=278
 K⁺, resonance charge transfer, in K beam 1=4566
 K II Stark broadening in fully ionized plasma 4=18853
 K³⁹, 5²P_{1/2} level h.f.s. 1=11064
 K³⁹ mag.^{1/2} dipole transitions, g_J factors from e.s.r. 1=9914
 K + CH₃I, reactive collisions in molecular beams 4=28290
 K-Cl₂ and K-HI collision processes in beams 2=532
 K-He gas mixture, propag. of ultrasonics 0=14721
 K-Hg system, intermolecular pot. well. 2=18497
 K-Na, liquid eutectic, electrokinetic effects, structural viscosity 4=24230
 NH₃ soln., e.s.r., effect of adding KI 3=11811
 Xe-K mixture, viscosity and thermal cond. 1=159

Potassium compounds
 alloys, superconductivity 3=16873
 amagone, colour, cause 2=12612
 azide, cryst., i.r. spectrum 3=18004
 azide, spectra, colour centre formation 0=8008
 Br, V₄-centre, bleaching and symm. props. 2=18621
 crystalline, organic, Raman spectra compared with solutions 3=6650
 cyanides of Fe, Mn and Ni, photoconductivity and Hall effect 0=4372
 dihydrogen arsenate and phosphate, u.v. transission 0=13686
 halide monocrystals, i.r. absorption, effect of anionic impurities, temp. depend. 0=6177
 halides, crystal growth, by floating zones 3=6825
 halides, crystals, with O complexes, absorption spectrum, photochem. 0=8009
 halides, dielect. strength, -130 to 150°C 0=1708
 halides, diffusion of Ar, prod. by n irradi. 3=15508
 halides, effect of Tl doping on colour-centre props. 0=16065
 halides, F-centres, short-wave absorption, higher excited states 0=17956
 halides, lattice vibrations and specific heats, calc. 0=13480
 halides, polymorphic transition 0=16037
 halides, recombination luminescence, mechanism, with Ga, Ge, In, Sn, Tl, Pb activators 0=20996
 halides, temp. dependence of elec. strength 0=7987
 halides, X-ray absorption spectra 2=3889
 halides, zone refined, ionic conductivity 0=7916
 iodide—tri-iodide solion electrochemical diode 3=16887
 muscovite, outgassing props. 2=21960
 nitrate melts, crystal structure 1=16175
 orthovanadate, e.s.r. of (MnO₄)³⁻ in 0=20169-70
 pentaborate, crystal structure 0=4644
 pentaborate, vitreous α-phase, density, unit cell and i.r. absorption 0=6360
 porcelain, microstructure 4=26699
 potash alum, etch pits rel. to defects 3=23386
 potassium dihydrogen phosphate, i.r. band spectra 1=11377
 tartrate, elastic moduli, u.s. pulse meas. 0=13896
 thiocyanate complexes, vibn. spectrum, structure 3=3012
 Tutton salts, K Zn(SO₄)₂·6H₂O and K₂Mg(SO₄)₂·6H₂O, proton mag.² resonance 3=8740

Potassium compounds—contd

- Tutton's salts, water of cryst., proton-proton vector orientations 4=10450
 K acetate, proton magnetic resonance, rel. to temp. 1=20275
 K acetate u.s. vel. 2=15589
 K acid phthalate, cleavage plane grating spacing 4=4583
 K alum, diamond-like etch figures 1=14957
 K alum, Raman spectrum, polarization 2=6586
 K-alkylated amines, e.s.r. absorpt. spectra 4=18216
 K chrome alum, paramag. resonance, elec. field effects, 4-300°K 1=5071
 K chromicyanide, paramag. relax. at low temp. 2=4271
 K dihydrogen phosphate, continuous-wave optical harmonics 4=8366
 K dihydrogen phosphate, ordinary and extraordinary refractive indices 4=10184
 K dihydrogen phosphate, relaxation in extreme i.r. 3=17942
 K ethylamine solns., e.s.r. and absorpt. spectrum decay and mols. present 4=21156
 K ferricyanide, elec. cond. and photocond. 2=3999
 K ferricyanide, mag. d-wave functions 2=18509
 K ferricyanide, paramag. relax. at low temp. 2=4271
 K ferrocyanide, Fe⁵⁷ nuclear resonance scattering, diffraction 4=22464
 K ferrocyanide, spectrum in far i.r. 1=14598
 K ferrocyanides, with D₂O of crystallization, ferroelec. props. 1=17838
 K fluorenone, e.s.r., dimers 2=23012
 K formate, acetate and propionate, u.s. props. 3=14162
 K halide crystals, interaction of slow electrons 1=7573
 K halide crystals, u.v.-irradiated, delayed electron emission 1=10069
 K halides, coloured, pulse and steady photocond. 2=8424
 K halides, doped with O, S, Se, Te, optical props. 3=2999
 K halides, doped, X-ray irradi., trapped paramag. N oxides, e.s.r. 1=14350
 K halides, F-centre absorpt. and emission, temp. depend. 4=25970
 K halides, F-centre effects on elec. conductivity 4=20314
 K halides, F- and M-centre processes, photo-chemical 4=10003
 K halides, intrinsic optical props. 3=25433
 K halides, ion and electron emission, on Pt wire, abrupt changes 4=11689
 K halides, molten, solubility of rare gases 1=4335
 K halides, nitrogen centres, e.s.r. meas. 4=26416
 K halides, recombination luminescence 3=3034
 K halides, sp. ht. rel. to spectroscopic behaviour 3=765
 K halides, X-ray K-absorpt of K 3=6662
 K hyaluronate, electromech. effect during flow in solns. 2=858
 K manganicyanide, polarized i.r. absorption spectrum 1=3846
 K nitrosodisulphanate aqueous solution, O₂ electron spin relaxation 4=2711
 K perchlorate in KNO₃, heats of soln. and dil., interaction parameters of liq.-liq. mixtures 4=10631
 K perrhenate in KNO₃, heats of soln. and dil., interaction parameters of liq.-liq. mixtures 4=10631
 K uranyl sulphate, fluorescence spectra 1=14638
 K waterglass binder films on fluorescent screens 2=6616
 KAl alum, surface properties 0=9838
 KAlO₂, i.r. absorption spectrum 2=2239
 KAl(SO₄)₂.12H₂O, rel. to movement and faceting 3=16034
 KAuC₄, Cl³⁵ n.q.r., +18° to -196°C 4=12520
 KAuC₄, in HCl, u.v. spectrum 1=12885
 KB₂O₃.4H₂O 3=13477
 KB₂O₃.4H₂O, heat capacity meas. from 15° to 370°K, thermodynamic functions calc. 4=30517
 K-Ba, Sr or Pb Fe garnet, magnetic exchange anisotropy 4=13230
 β-K₃Bi crystal structure 3=20841
 (K_{0.5}Bi_{0.5})TiO₃, lattice parameters 3=20851
 (K_{0.5}Bi_{0.5})TiO₃, phase transformations, 270° and 410° C 3=20851
 KBr, activated, luminesc. mechanism 2=6594
 KBr, additively coloured, photocapacitance effects 2=23468
 KBr, additively coloured, pulse photoconductivity 1=11232
 KBr, α and β absorpt. bands in vacuum u.v. 3=8580

Potassium compounds—contd

- KBr, α-centres, fluorescence 3=17796
 KBr, α-irradiated, thermoluminescent kinetics 4=13084
 KBr, anion vacancy formation, effect of impurity ions 2=2077
 KBr, anisotropy of elec. strength 2=6528
 KBr, with Br⁻ ions, hole photocond. 2=8425
 KBr, breakdown discharge form. 2=21222
 KBr; breakdown energy 0=16026
 KBr, coloration near fundamental edge 3=15517
 KBr, colour centres due to electron pulses 3=8460
 KBr, colour centres, H, V and F, low-temp props. 0=9910
 KBr, colour centres, photochemically produced 1=7601
 KBr, crystals, growth and darkenability 1=14980
 KBr crystals, Raman spectrum 4=22883
 KBr, dendritic growth, rel. to conc. distrib. in soln. 2=23818
 KBr, diel. relax. in coloured crysts. 2=23491
 KBr, dielec. strength, temp. depend. 0=1707
 KBr, diel. relaxation in coloured crystals 3=6613
 KBr, dielectric const., 8 mm, by shorted-line wave-guide 3=22973
 KBr, dielectric properties and optical absorption, rel. to fast electron irradi. 4=1651
 KBr, diffusion of Tl⁺ ions meas. 3=6536
 KBr, diffusion of Tl⁺, rel. to absorpt. band 2=3946
 KBr, dispersion, 0.3-3.0 mm wavelength 0=628
 KBr, doped with NO₂, paramag. reson. 2=4248
 KBr, doped, thermal cond., use of Debye model 4=6760
 KBr, effect on latent image in Ilford C2 emulsion 0=15213
 KBr, effect of neutron irradi. on dielectric and optical props. 1=12468
 KBr, elastic consts., by diffuse X-ray reflection 4=1963
 KBr, elec. cond. of single crystals, temp. and voltage depend. 1=14392
 KBr, electrical conductivity, rel. to anion impurities 3=17944
 KBr, electrolytic coloration 0=6054
 KBr, electron and photon absorption compared in additively coloured crystals 1=11189
 KBr, electron energy loss spectra 2=3889
 KBr, equation of state, Grüneisen approx., temp. var., calc. 3=20115
 KBr, F-centre, electron-nuclear double spin reson. 2=6388
 KBr, F-centre ground-state, calc. 1=14335
 KBr, F-centre growth, exciton-induced 1=17576
 KBr, F-centre lifetime 2=6387
 KBr, F-centre prod. efficiencies at liq. He temp. 4=12810
 KBr, F-centres, electron-nuclear double reson. 2=12471
 KBr, F-centres, excited states 3=20244
 KBr, F-centres, optical pumping 4=10000
 KBr, F₂⁺-centres 3=20240
 KBr, F¹-type absorption bands 3=22840
 K Br, F¹-type absorption bands rel. to complex colour centres 3=815
 KBr films, secondary electron emission 4=8820
 KBr, 5 elastic wave surface, 1.7 Mc/s 0=17877
 KBr, formation by crossed HBr molecular beam and K atomic beam 1=6064
 KBr, fused, refractive index rel. to temperature 3=11796
 KBr, hydroxyl and U-centres, additively coloured 3=13013
 KBr, imperfection equilibria 2=23146
 KBr, interstitial ions and thermal cond. 2=21088
 KBr, ion activated luminescence centres 0=16104
 KBr, ion mobility along [100] and [111], computer calc. 4=17438
 KBr, as i.r. cell for benzosulphochlorides 2=22987
 KBr, lattice dynamics, dispersion curves 3=20074
 KBr, lattice dynamics, Green's function calc. 4=9824
 KBr, lattice freq. and amp., heat capacity 1=12353
 KBr, lattice vibration spectrum 1=14161
 KBr, Li A-centres, ENDOR study 3=25299
 KBr, luminesc. due to X-rays with elec. field 2=8575
 KBr, luminescence 1=17909
 KBr, luminescence and colour centres 2=711
 KBr, M-band, temporary bleaching 4=20317
 KBr, mobility of Br vacancies in single crysts. 2=14432
 KBr, molten, adiabatic compressibility 2=13333
 KBr, nuclear resonance absorption of ultrasound, theory and expt. compare^d 1=3597

Potassium compounds—contd

- KBr, nuclear spin-lattice relaxation time 1=3942
 KBr, optical absorption and fluorescence of O_2^- impurities 1=11363
 KBr, phase transform. rel. to press. 2=23803
 KBr, phase transformations, high-press., from compressibility, shock 3=18179
 KBr phosphors with activators, recombination luminescence spectra 4=15615
 KBr, photocond. in fundamental absorpt. range 2=8427
 KBr, photoconductive Hall effect 1=14385
 KBr, photocurrent due to strong elec. field 1=19897
 KBr, photocurrent due to strong elec. field 2=8433
 KBr, polaron energy spectrum 0=15836
 KBr, polaron mobility, temp. depend. 1=950
 KBr, prebreakdown currents 0=20962
 KBr, r.f. dielec. dispersion at high temps. 4=26106
 KBr, Raman spectra, theory 4=26169
 KBr, reflectivity, restrahlen bands 2=2218
 KBr, re-orientation rel. to abrasion 2=19033
 KBr sandwiches with KCl filling, defect hole distrib. in KBr rel. to elec. field 4=29171
 KBr, secondary electron emission 012628
 KBr, secondary electron emission region, thickness and efficiency 3=19323
 KBr, secondary emission, by K ions 3=16978
 KBr, soln. in liq. K, elec. cond. rel. to conc. 2=21921
 KBr, solns., observation of crystal nucleation 0=10279
 KBr, solubility in NH_3 2=15576
 KBr, sp. ht. spectroscopic meas. 3=12926
 KBr, spectrum, OH⁻ ion impurity u.v. bands 4=4266
 KBr, spin-lattice relax., temp. depend. 3=11118
 KBr, surface tension of solns., meas. 0=2160
 KBr, surfaces of melt grown ingots 3=23502
 KBr, thermal expansion 0=15815
 KBr, thermal expansion, by X-ray diffr. 1=14185
 KBr, thermal expt. 4=17374
 KBr, thermal resistance, rise nr. Debye temp. 3=17670
 KBr, thermoelasticity rel. to polycryst. state 2=12841
 KBr, thermoluminesc. after plastic deform. 3=23130
 KBr, thermoluminescence, effect of illumination 4=7176
 KBr, thermoluminescence, and plastic deformation 4=17588
 KBr: Tl, colour centre diffusion in K vapour 2=3956
 KBr: Tl, colour centres, X-ray induced, at low temp. 0=1596
 KBr: Tl, emission spectrum 3=4984
 KBr: Tl, luminescence spectrum 1=17911
 KBr: Tl phosphors, absorpt. spectra 2=2233
 KBr, U-centres, exciton induced photoconductivity 1=14340
 KBr, U-centres, i.r. absorption meas. 4=1531
 KBr, U \rightarrow F conversion, quantum yield 1=8917
 KBr, U_2 -centre, e.s.r. and photochem. 3=10696
 KBr, u.s. velocity and absorption, rel. to dislocations 1=901
 KBr, uncoloured "Schubweg" determ. 2=12395
 KBr, V-centres in crystals containing Ca, Sr, Ba ions, e.s.r. and optical absorption 0=6051
 KBr, V_1 centres, photochemistry 1=7602
 KBr, X-ray line broadening, and strain 3=8934
 KBr, X-ray luminescence 1=20012
 KBr, X-ray luminescence at low temps. 4=28733
 KBr, Z_2 centres, absorption peaks rel. to Ca, Sr, Ba doping 4=28501
 KBr, zone refining 0=8167
 KBr: Ag phosphors, atomic centres 2=14728
 KBr [Cl], excited F_A colour centres, lifetime 4=25974
 KBr: In, luminesc. and electron emission 2=4167
 KBr: In, photoelectron emission and luminescence 4=1786
 KBr and KBr: Ca, M and R colour centres 1=14341
 KBr-KCl solid solns. formed by powder compression, kinetics 2=23799
 KBr-KCl solid solutions, thermal expansion 0=15815
 KBr: KH, U_2 -centres, absorption, effect of interstitials 4=7149
 KBr/KI single crystals, luminescence 1=7721
 KBr-KI mixed crystals, F-bands 3=4889
 KBr: Na, A-centres, bleaching and dichroic props. of A_1 and A_2 bands 4=6884
 KBrO₃, diamagnetic susceptibility, rel. to temp. 1=14676
 KBrO₃, impurity shift of pure quadrupole resonance 1=6438

Potassium compounds—contd

- KBrO₃, nuclear quadrupole resonance of Br^{III} 1=12576
 KBr: Pb, absorption, emission, and excitation spectra 1=17890
 KBr: Sn, luminescence at grain boundaries 1=9008
 KC(CN)₂, atomic crystal structure from X-ray investigation 4=20761
 KCN, cryst. struct. 2=10891
 KCN, interdomain symmetry in reversible transformations 1=7834
 KCN, low-temp. cryst. structure 2=15004-5
 KCN, rate of hydrolysis, ultrasonic meas. 3=8952
 KCN, single crystal growth, and purification 4=26608
 KCN, temp. cycling at thermal transformation, $\sim 110^\circ C$ domain co-existence 0=21196
 KCN, zone refining 4=8490
 KCNS, melting, effect on u.v. absorption 0=10038
 K₂CO₃, molten, struct., by X-ray diffr. 2=15565
 K₂CO₃, soln. in water, thermodynamic props. 4=21126
 K₂CO₃, thermodyn. props. at high temps. 3=22663
 K₃CO(CN)₆, Fe³⁺ e.s.r. 4=20594
 K₂C₂O₄·H₂O 3=8728
 KCaF₃, paramagnetic resonance 1=11480
 KClF₃, paramagnetic resonance 1=11480
 KCl, A-centres 1=14339
 KCl, A-centres 2=10418
 KCl, A-centres due to substitutional Na ions 1=17573
 KCl, A-centres, structure and props. 1=19810
 KCl, A- and B-centres, reversible optical conversion 1=17572
 KCl, activated, luminesc. mechanism 2=6594
 KCl, activated, thermoluminescence, relaxation 1=11408
 KCl, additively coloured, diffusion and reaction of H₂O 4=17445
 KCl, additively coloured, internal friction 3=23291
 KCl, additively coloured, M-centre formation 3=4892
 KCl, additively coloured, photoemission of electrons 3=24336
 KCl, additively coloured, thermal bleaching 2=19171
 KCl, additively coloured, transient photocond. 4=7074
 KCl, aggregation of divalent cations 2=18577
 KCl, α and β absorpt. bands in vacuum u.v. 3=8590
 KCl, α and β bands 1=993
 KCl, α -centres, fluorescence 3=17796
 KCl, α -irradiated, thermoluminescent kinetics 4=13084
 KCl, anisotropy of elec. strength 2=6528
 KCl, aq. soln., elec. cond. rel. to pressure 4=2706
 KCl, aq. soln., freezing 3=3927
 KCl, with Ba chloride, defects and precipitation of Ba 0=11627
 KCl, β -irrad., elec. charge of dust from 3=902
 KCl, birefringence induced by light in coloured crystals 4=1741
 KCl, bleaching at 77°K by F-band irrad. 3=6543
 KCl, Bordoni peaks 3=23294
 KCl, Born repulsive energy 3=2690
 KCl, breakdown discharge form. 2=21222
 KCl, breakdown energy 0=16026
 KCl, Ca-doped, dipole aggregation process 4=1652
 KCl, Ca-doped, F-centre form. 2=16670
 KCl, calc. inverse matrix of lattice eqns. 0=715
 KCl, cation and anion migration barriers 0=4306
 KCl, charge separation due to disloc. motion 4=9960
 KCl, Co⁵⁷ impurity Mössbauer expts. investigation 2=23167
 KCl, colloid centres, props. 0=11634
 KCl, coloration near fundamental edge 3=15517
 KCl colour centre absorptions, new 4=25973
 KCl, colour centre, F, struct. magneto, optical study at 1.86°K 4=17449
 KCl, colour centre prodn., rel. to γ -irrad 3=22842
 KCl, colour centres due to electron pulses 3=8460
 KCl, colour centres, e.s.r. 3=23234
 KCl, colour centres, F \rightarrow F' conversion 1=11236
 KCl, colour centres, F \rightarrow M-centre conversion 0=20833
 KCl, colour centres, F, Z_2 3=23235
 KCl, colour centres, H, V and F, low-temp. props. 0=9910
 KCl, colour centres, M, N and R₂, pressure effects to $\sim 10^4$ atm 0=13556
 KCl, colour centres, optical bleaching near 0°C temp. depend. 0=11633

Potassium compounds—contd

- KCl, colour centres, photochemically produced 1=7601
 KCl, colour centres, spin-lattice relax. 1=20245
 KCl, colour centres, spin-lattice relax. 2=14471
 KCl, colour centres, temporary optical bleaching 1=17574
 KCl, colour centres, thermal bleaching 0=11635
 KCl, colour centres, thermal equilibrium between F- and M-centres 0=7893
 KCl, colour centres, X-ray prod. 3=25297
 KCl, cond., elec., Sr doped, temp. var., and association 4=20407
 KCl containing Ca^{2+} and Sr^{2+} , Z-centre energy levels 4=28500
 KCl containing impurities, defect microscopic investigation by evaporation method 4=28451
 KCl, containing sulphate ions, ionic cond. 2=8297
 KCl, containing U centres, thermal bleaching 1=11242
 KCl, creep near m.p. under small loads 4=1961
 KCl, cross-slip on bending 2=14894
 KCl, crystal etching and polishing 3=18242
 KCl, crystal with K colloid particles 0=8296
 KCl, crystal lattice vibr. calc. 4=28361
 KCl, crystallization, initial, theory 4=26607
 KCl, crystals, cavity formation on dislocations 0=11622
 KCl crystals with colloidal K, electron microscope study 1=2555
 KCl crystals, coloured, A-centres 1=11233
 KCl crystals, effect of γ -irrad. on density 4=10015
 KCl crystals, elec. cond. rel. to plastic deformation 1=19763
 KCl crystals, electrification, effect of β -irradiation 0=10859
 KCl crystals, F-centre to M-centre photochemical conversion kinetics 4=25972
 KCl crystals, F' centres luminescence in i.r. 4=22921
 KCl crystals, γ -irrad., colour centres, thermal bleaching, influence of plastic deformation 4=30584
 KCl crystals, γ -irrad., rel. between colour centres and dislocations 4=10005
 KCl crystals, growth and darkenability 1=14980
 KCl crystals, internal friction at low temp. 0=21098
 KCl crystals with interstitial Co^{2+} , optical absorpt. spectrum of Co^{2+} , theory 4=7128
 KCl crystals, ionic cond., a.c. polarization 2=2112
 KCl crystals, M centre thermal reorientation 0=17964
 KCl crystals, M centres 1=8916
 KCl crystals with OH^- and SO_4^{2-} ions, new absorpt. bands on irradiation 2=19161
 KCl crystals, photochem. reactions 4=26760
 KCl crystals, quenching effect 0=20835
 KCl, cyclotron resonance, rel. to mag. fld 3=20149
 KCl crystals, screened Coulomb potential 4=15556
 KCl crystals, U-centre photoconductivity 1=10019
 KCl crystals, X-ray absorption peaks rel. to plasma oscillations 1=8997
 KCl cubic crystals, small, surface energy, calc. 4=7703
 KCl, Cu-doped, colour centres 1=14336
 KCl, decomposition by electron irradiation 3=17809
 KCl defect properties rel. to electrical breakdown 1=11215
 KCl defect properties rel. to electrical breakdown 1=12391
 KCl, dichroism of N, band 2=18620
 KCl, dielec. const. at high temps. 4=7033
 KCl, dielec. loss, effect of Sr content, meas. 4=28619
 KCl, dielec. strength, temp. depend. 0=1707
 KCl, dielectric const., 8 mm, by shorted-line waveguide 3=22973
 KCl, diffraction of 8-45 Mc/s ultrasound 3=12918
 KCl, diffusion of Pb ions in crystal 3=15510
 KCl, diffusion of I^- 1=7594-5
 KCl, diffusion of Tl^+ , Pb^{2+} 1=19806
 KCl, discharge path in crystal 0=19632
 KCl, dislocation etching solution 1=19792
 KCl, dislocation loops, rel. to electron bombardment 3=17808
 KCl, dislocation observation by electron microscope and electron diffraction 3=802
 KCl, dispersion, 0.3-3.0 mm wavelength 0=628
 KCl, divalent-doped, Z₁ centres, growth and bleaching 3=22846
 KCl doped crystals, anion diffusion 0=1604
 KCl, doped with KNO_3 , X-irrad., e.s.r. 3=25573
 KCl doped with NO_2 , paramag. reson. 2=4248

Potassium compounds—contd

- KCl dust, electrification by β -irrad., effect of F-centre conc. 2=8255
 KCl, e.p.r., Sr, F centres 3=23235
 KCl, e.s.r. of A-centres 2=21365
 KCl, e.s.r. of F-centres 1=20222
 KCl, edge dislocations, excitation energy, lattice positions 1=3671
 KCl, effect of imperfections on Cl ion diffusion 1=14323
 KCl, effect of pressure on elec. and mech. props. 1=11271
 KCl, elastic constants, rel. to temperature 3=18163
 KCl, elastic constants, temp. dependence 0=11968
 KCl, elastic consts., by diffuse X-ray reflection 4=1963
 KCl, elastic consts. and spec. heat at const. volume, 300°K to melting pt. 0=16207
 KCl, elec. breakdown, at super-voltages, directional effects 1=3810
 KCl, elec. cond. and colour centres 0=15880
 KCl, elec. cond. rel. to defect props. 2=8300
 KCl, elec. cond. rel. to F-centres and temp. 2=12500
 KCl, elec. cond., thermal dissociation of F-centres 1=994
 KCl, electrical conductivity, rel. to anion impurities 3=17944
 KCl, electron conduction and breakdown, rel. to γ -irradiation 3=23020
 KCl, electron density distrib. in crystals 1=15072
 KCl, electron-energy loss spectra 2=2889
 KCl, electron excess centres, e.s.r. and optical absorption 1=14330
 KCl, electron and γ -irrad., hardening and F-band coloration 3=23359
 KCl, electron Hall mobility down to 4°K 2=23472
 KCl, electron-irrad., point defects, electron microscope study 2=23222
 KCl, electron paramag. reson. props. of pure and bleached F-centres 2=6286
 KCl, electron and photon absorption compared in pure and additively coloured crystals 1=11189
 KCl, elec. strength, effect of ionic conduction 1=2435
 KCl, eqn. of state 0=2779
 KCl, equation of state, Grüneisen approx., temp. var., calc. 3=20115
 KCl, etch pits, dislocations 2=6334
 KCl, evaporation, complex-ion formation, ion-molecule reactions 0=10876
 KCl, excitons, lowest bands, calc. 1=946
 KCl, excitons, lowest state, calc. 1=944
 KCl, exo-electron emission 1=16357
 KCl, exoelectron emission spectrum 3=14618
 KCl exo-electron and photoemission 1=18920
 KCl, F-aggregate centres, thermal prod. 3=4891
 KCl, F-aggregates, equil. with F-centres 4=22631
 KCl, F-band bleaching, photoconductive sensitivity 4=20431
 KCl, F-band Faraday rotation 4=13052
 KCl, F-band growth in deformed and heat-treated crystals, due to X-ray irradiation 1=996
 KCl, F-centre association with Na^+ or Li^+ , kinetics 4=10004
 KCl, F-centre, complex nature 1=17575
 KCl, F-centre diffusion into crystals during additive colouring 0=20838
 KCl, F-centre diffusion rate, effect of deformation 1=8919
 KCl, F-centre diffusion, effect of dislocations 2=3964
 KCl, F-centre e.s.r. line contours 4=10330
 KCl, F-centre, electron-nuclear double spin reson. 2=6388
 KCl, F-centre formation by heating in K vapour, mechanism 1=11240
 KCl, F-centre formation by X-rays 1=8923
 KCl, F-centre growth kinetics 0=4301
 KCl, F-centre lifetime 2=6387
 KCl, F-centre photoconductivity, decrease on bleaching 0=13553
 KCl, F-centre prod. efficiencies at liq. He temp. 4=12810
 KCl, F-centre spin-lattice relax. 4=26421
 KCl, F-centre spin-lattice relax. times 1=20242
 KCl, F-centre and Tl^+ , absorption band shape 4=12809
 KCl, F-centres, aggregation, e.s.r. meas. 3=25302
 KCl, F-centres, assoc. absorbt. band 2=12600
 KCl, F-centres, bleaching and recovery by X-ray irradiation 1=3693

Potassium compounds—contd

- KCl, F-centres, configuration coord. model 2=23219
 KCl, F-centres, e.s.r. double-reson. meas. 4=22632
 KCl, F-centres, e.s.r. with h.f. modulation 3=15932
 KCl, F-centres, e.s.r. line width, temp. depend. 4=1527
 KCl, F-centres, e.s.r., saturation and partial recovery at 4°K 0=10236
 KCl, F-centres, electron-nucleus double resonances 0=6273
 KCl, F-centres, excited states 3=20244
 KCl, F-centres, formation, and optical bleaching, rel. to impurity effects 3=22841
 KCl, F-centres, by γ -ray irradi., lifetime 4=17450
 KCl, with F-centres, light exposure, electron microscope exam. 0=743
 KCl, F-centres, low temp. optical bleaching 1=8915
 KCl, F-centres, optical absorpt. and e.s.r. after bleaching 2=3963
 KCl, F'-centres, radiative tunnelling rel. to thermolum. 2=4194
 KCl, F' centres, radiative tunnelling rel. to thermoluminescence 1=20034
 KCl, F-centres, spin-lattice relaxation, calc. 1=20244
 KCl, F-centres, spin-lattice relaxation times, temp. dependence 4=4405
 KCl, F-centres, spin resonance, optical saturation at 2.1°K 1=14333
 KCl, F-centres and strain due to X-rays 3=6545
 KCl, F-centres, X-ray coloration and optical bleaching light intensity depend. 0=15861-2
 KCl, F colour-centres, thermoluminescence, bleaching, effect of impurities 3=20246
 KCl, F and F' centres, electronic-vibrational state interaction 3=22839
 KCl, F- and F' -centres rel. to photocond. 2=10535
 KCl, F and F' centre fluorescence concentration dependence 4=4303
 KCl, F-F' centres photoequilibrium, kinetic model 2=12470
 KCl, $F \rightleftharpoons F'$ reaction and F' lifetime 3=2840
 KCl, F- and K-colour centres, Na impurity, effect 4=30585
 KCl, F and M-centre equilibrium 3=8461
 KCl, F and M centres, photoconductivity and luminescence 0=20937
 KCl, F and M centres, radiation equilibrium model 4=17451
 KCl, F- and M-centres, X-ray coloured crysts. 2=21082
 KCl, F and M colour centres 4=1526
 KCl, F and M colour centres 1=19815
 KCl, F, M- and V-centres prod., plastic deform. effect 4=10002
 KCl, F, R and M-centres, prep., props., and models 3=2836
 KCl, F¹-type absorption bands 3=22840
 KCl, F'-type absorption bands rel. to complex colour centres 3=815
 KCl films, electron microscopy 4=2113
 KCl films, field-enhanced secondary electron emission 4=11702
 KCl films, secondary emission 0=3794
 KCl films, single-crystal, electron diffr. streak patterns 2=23939
 KCl films, transmission secondary electron emission, time dispersion, upper limit 4=14755
 KCl, flexural vibrs. of plates 2=13394
 KCl, foam layer in water, dark layer 2=17432
 KCl foil, secondary electron emission, energy distrib. 0=5342
 KCl, Fourier coeffs. and potentials, calc. 2=4417
 KCl, fundamental absorpt. tail rel. to temp. and Br content 2=8517
 KCl fundamental and Br²-induced absorption tail rel. to temp. 1=14582
 KCl, fused, refractive index rel. to temperature 3=11796
 KCl, fused, thermoelectric power 3=9477
 KCl, γ -irrad., colour centre formation, bleaching 2=10420
 KCl, γ -irrad., elec. cond. and breakdown 2=12572
 KCl, γ -irrad., thermolum. 2=12638
 KCl, growth rate and nucleation from soln. 3=5084
 KCl, Grüneisen const., Born's theory 3=25203
 KCl, Grüneisen γ , temp. depend. calc. 3=10607
 KCl, hard and neutron irradi., resistance to deformation and destruction 4=10352

Potassium compounds—contd

- KCl, hardening, by colour centres 3=22833
 KCl, hardening by quenching and irradi. of single crystals 3=16008
 KCl hardening, shear stress, F-centre depend. 0=3156
 KCl, Harshaw, gamma ray effects on optical props., var. in different samples 4=1525
 KCl, heat of soln. meas. 1=16165
 KCl, heavily γ -irrad., F- and M- band absorption 3=816
 KCl, high-press. X-ray diffr. study 2=8811
 KCl, hole F-centres, energy and χ -function 1=14334
 KCl, imperfections, direct obs. with electron micr. 3=2782
 KCl, imperfections, electron microscope obs. 3=17711
 KCl, imperfections, rel. to electron and X-irrad. 3=22708
 KCl with impurity valence changes, e.s.r. 3=1180
 KCl, In, Ga or Tl doped, thermoluminescence and exo-electron emission 4=13081
 KCl, interstitial ions and thermal cond. 2=21088
 KCl, interstitials, prod. by X-rays at low temp., mechanism 1=8922
 KCl, ion activated luminescence centres 0=16104
 KCl, ion mobility along [100] and [111], computer calc. 4=17438
 KCl, ionic cond. and dislocation density 2=3981
 KCl, ionic conductivity, 25-250°C, effect of plastic deformation 1=8929
 KCl, ionic melt, kinetic props., rel. to liq. A 2=15570
 KCl, isoelectronic alkali halides, u.v. reson. frequencies 2=8521
 KCl, K-absorpt. spectrum of Cl 3=6660
 KCl, K-centres, prod. and dichroism 2=18618
 KCl, kinetics of adsorbed layers on W 3=11323
 KCl, with KNO₃, cond., thermal, temp. var., phonon-defect reson. interaction 4=17382
 KCl, KNO₃ doped, thermal cond. and phonon reson. scatt. 2=20946
 KCl, lattice dispersion freq., from i.r. absorption at 82°K 0=13665
 KCl, lattice dynamics and sp. ht. 2=6250
 KCl, lattice thermal conductivity at low temps. 2=10341
 KCl, lattice vibration spectrum 1=14161
 KCl, lattice vibrations and specific heat, at low temp. 0=4261
 KCl, Li doped, A centres electron paramag. reson. 2=14470
 KCl, light scatt. by dislocation networks 0=11618
 KCl, light scatt., dislocation structure of centres 4=7150
 KCl, linear thermal expansion at low temps. 2=6285
 KCl, liquids state structure 0=19114
 KCl, luminescence 1=17909
 KCl, luminescence and colour centres 2=711
 KCl, luminescence excitation spectra 4=1786
 KCl, M-band oscillator strength, thermal stability of R, N and M-centres 1=999-1000
 KCl, M-band, temporary bleaching 4=20317
 KCl, M-centre diamagnetism, no e.s.r. 2=3966
 KCl, M-centre preferential bleaching with polarized light 0=20834
 KCl, M-centres, electron spin resonance 1=11241
 KCl, M-centres, electron trapping to give M' 2=18619
 KCl, M-centres, metastable triplet state e.s.r. 4=4408
 KCl, M-centres, optical absorption 1=17581
 KCl, M-centres, temporary bleaching effect 4=1530
 KCl; M, R, N, temporary bleaching 3=818
 KCl, magnetism of imperfection centres 2=6652
 KCl, microhardness, indentation and scratch, surface soln. depend. 1=4001
 KCl, molten, Na²² diffusion, rel. to temp. 4=8193
 KCl, motion of F-centres 3=6544
 KCl, N- centres 3=820
 KCl, Na²² and Na²⁴ diffusions 2=14468
 KCl, NaCl-doped, absorption band due to colloidal K-Na alloy 1=17585
 KCl, NaCl mix-crystals, F-bands 2=3965
 KCl, nuclear quadrupole relaxation 0=3142
 KCl, with O-containing additions, e.s.r. 2=21373
 KCl, "OH" absorpt. rel. to O₂ and water vapour 2=18834
 KCl, optical absorption and fluorescence of O₂-impurities 1=11363
 KCl, optical absorption and localized excitons 4=7097
 KCl, optical bleaching of γ -irradiated KCl 1=14338

Potassium compounds—contd

- KCl, optical excitation of I atoms, luminesc. 3=15709
 KCl, oxidation states of P^{32} after Cl^{35} (n, α) P^{32} 4=7777
 KCl, p-irrad., P^{32} diffusion and electrolytic migration 1=14314
 KCl, Pb impurity entry during growth, rel. to vibration 4=30821
 KCl, phase transformations, high-press., from compressibility, shock 3=18179
 KCl, phase transformations rel. to press 2=23803
 KCl, phosphorescence, green, symmetry, of heat pre-treated coloured crystals 0=13720
 KCl, photo creation and destruction of F centres 0=15859
 KCl, photocond. in fundamental absorpt. range 2=8427
 KCl, photocond. of γ -irrad. monocrystals 2=4066
 KCl, photoconductivity of additively coloured crystals at $> 10^\circ K$ 1=5027
 KCl, photocurrent due to strong elec. field 1=19897
 KCl, photocurrent due to strong elec. field 2=8433
 KCl, photoelec. emission in extreme u.v. 4=3032
 KCl, photoelec. Hall effect in additively coloured crystals, 4-114°K 1=5028
 KCl, photoelectric emission, by X-rays, 0.28-9 keV, on films, effective depth 3=21864
 KCl, plastically deformed, thermal glow luminescence 3=565
 KCl, point defect aggregation 3=22731
 KCl, point defects from electron irrad. 3=12967
 KCl, polaron energy spectru. 0=15836
 KCl, polyactivated, luminesc. 2=23601
 KCl, polymorphic transition press. calc. 2=14922
 KCl, preferential orientation on prod. from K_2PtCl_6 and K_2PtCl_4 0=11992
 KCl, pure crystals, preparation 1=12622
 KCl, purification by zone refining method 1=15001
 KCl, quench-hardening 3=11172
 KCl, R centre, by X-irrad., e.s.r. 4=17452
 KCl, radiation-induced precipitation sites 0=17978
 KCl, refl. coeff. rel. to refr. index and absorpt. coeff., 23.6-113 Å 4=22846
 KCl, reflectance curve 0=14821
 KCl, reflectivity, restrahlen bands 2=2218
 KCl, repulsive energy, calc. 2=2039
 KCl, reversible plastic-flow stress changes on illumination 4=13392
 KCl, scattering of light, rel. to defects in single crystals 3=920
 KCl, screw-dislocations, etch pits obs. 2=2084
 KCl, secondary electron emission 2=7652
 KCl, secondary electron emission 0=12628
 KCl, secondary electron emission, film thickness depend. 1=13123
 KCl, secondary electron emission region, thickness and efficiency 3=19323
 KCl, secondary electron energy spectrum fine structure 0=10941
 KCl, shape of F-band absorption 0=6180
 KCl, single cryst. laminae, growth and struct. 2=10795
 KCl single cryst. thin layers, elec. cond. 2=6428, 8304
 KCl, single crystal filament and point production 0=18315
 KCl, single crystal, propagation of discharge 1=5427
 KCl, single crystals elec. cond. 4=30603
 KCl, single crystals, u.v.-irradiated, electron microscope study 0=18424
 KCl soln., electrolysis, induced e.m.f. 0=12107
 KCl, soln. in $HCN-H_2O$, cond. 2=19553
 KCl, soln. in water, thermodynamic props. 4=21126
 KCl solution, Co hydrogen over-potential 4=29228
 KCl, spectrum and ionic cond., OH^- effects 3=18005
 KCl, sputtering, low-energy, K atom ang. distrib. 3=4215
 KCl, with Sr impurity, dielectric losses 1=1128
 KCl, use as standard for thermal cond. meas. 2=22077
 KCl, use as standard for thermal cond. meas. 3=5548
 KCl, strain-hardening, slip effect 4=23105
 KCl, surface defects, high temp. processes 3=20214
 KCl, surface diffusion of K and Cl 1=17562
 KCl, surface energy of {100} planes 3=25178
 KCl, surface features, Czochralski growth method 3=11218
 KCl, surface ioniz. on W and Ta 3=5632
 KCl, thermal bleaching of F-centres 1=14337
 KCl, thermal cond. and acoustic relax. 2=2059
 KCl, thermal exp. 4=17374

Potassium compounds—contd

- KCl, thermal expansion 0=15815
 KCl, thermal expansion (26-77°C) 2=14387
 KCl, thermal expansion 2=16610
 KCl, thermal expansion, low temp., X-ray method 4=28378
 KCl, thermal expansion meas., analysis 4=20222
 KCl, thermal expansion rel. to proton-irrad. 4=6752
 KCl, thermal glow luminescence, rel. to plastic deformation 3=23104
 KCl, thermal resistance, fall nr. Debye temp. 3=17670
 KCl, thermoelasticity rel. to polycryst. state 2=12841
 KCl, thermoelec. power 2=8455

inorganic, luminesc. in elec. fields 2=14737
insulators, made of pressed powders, thermal cond. 3=25217
magnetic, perm. magnet use, stability 0=3038
magnetic, in plastic as perm. magnets 0=3037
magnetic, shap distribution 0=3048
magnetic susceptibility meas. apparatus, balance and crvostat 4=21612
on magnetic tapes, interaction, in ambient fields 0=1792
magnetism, measurement by electron beam deflection 1=10755
magnetization processes in ferromag. powders 1=6311
magnetized, electron beam diffraction 0=10968
mechanics of loose media, soln. of eqn. 2=15445
metal, artificial dielects., microwave props. 2=6513
metal, filing machine 4=23539
metal, production by spark erosion in liq. Ar 4=30999
metal, X-ray line broadening 1=7889
microcrystalline, photoconductivity mechanism 1=3784

Powders—contd

milk, electrification, charge amount rel. to conc. in flow and flow vel. 4=8599
 mineral particles, friction 0=8135
 n.m.r., line broadening by field inhomogeneities 3=5048
 nuclear emulsion powder grain interactions
 non-visibility theory 1=16636
 optical absorption and diffuse reflectance 4=13005
 optical absorption meas. on crystal powders 1=4452
 optical constants, theory 3=10901
 optical reflection, comparison of theories 4=21277
 optical reflection, diffuse, Mg oxides and ultra-marine 0=12469
 optical transmission, effect of adsorbed water, theory 0=3650
 organic, mixed with naphthalene, Raman spectra 4=26170
 organic, photo- and radioluminescence, duration 3=15716
 organic semicond., elec. cond. cell for cond.: temp. meas. 4=28577
 pulverized materials, elasticity, anisotropy 2=12840
 paramagnetic, analysis by mag. separator 3=9903
 paramagnetic resonance line shapes 0=21219
 particle size analysis 4=20786
 particle-size classifier, diameters < 50 μ 4=4999
 particle size distrib. 4=23537
 particle size, distrib. 1-40 μ , using photosedimentograph 3=16570
 phosphors, quantum efficiency, wavelength depend. 0=2954
 phthalic acid, reflection spectra, rel. to absorbed layer 3=23062
 pigments, mixture data 0=14857
 plasticity, theory 1=3977
 polymers, bulk modulus by "suspension method" 1=12578
 porosity, contact cross-section and Young's modulus reln. 4=23542
 powdered substrates, surface area of preadsorbed water 4=23548
 quartz, colour centres, e. s. r. meas. 4=6883
 quartz, existence of "flow layer" on particles 1=6557
 quartz, ground respirable size, distributed layer 3=16128
 quartz, ground and shattered, X-ray diffrn. 3=3352
 quartz, ground, 3 μ dia., disturbed layer thickness 4=13660
 quartz sand, flow-stick transition 4=23538
 radioactive, measurement of speed of pneumatic transport 0=19041
 radioactive, surface area meas. 1=20645
 Raman intensities, absorption effects 0=13687
 refractory compounds, emissivities 0=16919
 ruby, electrolum. mechanism 2=4191
 rutile, adsorption rel. to surface polarity 2=2433
 rutile, electrification 0=13643
 semiconductors, powdered, photoconductivity using photodielectric effect 0=20924
 separation by micro-dispenser 1=21164
 shock excitation, thermal, spectroscopy 3=24018
 size-number distribution, size parameter calc. method from microscopic obs. 4=26703
 subsidence trough, random walk model 4=16068
 surface area meas., automatic, using Ar adsorption 4=7697
 surface meas., specific, by mol. gas flow 4=7696
 thermal cond. meas. appar. at high temps. 3=21584
 thermal cond. meas. in vacuum, appar. 4=2865
 volume and grain boundary diffusion 1=7588
 X-ray absorption, meas. appar. 3=12281
 X-ray crystallography, camera, Debye-Scherrer 3=6943
 X-ray diffracted intensity, effects of granularity 4=23385
 X-ray meas. of grain size 1=2551
 X-ray quantitative diffractometric analysis 4=29080
 X-ray scatt., diffuse, meas. 3=11251
 Ag selenide, thermoelectric figure of merit 4=7088
 Al, ground, recryst., X-ray meas. 4=10575
 Al, heat of wetting, by hydrocarbons, in solution 3=16131
 Bi¹⁰, n-irradiation, sintering 1=14351
 B-Ti dispersions, metallurgical characteristics 0=14057
 Ba ferrite powders, effect of particle size on coercive force 3=15879
 Ba ferrite sat. magnetization rel. to grinding and annealing 4=26334
 Ba ferrite, single-domain magnetic props. 3=15880
 BaCl₂, dielectric const., density var., 9200 Mc/s 4=22758
 C, Hall effect measurement 0=17990
 Ca halophosphate phosphors, optical props. 1=6200

Powders—contd

Co, deformed, elastic anisotropy and lattice strain 3=1231
 Co, n.m.r. of nuclei in Bloch walls 3=3193
 Co, n.m.r. for various phases 1=6434
 Co, Co⁵⁹ n.m.r., additional lines 1=1280
 Cr₂O₃, antiferromagnetic properties 3=8697
 Cu, C-reduced, density, flow rate 3=13552
 Cu, cold pressing rel. to sintering and recrystn. 2=6785
 Cu, ground, recryst., X-ray meas. 4=10575
 Cu, sintering, thermodynamics and mechanism 2=23898
 Cu-Ni compacts, X-ray diffraction study of interdiffusion 1=11225
 Cu-Ni, interdiffusion, X-ray diffr. study 3=2823
 Cu-Ni, powder to alloy homogenization X-ray diffrn. obs. 4=26550
 Fe, carbonyl, mag. permeab., hysteresis loss factors 3=11089
 Fe, Fe⁵⁷ n.m.r. rel. to internal strain 2=2307
 Fe, n.m.r., effect of external mag. field 3=1203
 Fe, Ni, Al, adsorption isotherms of H⁺ and OH⁻ aqueous ions 4=4674
 Fe, sintering rel. to grain boundary sliding 3=11293
 α -Fe₂O₃, antiferromagnetic properties 3=8697
 γ -Fe₂O₃, micropowders, ferrimag. resonance 3=1175
 Ge films, elec. cond., sign 1=14452
 Ge, n-type, adsorption of water 3=6890
 Ge, O₂ chemisorption 0=10368
 HgO, pressed, dielec. permittivity and loss 2=4086
 KCl, elec. charge, from β -irrad. crystals 3=902
 KCl, electrification by β -irrad., effect of F-centre conc. 2=8255
 KIO₃, spectrochemical analysis, by spectrum, diffuse reflectance, u.v. 3=23557
 KCl-KBr crystallites, compressed to 3 ton cm⁻² 2=12897
 K₂HgI₄, K₂HgI₆.H₂O, spectra, diffuse reflectance, u.v. and mol. configuration 3=23557
 MgO, reflective power rel. to temp. 2=6540
 MgO, specific heat rel. to particle size, theory 2=15080
 MnBi alloy, residual mag. induction, temp, instability 4=7266
 Mn-Bi alloys, ferromag. props., temp. depend. 1=3903
 Mn-Bi, magnetic properties 1=7750
 MnZn ferrite, parameters rel. to grain growth 4=20782
 MoSi₂, "pest" degradation 4=29169
 NaCl, specific heat rel. to particle size, theory 2=15080
 Nd-Mg double nitrate, reflection spectrum 3=23063
 Ni, ground, recryst., X-ray meas. 4=10575
 NiAl, "pest" degradation 4=29169
 NiO, antiferromagnetic properties 3=8697
 NiO, pure and Cr³⁺ doped, freq. depend. of elec. cond. 4=30625
 S, dielectric const., density var., 9200 Mc/s 4=22758
 Sn, compacted, density rel. to pressure 3=6875
 Sr ferrite, single-domain magnetic props. 3=15880
 TiB₂, "pest" degradation 4=29169
 UC, Xe diffusion 3=2834
 ZnFe₂O₄, sintering 2=4479
 ZnO, adsorption process, effect of γ -rays 2=12949
 ZnO, effect of adsorbed CO₂ on i.r. spectrum 2=6582
 ZnO, pure and doped, X-irradiated, electron emission 0=2375
 ZnS, effect of cryst. size on luminesc. 2=718
 ZnS, electroluminescence, microscopic exam. 3=11012
 ZnS phosphors, particle growth 1=1380
 ZnS phosphors, pulverization, effect on opt. and elec. props. 0=10084
 ZnS, structure, effect of ball milling 4=26253
 ZnS-CuCo, electret effects 2=6530, 8472
 ZnS:Cu:Mn, electroluminescence and electrical conductivity 1=10123

Praseodymium
 allotropy at high press. 4=26560
 antiferromagnetism 4=26354
 antiferromagnetism by s-f-exchange model 2=4214
 atom, third spectrum, energy level analysis 3=15291
 atoms, Pr III, 4f³ and 4f²5d configurations 4=17250
 compression behaviour 4=17767
 elec. cond., 1.3-300°K 1=5003
 elec. conductivity, effect of very high press. 2=619
 electronic transitions in CdF₂ 0=13698
 ion, time-resolved spectra, meas. in spark 2=14204
 ionization potential 0=14965

Praseodymium—contd

- ions, Pr^{3+} in crystals, mag. and spectrosc. investig. 2=21295
 ions, Pr^{3+} in LaBr_3 , absorpt. and fluoresc. spectra 2=10595
 ions, Pr^{3+} , quadrupole antishielding factor calc. 4=3791
 ions, in solids, h.f.s. 1=19979
 luminescence in thoria 2=14733
 mag. props. 2=8606
 magnetic props., calc. 0=11807
 magnetic props., simple model 4=7222
 paramagnetic susceptibility 1=10129
 resistance, elec., 4-lead meas. system 4=30612
 specific heat, at 0.5-4°K 2=2051
 specific heat, 0.4-4°K, nuc. and mag. analysis 4=9853
 spectra of Pr^{3+} , calc. 0=5886
 spectrum, visible, rel. to 4f shell transitions 3=13182
 spectrum and Zeeman effect, in ethylsulphate:Ce 1=1164
 trivalent, laser action in CaWO_4 2=18815
 $\text{Pr IV} 4f^2$ ions, orbit-orbit interactions 4=15262
 Pr in molten Pr tribromide, elec. conductivity 4=8220
 Pr I and Pr II, hyperfine structure 1=12253
 Pr oxides, structure, related props. 2=4418
 Pr(III) aqua ions absorption bands, with sulphate ligands 4=2685
 Pr^{3+} , absorption and fluorescence spectra in LaBr_3 3=3014
 Pr^{3+} , approx. excited eigenfunctions 3=2572
 Pr^{3+} , i.r. absorption spectra in soln. 3=9462
 Pr^{3+} ion, configuration interaction 3=10960
 Pr^{3+} , self-consistent fields, without exchange 0=5848
 Pr^{3+} , spectra in ethylsulphate crystals 3=10959
 Pr_2C_3 , structure 2=4420
 PrCl_3 , low temp. luminesc., ion-pair reson. theory 2=6603
 PrCo_5 , ferromag. coupling and thermomagnetic props. 2=10640
 Pr^{3+} in LaCl_3 , vibronic selection rules at special points of Brillouin zone 4=12615
 $\text{Pr}(\text{NO}_3)_3 \cdot 6\text{H}_2\text{O}$, absorption line shift with film thickness 0=2942

Praseodymium compounds

- ferrite, ortho, effect of substituting Al^{3+} for Fe^{3+} , from mag. meas. 3=8683
 oxides, dipole relaxation, rel. to crystal structure 3=8552
 Pr chloride, electron transitions in far i.r. 4=1419
 Pr ethyl sulphate, magnetic props. and crystal field 4=13120
 Pr ethylsulphate, specific heat, rel. to spin-lattice coupling 4=6739
 Pr ethylsulphate, vibr. energy levels and spec. heat 4=1364
 Pr nitrite, bridge structure between Pr and NO_2 groups, from i.r. spectra 1=1163
 Pr orthoferrites, effect of Al substitution on mag. props. 1=1235
 Pr-substituted YFe garnet, Curie temp. 1=14749
 PrAl_2 , mag. moment and Curie pt. 3=991
 PrAl_2 , n.m.r. of Al^{27} , mag. shift parameters meas. 4=7339
 PrBr_3 , crystal elec. field, effects on Pr^{3+} 3=10569
 PrB_6 , formation, structure 0=14020
 Pr_2C_3 , neutron diffract. and paramag. scatt. analyses 3=1328
 PrCl_3 , anhydrous, mag. suscept. meas. 4=7217
 PrCl_3 , crystal elec. field, effects on Pr^{3+} 3=10569
 PrCl_3 , crystal-field shielding 3=17629
 PrCl_3 , electronic Raman effect 3=15694
 PrCl_3 , electronic and vibrational Raman spectra 4=9746
 PrCl_3 , electron states, comparison with NdCl_3 0=8015
 PrCl_3 i.r. quantum counter 1=6978
 PrCl_3 , 100 and 325 μ absorption bands 4=26214
 PrCl_3 , spectra of Pr^{3+} , crystalline field interaction 1=19973
 PrCl_3 , spectrum below 25 000 cm^{-1} , analysis rel. to crystal field theory 4=25809
 PrCl_3 , spectrum, ion-pair absorption lines, 22220-28100 cm^{-1} 3=23075
 PrCl_3 (Nd^{3+}), unusual i.r. fluorescence 4=4304
 PrF_3 , growth of highly-perfect single crystals for masers 3=23397
 Pr-Gd, specific heat, 1.3° to 4°K 4=6748
 PrH_x ($x = 2.02-2.71$), mag. props., variation with temp 3=15744
 PrI_3 , molten, elec. cond. of Pr 3=21404
 $\text{Pr}(\text{NO}_3)_3 \cdot 5\text{H}_2\text{O}$, crystal structure, atomic 3=18326

Praseodymium compounds—contd

- PrO_2 , mag. suscept. rel. to crystal fields 4=13121
 PrO_x , sorption of O, irregular press. var. 4=23601
 Pr_2O_3 , mag. suscept. rel. to crystal fields 4=13121
 Pr_2O_3 , vaporization 1=8263
 $\text{Pr}_2\text{O}_3 \cdot \text{Fe}_2\text{O}_3$, mag. hysteresis, effect of temp. 0=13834
 $\text{PrO}_{1.72}$ and $\text{PrO}_{1.33}$, mag. suscept. rel. to crystal fields 4=13121
 PrS , 800°-1500° C meas. 4=14744
 PrS , thermal expansion, X-ray determ. 4=30523
 PrS , Pr_2S_3 , thermal exp., 20-1020° C, Debye temp. 4=22508
 Pr_2S_3 , 800°-1500° C meas. 4=14744

Precipitation

 titanium carbide, 'Mondrian' precipitation patterns 1=7842
 Vicalloy, cold-rolled and heat-treated, microstructure 3=20895
 water vapour, form. of droplets or ice crystals 2=1313
 wüstite, Fe-saturated, pptn. of metastable phase 4=2078
 in Zircaloy 2 during hot working 2=4460
 Ag, impurity from Ge, kinetics 2=19099
 AgBr, ageing by precip., theory 2=8934
 AgCl in NaNO_3 - KNO_3 eutectic mixture, heat of precipitation at 320°C 4=16282
 Ag-Zn solid solution, vacancy precipitation kinetics 0=18387
 Al alloys, dispersion, effect of fatigue deformation 1=15150
 Al alloys, quenched, ageing 2=10915
 Al, hardening, effect on supercond. 2=2956
 Al-Ag alloys, nucleation sites 1=12650
 Al-Ag alloys, quenched from 550°C and aged 3=25803
 in Al-Ag(25%), electron microscope study 3=16110
 Al-20% Ag, heterogeneous 3=18356
 Al-20% Ag with or without trace elements, effect of plastic deformation, and aging characteristics 4=23250
 Al_2Cu , from 4% Al-Cu alloy, X-ray primary extinction study 1=15147
 Al-Cu alloy, clustering, deform. effect 3=18182
 Al+1.7% Cu alloy, precipitate hardening 1=20602
 Al-Cu alloy, θ' , interact. with dislocations 3=12977
 Al-Cu alloys, clustering kinetics 2=15065
 Al-Cu alloys, effects of quenching 0=21239
 Al-Cu alloys, recrystallization, effect of dispersed second phase 3=25757
 Al+4% Cu foils 1=20601
 Al-(1.6 wt.%)Cu interaction with dislocations 3=20894
 Al-Cu, pre-pptn. phenomena 3=8876
 Al-4% Cu with or without trace elements, effect of plastic deformation, and aging characteristics 4=23250
 Al-Li alloys during creep, strain-induced 2=4469
 Al-Mg alloys, effect of vacancies 4=15729
 Al-Mg alloys, quench-aged 4=17750
 Al-1.2% Mn alloy 4=7473
 Al-Si alloy, effect on mech. props. 3=13538
 Al-Si alloys containing Mg 3=18355
 Al-Zn alloy, ageing, natural, effect of a third component 4=17752
 Al-10% Zn alloy pre-precipitation, resistometric study 1=1426
 Al-Zn alloy, precipitation, effect of Mg 3=20167
 Al-Zn alloys, ageing, n.m.r. study 3=11295
 Al-Zn alloys, rel. to dislocation loops, cold working effects 4=13473
 Al-Zn alloys, G.P. zone formation, elec. resist. and X-ray study 1=20600
 Al-10%Zn, pre-pptn. rate, plastic deform. effect 3=20896
 Al-30% Zn, spherical pre-pptn. zones 3=8911
 Al-Zn (10 wt. %), clustering, little effect of Cu, Ag 4=17753
 Al-Zn-Mn alloy, ageing sequence, 100°C 3=13542
 Al-Zn-Mg alloy, sub-microscopic 2=12933
 Al-Zn-Mg, clustering, effect of Mg 4=17754
 Al-Zn-Mg, stress-corrosion life 2=16968
 Au-Co alloys, decoration of dislocations 1=12384
 Au-Co alloy, rel. to mag. props. 0=21242
 in Au-Ni alloy crystals 1=6542
 Au-Ni alloy, ferromag. precipitate obs. 3=5138
 Au-Pt alloys 1=1428-9
 B, at Si-SiO₂ interface, coefficient, two-boundary solutions 4=30578
 Ba, in KCl/Ba chloride crystals 0=11627
 Ba chromate, by chemical exchange, crystal habit variations 1=14978
 C in α -iron 0=18405

Precipitation—contd

C in α -Fe, rel. to kinetics in alloys 4=23246
 C, out of extra-soft steels 3=16111
 C in irradiated Fe 2=15070
 C in Fe-C alloys, kinetics study 3=6867
 C in Fe-C, rel. to radiation-produced defects 3=22866
 Ca, coprecipitation with U and Th oxalates 3=1275
 in CdS single crystals, impurities 4=13479
 CdS from solns. structure variations 0=8207
 CdSe, of Cu, Ag, Au, Ni impurities 4=29004
 Co, in Cu-Co alloys, particle size, rel. to magnetization 0=3016
 Co impurity from Ge, kinetics 2=19099
 Co-Au alloy 1=20603
 CoCl_2 in NaCl, Mössbauer effect study 3=22630
 Co-Ni-Nb alloys, discontinuous 3=20724
 Cr-N alloys, dilute 3=6865
 Cr spinelides, Cr_2O_3 precip. rel. to calcination 3=16081
 Cr-Ni alloys, impurity carbide precip. 2=15069
 Cr-Ni system, equil. diagram 3=11289
 Cu alloys, discontinuous and continuous 4=20701
 Cu, stress prod. from cell interface migration 4=26549
 Cu-4% Ag alloy, Hg-embrittled, effect on fracture path 4=30774
 Cu-Al alloys, segregation of Al 1=20598
 Cu-3.1 wt% Co alloy, age hardening sequence, electron microscope study 4=30776
 Cu-Co alloy, coherency strains around precipitates 3=1222
 Cu-3%Co alloy, hardening 3=20898
 Cu-(2 wt.%)Co interaction with dislocations 3=20894
 Cu-Co, particle dissolution by neutrons 2=16647
 Cu-Fe rel. to Mössbauer effect 3=22698
 Cu from Ge, super-saturated soln., along As-grown dislocn., meas. 4=29007
 Cu in Ge, var. crystal dislocation density, 450-570°C 4=13480
 Cu-In, during age hardening 4=4461
 Cu_2MnAl - Cu_3Al Hensler alloys, and superparamag. 4=20541
 Cu, in Si 1=4987
 Cu in Si 1=10274
 Cu_3Ti in Cu-Ti alloys 0=21228
 Fe, in β -brass-iron 0=2993
 Fe, rel. to creep, 550°-700°C 3=18189
 α -Fe, effect of irradiation 1=12652
 Fe, in grain boundaries, impurity separation 0=17970
 Fe impurity from Ge, kinetics 2=19099
 α -Fe, precip. of Cu and Au 2=15063
 Fe-Al crystals, rel. to coercivity, remanence 2=14770
 Fe-C alloys, α -tempered, carbide pptn. 3=13539
 Fe-C alloys, quench-aged, structure 3=20903
 Fe-C, irradi., C precipitation, kinetics 4=15735-6
 Fe-C-Mo alloy, carbide precipitation during tempering 4=17761
 Fe-C-N, aged 4=1503
 Fe-0.03%C, rel. to Nb addition 3=20899
 Fe-Cu-Ni alloys, effect on mag. props. 1=6338
 Fe-Cu solid solns., kinetics studied 4=22988
 Fe, in Ge, segregation coeff. 1=11583
 $(\text{Fe}, \text{Mn})_3\text{C}$, (cementite), precipitation from austenite 4=15734
 Fe-Mo alloy, discontinuous, two types 4=13492
 Fe-4%Mo-0.2%C, Mo_2C precip. on dislocations on tempering at 500-700°C 4=17762
 Fe-N alloys, quench-aged, structure 3=20903
 Fe-Ni-C martensite, carbide precipitation on tempering 4=15738
 Fe_3N and Fe_4N , precipitation from ferrite 4=15734
 FeO, pre, electron mic. obs. 4=26558
 FeO, pre, X-ray obs. 4=26557
 Fe-3% Si, grain growth obs. 3=18360
 Fe-Zn alloy, discontinuous, two types 4=13492
 Ga, at Si-SiO₂ interface, coefficient, two-boundary solutions 4=30578
 GaAs, at crystal dislocations, of Li 4=22587
 GaAs, effects of Cu precipitation 0=18039
 GaCl_3 impurity in CdS 4=15473
 Ge, rel. to defect study 3=22703
 Ge, rel. to Hall effect carrier concentration discrepancy 3=17861
 Ge, kinetics 4=12738
 Ge-Cu solid solution, rel. to distortions 4=2084
 Ge-Ni solid solution, rel. to distortions 4=2084

Precipitation—contd

- He atoms in copper, effect of neutron irradiat. 1=6544
 In_2Te_3 , microscopic and sub-microscopic, obs. 2=10917
 KCl, excess K, mechanism 2=19171
 KCl radiation-induced precipitation sites 0=17978
 Li, in Ge 0=12078
 Li in irradiated in LiH 2=21000
 Li in Ge, electric-field-enhanced 4=10425
 Li in LiF by neutron irradiation 1=19820
 in Mg oxide, impurity ppts. 3=20169
 Mg_2Si in Al—(7%)Mg—(0.015%)Si 3=10666
 Mg—Zn alloys, ageing characts. 2=21554
 Mg—Zn(6%), X-ray exam. 4=17765
 MnCl_2 , in NaCl, effect on thermal cond. 1=14190
 Mo_2C in Cr—Mo steel 0=18389
 Mo—Re alloys, δ -phase 4=29013
 from NaCl— CaCl_2 solid soln. 3=20840
 Ni, impurity from Ge, kinetics 2=19099
 Ni from supersat. soln. in Si 4=4173
 Ni—Al alloys, rel. to dislocation pairs 4=12765
 Ni—Al bronze, β — α reaction, non-equil. segregation 3=18352
 Ni—Cr alloys, Cr carbide precipitates on dislocations 1=15146
 Ni—Cr alloys, on dislocations 1=20606
 Ni—Cr base alloys at grain boundaries 4=2111
 Ni—Cr—Ti alloy 4=7504
 Ni in Si 3=6537
 Ni from Si, heat treatment effect, meas. 4=28453
 Ni—10.1 at. % Ti, rel. to ferromagnetic Curie temp. 3=25755
 O, in Si, effect on plastic deform. 2=16956
 Pb alloys, ageing mechanism 1=15151
 Pb, in PbI_2 decomposed by electron bomb. 1=17589
 PbS films with platelet precipitates on surface, effect on film structure 4=7624
 Pb—Sn and Pb—Cd, effects on superconductivity 3=24145
 Sb in Si 3=18361
 Si from Al 0=16350
 Si crystals containing Al 0=20826
 Si iron, plastic microstrain 2=6724
 Si, Al-doped, rel. to internal friction 1=1303-4
 Si, Cu precip. at surface dislocations 4=7705
 Si, kinetics 4=12738
 Si single crystals, identification of precipitate particles by reflection electron diffraction 1=4087
 Si single crystals, O-doped, X-ray study 4=23287
 Sn, in Ge, segregation coeff. 1=11583
 Ti—Al—Co alloys, effects on mech. props. 3=18204
 γ -U base solid solns., decomp. 2=21555
 U—Mo alloy, γ -quenched, annealing 3=5135
 U—Mo, finely dispersed phases 2=4443
 UO_2 , over-sintered, grain-boundary precipitates in 4=7680
 U_4O_9 in UO_2 , habit planes 0=8150
 U from UO_2 crystals 3=13591
 W—Re alloy, σ -phase particle obs. 3=18340
 ZnO, aerosols, by l.f. spiral acoustic field 3=18462
 ZnTe, Te pptn. 3=16049
 Zr oxide on thin Zr films 4=4696
 Zr—H system 3=20905
 ZrH_2 in Mg—1/2 wt. % Zr alloy, rel. to corrosion attack and creep 3=16116
 ZrH_4 in Zr, electron micr. study 3=11294
 ZrO_2 , on grown-in dislocations in MgO 3=10673
 Zr as Zr hydride in Mg—Zr alloy, rel. to creep strength 4=28965

Pressure

- See also Atmospheric pressure and density; High-pressure phenomena and effects; Radiation pressure; Vapour pressure.
 on aerofoil, distribution at transonic speeds, theory 1=12910
 automatic recording film balance system 0=2162
 capillary, in porous media 1=15823
 disturbances, transmission in long small-bore tubing 2=17492
 dynamic, meas. with resist. transducer to 300 kbar 4=21225
 effect on crystal structure and phase transitions, apparatus for X-ray diffraction obs. 4=10519
 effect on parameters of a.c. discharges 4=8634
 gas film, "wedge pressure" 3=1723
 gas target, meas. and regulation 4=14192
 gases, regulator 4=16132

Pressure—contd

- gauge with 0.1 μsec rise time for shock reflection obs. 4=16006
 high pressure thermodynamic scale 0=16930
 hydrostatic, rel. to Si elastic moduli, 25.0° and -195.8°C 4=23202
 internal, as basis of solutions theory 1=15861
 internal, in solids, at 0°K, quantum-mech. calc. 0=11551
 lightning stroke near peak temp. 4=23765
 liquids, internal, rel. to u.s. velocity 3=21358
 low temp. regulator, diaphragm 4=18505
 measurement, with capacitor microphone, at low pressures 1=12949-50
 moving fluid, deviation from hydrostatic value 2=4987
 planetary nebulae, gas and radiation pressure 0=10518
 pressure—entropy diagram, complement to Mollier diagram 4=8532
 pure liqs., internal press. var. 2=4981
 shells, instability, local, bulging 3=5394
 sinusoidal, generator 0=3586
 in TNT explosion products 0=14728
 transfer through porous medium, distribution equations 0=10686
 transient, on elastic half-space boundary, disturbance 2=15681
 transonic pressure fluctuations 3=23923
 pulse propag. in liquid column 4=21078
 stabilizer for region of 1 torr 4=4995
 units, in vacuum physics 1=5298
 unit in vacuum physics ("vac"), criticism and defence 1=8425
 vars., reson., and 10-25kV X-rays, pot. prod. on Ar 3=7449
 on vibrating piston, in infinite baffle 4=29686
 on water, effect on structure and sound velocity 0=10657
 water, forced circulation, press. drop prediction 4=24449
 H pressure regulator 4=14232
 He⁴, liquid, near λ point, ($\partial p/\partial T$) 3=12018
- Pressure measurement**
 See also Manometers; Vacuum gauges; Vapour pressure measurement.
 air, at various temps., with radiosonde 4=7832
 alkali metals, molten, two-bellows gauge 4=8147
 atmosphere, by ionization gauge 4=30927
 bakeable gauge, absolute, mm Hg range 2=7170
 blast pressure gauges with ferroelectric ceramic elements 4=21009
 calibrator, hand-held, for measuring systems 0=8757
 convection manometer 0.5 to 1000 mm Hg 0=3549
 diaphragm displacement, strain gauge obs. 4=29508
 diaphragm-type transducer for gases, use as controller 1=4300
 differential pres. gauge, high sensitivity 2=19503
 differential press. gauge, simple and sensitive 4=2514
 dynamic blast, by Pitot static gauge 4=2517
 dynamic pressure differential of 0.1 μHg , gauge 3=1736
 in elec. discharges, 300 - 500 kA, with piezoelec. gauge 1=7043
 from elec. resistance values, conversion scales 3=23830
 electroluminescent gauge, 0-800 mm Hg 2=19507
 by electrolyte conductance, 1000-3000 atm. 2=19500
 errors in vicinity of gas discharge 3=12092
 fluctuations meas., probe—microphone system 3=1782
 gauge, dead-weight type, with air loading device for var. pressures 4=24008
 in glass systems, boro-silicate, by strain gauge, external, 0-2 atm. 3=21290
 greaseless Hg cutoff for differential pressure operation 0=3551
 high pr. by Pt—Bi thermocouple 1=18753
 high press. studies above 50 000 kg/cm², use of reference points in press. scale 4=8015
 high pressure vessel, to 1000 atm., incorporating Teflon gasket 1=18344
 high, by use of volume discontinuities, corrections 3=9404
 high, by wire transducer 4=18022
 hydrophone calibration in vibrating liq. 2=17575
 hydrostatic press. transducer, tunnel diode 2=6484
 intracardiac catheter tip piezoresistive pressure gauge 0=16501
 intracardiac transducers 1=9210
 ionization gauge use for 10⁻³ - 1 torr 2=17520

Pressure measurement—contd

- light-pressure tube 1=12959
 low, bibliography 2=2791
 low-pressure indicator, effect of connecting passage 3=16571
 low temps. 4=11435
 low transient press., by surface tension gauges 3=7169
 McLeod gauge, 10^{-2} -1250 torr 3=18775
 manganin h.p. gauge with multiple integral calibrants 4=24009
 manometer, high press. long distance indication 2=2673
 membrane type zero instrument, high press. and temp. 2=19499
 Mercury reservoir for barometer demonstration. 3=151
 molten alkali metals, pressure gauge 4=8892
 null-balance sensitive pressure transducer 4=2516
 oceanographic, dielectric 4=13775
 oxygen partial pressure, 1 to 10^{-6} atm. 1=9361
 pickup for recording explosive disturbances, resiliently isolated 1=12841
 piezo-cell press. pulse transducer 2=19502
 piezoelectric gauges for rapidly varying press. up to 7 kbar 4=8014
 piezoelectric probe for plasma press. transients 1=4615
 piezoelectric transducer, for rapid variations 2=2672
 piezoresistive effect in resin-bonded C, use of 3=21288
 piston gauge, corrections, temp., press., gravity 3=21289
 piston gauge, to 3000 atm 3=1652
 piston gauge, to 25 ton/cm² 2=19505
 piston manometer for 20 000 atm 0=3548
 in presence of condensable vapours, use of "air-bleed" with vacuum gauge 1=5308
 pressure balance detector, diaphragm-type 2=19501
 pressure recording systems, hydraulic oscillator calibration 0=3587
 recording Bourdon gauge manometer 2=4975
 semiconductors, review 4=12895
 in shock tubes, piezoelec. bar gauge 4=29703
 shock-waves, BaTiO₃ gauges, design and characteristics 0=16665
 shock-wave meas., BaTiO₃ spherical shell transducer 0=130
 soil-pressure cell 0=8590
 solid-solid transitions, by piston gauge 2=10778
 sound, photographic method 0=16793
 spoon gauge, optical servo control 1=8091
 spoon gauge, sensitive 0=16664
 spoon gauges, coupled 0=3550
 $<10^{-10}$ torr, by Bayard-Alpert and magnetron gauges 3=23951
 in tetrahedral anvil device, pres. distrib., hysteresis meas. 3=7168
 thermistor hypsometer with high accuracy 0=914
 thermistor pressure gauge design 1=10471
 total and static, props. of cylindrical probes 4=5133
 transducer for high-pressure pulses, of sulphur 4=2515
 transducer, 10^{-6} -200 mm Hg range 2=19506
 u.s., by light diffraction 0=10782
 ultra-high vacuum, rel. to outgassing and directional pressure 2=9324
 use of variable retardation plate 3=21571
 vibrating-wire cells, for earth pressure meas. 0=12399
 viscous liquids, low-compliance diaphragm-capacitance gauge 0=19042
 100 kbar region, using refract. index of glass 1=12658
 Hg column with $\pm 10^{-8}$ accuracy 2=11319
 Si transistors 4=12946

Prisms, optical

- for deflection of light, invariance conditions 4=16204
 dispersion and dispersive power, effect of prism angle 1=5342
 dispersion through prisms and prism combinations 3=242
 double, small angled, min. deviation 2=5151
 Foster-Seeley, for doubled intensity, in modulation or demodulation 4=5372
 Glan polarizing 4=18391
 image rotation by oblique reflection 4=308
 for laser resonator, right angle 4=19267
 for laser tuning, single Brewster prism with dielectric coating 4=16690

Prisms, optical—contd

- Littrow, reducing astigmatism, by deformation 1=4461
 mirror-prism optical elements, wide angle scanning 0=8781
 in monochromators, possible substitution by diffraction gratings 4=8430
 optical-mechanical scanning techniques 0=14811
 polarizer, u.v. to i.r., double prism 4=24396
 polarizing, field of view of systems, theory 4=14405
 reflecting, for optical bench screen 3=243
 reflection, total, for autocollimation alignment 3=21527
 resolving power, for unequal intensity lines 0=12490
 roof, without ray pencil splitting 3=21526
 rotating, use in "moviolas" 0=166
 scanner for use with i.r. detector 0=8780
 silica, fused, inhomogeneity compensation 3=21528
 thin prisms, testing of deflection 3=235
 vacuum prism for refr. compensation in astrometry 2=926
 V values for prism materials, modified expression for calc. 4=28661
 Wollaston, as beam splitter, for shearing interferometer 1=2880

Probability

- See also Errors; Random processes; Statistical analysis.
 characteristic function rel. to Fokker-Planck methods 3=16491
 chem. reaction probabilities calc. 1=20725
 coincidence detection, optimum threshold 2=11247
 decision theory, for defining optical resolving power 3=16208
 dimer problem, covering of plane square lattice 2=35
 distribution of m objects in n boxes, problem 2=11246
 exchange reaction, quantum-mechanical calc. 0=3303
 extrapolation, reliability, over long periods 3=5327
 extreme probability paper, plotting rule 3=11673
 fragmentation of glass plates 0=2070
 generalized cumulant expansion method 2=19375
 information model in "taxonomic game" theory terms 4=21019
 least-squares plane through a set of points 2=6803
 likelihood detection of signal obscured by Markovian noise 4=27077
 linear stochastic operators 3=14037
 Markov processes and the H-theorem 3=11709
 master equation, power series expansion 1=7969
 Maxwell velo. distrib., derivation 3=16540
 measurement in qu. mechanics, probability amplitude rel. to prob. function 1=2698
 meteorological extremes, applic. of envelopes for ordered observations 3=13657
 Monte Carlo method, in quantum statistical mech. 2=21843
 PAPA, pattern recognition 2=2588-91
 performance prediction, range finder systems 3=18773
 probability density meas., with cathode-ray tube 0=2386
 probability distribts. asymmetry under time reversal 2=9144
 random variables, products, distrib. 2=21794
 Rayleigh distrib., generalized, moments 1=17986
 self-avoiding walks, limiting props., rel. to Ising model of ferromagnetism 0=10468
 sequential filling of line by intervals placed at random 2=19374
 stochastic model, destiny of individuals in multiplying medium 2=3655
 stochastic processes, first-order 0=3401
 theory, geometrical approach 1=10366
 time interval distribution, discrete binomial 3=1579
 wave-form product distribts., mean and variance 3=16

Projectiles

See Ballistics.

Projectors, optical

- cine projection objectives for wide-screen techniques 1=8247
 film, light transmission calculation 1=8218
 using heat absorbing filters, light transmission and temp. relationship 1=8217
 use of heat filters and cold mirrors 1=8216
 use of heat insulating filters and cooled mirrors 0=5151
 illumination system, design 0=3603
 scanning and measuring, for bubble chamber photos 4=27302

Projectors optical—contd

- system correcting spherical, reducing coma aberrations 0=3607
- with variable contrast 2=9382
- Pm³⁺, electronic levels 2=8060
- Pm¹⁴⁷ fission product ions, diffusion in UO₂ 2=6377

Promethium

- atom, binding energies of K and L levels 4=12368
- atomic beam mag. resonance 1=9900
- atomic h.f.s. in Pm¹⁴⁷, ¹⁵¹, nuclear moments eval. 4=989
- diffusion, anomalous, in Ag and Pb 3=13005
- ions, (Pm¹⁴⁷)³⁺, e.s.r. in La ethyl sulphate 1=20223
- spectra analysis, energy levels 1=17891
- spectrum, Pm¹⁵¹ in molten LiNO₃-KNO₃, dilute DCI 4=30381

Promethium compounds

- Pm sesquioxide, crystal structure, atomic, from X-ray powder reflections 3=18311
- Pm¹⁴⁷Cl₃ in LaCl₃ crystals, luminescence spectrum 0=11787
- Pm₂O₃, magnetic susceptibility, 25°C 4=1805

Prominences, solar

- (Heading abolished in 1963; for later entries see Sun, prominences)
- active and quiescent, comparison 0=12281
- active solar regions, 1952-53 rel. to geomagnetic storms 1=21102
- areas rel. to filament areas. 2=4790
- association with radio bursts 0=12255
- brightness, comparison with solar surface 2=4787
- chemical element occurrence 1=15411
- chromosphere, Ca II K line excitation 2=977
- chromosphere-corona transition layer rel. to u.v. radiation 2=978
- chromosphere, energy balance 2=979
- chromosphere, rel. to interplanetary debris 2=6979
- chromospheric line profiles 2=980
- chromospheric spicules and flare-surges, form. 2=2537
- classification of 254 prominences 1=15480
- condensation, from corona, in strong mag. field 0=6593
- coronal emission in vicinity 1=7993
- corpuscular emission, Arend-Roland tail, acceleration field 0=18730
- cycles of activity, long, and autocorrelation method 1=18100
- cycles 17, 18, 19, observations at Arcetri 1=18097
- east-west asymmetry, survey from 1933-60 2=13130
- eclipse observations (Oct. 1959) 1=5151
- erupting, 11 Apr. 1959, trajectories, vel. and accel. 1=9275-6
- erupting, 13 Jul. 1950, knot motion, vel. and accel. 1=9274
- erupting, 18 Jul. 1956, knot motion, vel. and accel. 1=9273
- eruptive 0=4901
- filaments, contrast variation with limb distance 1=15475
- formation, and coronal condensations, mag. field 0=6592
- granule contrast, centre-limb variation 1=15469
- heat conduction, and fire structure 1=11680
- heating, e.m. mechanism, mag. field strength, prominence lifetime 0=18758
- height distribution 1=7992
- limb intensity profile 1=15474
- loop 2=11132
- loop event, spectra, interpretation 1=7991
- rel. to magnetic disturbances, at Kakioko, 1924-58 1=21103
- magnetic field, polar zones 0=6601
- magnetic fields in, active and quiescent conditions 2=24117
- monochromatic line profiles during eclipse (Oct. 1959) 1=2618
- movements, analysis by meas. trajectory and velocity 2=2538
- noise storm at 201 Mc/s obs. 2=11158
- nonuniform physical props. along line of sight 2=972
- observations at Arcetri (1959) 1=18096
- photospheric faculae on solar limb 1=15477
- protuberance, quiescent, spectrum during eclipse of 15 Feb. 1961 1=15481
- quiescent, hydromagnetic model 1=25
- quiescent, temperature and turbulence from line-widths 0=6597
- and recurrent geomag. storms, correl. 0=12282
- rotational velocity, 45-80° solar latitude 1=2623
- sightline velocity distrib., temporal variation for active prominences 0=8502
- and solar cycle 1=15464

Prominences, solar—contd

- solar physics review 0=14407
- solar wind, terrestrial accretion 1=20806
- spectra, interpretation 1=7990
- spectroscopy and H α photography 0=18768-9
- spicules, chromospheric, brightness 2=15354
- spurious, caused by jet planes 0=18757
- telescope for correlation with sunspots 1=9277
- temperature conditions, spectral data 1=15482
- 20-21 Sept. 1955, photograms in H α light 0=6598
- white-light flare as bright loop prominence 2=974
- 1958, observations at Arcetri observatory 0=18756
- H β , Zeeman splitting 2=24117

Propagation

- See Acoustic wave propagation; Electromagnetic wave propagation.

Proportional counters

- See Counters, proportional.

Prospecting

- See Geophysical prospecting.

Protactinium

- crystal structure, X-ray study 0=1876-7
- ions, Pa²³¹, tetravalent, in Cs₂ZrCl₆, paramagnetic resonance h.f.s. 1=6420
- Pa²³³ holdup in Th fueled reactor 2=6063

Protactinium compounds

- absorption spectra 0=20656

Proteins

- action, in muscle, phys. chemistry 2=7049
- albumin dry films, semiconduction 4=22731
- bovine haemoglobin, semiconducting props. 2=6473
- collagen, n.m.r. study of hydration 2=16573
- collagen, piezoelectric effects, erratum 4=28635

 form factor asymptotic behaviour, Sachs sum rule and resonance 4=16886
 form factor, energy shift in h.f.s. of atomic H 0=466
 form factor, phenomenological theory, electron bremsstrahlung 1=10871
 form factor, from scatt., e-d, e-p 3=14971
 form factors from e-p scatt. analysis 3=14957

Protons and antiprotons—contd

- form factors, from electron scatt. at 100-250 MeV 3=2243
 form factors in free and bound states, similarity 2=18102
 form factors, from inelastic e-d scatt. data 4=19487
 form factors meas. 3=14980
 geomag. trapped, asymmetry effects at high energy 3=16292
 geomagnetic trapped in radiation belt 2=17202
 grain densities of tracks in emulsion 0=196
 gyromagnetic ratio 0=20130
 gyromagnetic ratio 2=22502
 gyromagnetic ratio, det. 1=19191
 gyromagnetic ratio, general article 2=18109
 gyromagnetic ratio, recommended value 1=2051
 helicity, from Λ decay 0=17330
 helicity, from Λ^0 hyperon decay 1=16901
 identification, with computer 0=12802
 injection method for tandem accelerator 2=17907
 ionization-momentum relation, in relativistic region 4=864
 ionosphere, charge exchange source 3=16242
 K⁻-p, production of strangeness -3 baryon, theory 4=9286
 magnetic deflector, "floating-wire" study 2=1518
 in magnetosphere, origin and energy 4=29319
 mass determination, in multiplate cloud chambers, from scatt. and residual range data 0=9309
 mass difference, n-p 3=6009
 mass, rel. to electron mass 0=5553
 mass difference, n-p, from T(d,n)He³ threshold 4=19610
 mass difference with neutrons, rel. to electron scatt. expts. 4=9187
 mass, theoretical connection with other atomic consts. 4=11009
 μ -meson capture, structure 0=356
 meson-theoretical struct. 2=20600
 n-p mass diff., S-matrix calc. 4=27839
 p-n mass difference 3=7840
 p-n pairs, γ -ray absorpt. 3=15052
 proton-neutron mass difference 2=13794
 proton-neutron mass difference, meson theory 0=1275
 neutron-proton mass difference 1=16767
 in non-spherical nuclei, distribution 1=10853
 nuclear emulsion tracks, radius meas. 2=1642
 nuclear p-n separation energies, tables 1=16964
 optical model operator 0=7447
 orbital calcs. for Iowa State University cyclotron 2=11742
 pairing correl. in nuclei 3=12542
 pairing energy in nucleus 3=10199
 photon scattering, dispersion relations 0=11130
 $\pi^- + p \rightarrow \pi^- + \pi^+ + n$ 1=10905
 polarizabilities, elec. and mag., higher-order terms 3=571
 polarization meas. from $p\bar{p} \rightarrow Y\bar{Y}$ ang. correl. 4=25101
 polarized beam, precession of proton spins 3=12456
 in proposed dimensional expression of mass 1=18239
 proton-antiproton annihilation into electrons, μ -mesons and vector bosons 2=9849
 protonosphere, distribution 1=20986
 p-p collisions, particle production, statistical model 0=12935
 \bar{p} -p interaction, $\Xi^- + \Xi^+$ pair prod. 2=12013
 $\bar{p} + p \rightarrow K_S^0 + K_S^0$, rel. to Sakata model 2=13797
 p-p- μ systems, appl. of Pluvineau method 0=2707
 p-p system, space and charge parities, annihilation 2=22501
 p- \bar{p} system, space and charge parities, π annihilation 1=19190
 p- \bar{p} system, space and charge parity, 2-meson annihilation 1=496
 \bar{p} -p, 20 and 120 MeV 4=9188
 $\bar{p} + p \rightarrow 2\pi^+ + 2\pi^- + n\pi^0$, π - π interaction 2=13802
 protons, 143 MeV, neutrons emitted at 0° 2=7987
 in quantum field theory, basic ideas 2=22378
 n-quantum transitions between spin-Zeeman levels 3=14034
 n-quantum transitions between spin-Zeeman levels 3=14035
 in radiation belt (Aug.-Sept. 1959) 2=6958
 in radiation belt, 1 keV to 1 MeV lifetime 2=4684
 radiation belt trapped, low energy anomalous component 2=19253
 role in nuclear physics, review 1=7237
 in scattering on Mg, 7.3-15.9 MeV 1=17095
 scattering at 128 and 162 MeV 2=22519

Protons and antiprotons—contd

- solar, ion prodn. in earth's atmosphere 2=19241
 solar, magnetic bays and aurora 1=1559
 solar, 1961 data 4=26937
 solvation mechanism, quantum mech. calc. 1=18397
 spin and charge states, generalized field theory 3=24603
 stability 1=5721
 stopping power of H_2 for, charge-exchange processes 2=18428
 structure, core and meson-cloud model 2=1680
 structure and form-factor 1=16837
 structure study, by meson photoprod. and Compton effect 1=13409
 synchrotron, 300-1000 GeV, experimental techniques 3=17004
 3π resonance, $T = 0$, from $\bar{p} + p$ interaction 2=1705
 total cross-sections for 765 MeV 1=683
 transfer, in collisions between nuclei 3=6296
 $B^{10}(He^3, p)C^{12}$, at 2.2 MeV, $p-\gamma-\gamma$ coincidences 1=17058
 C^{12} nucleus p^- and s^- , momentum distrib. 2=1893
 $Fe-p$, 82 and 105 MeV, tritium prodn. 2=12191
 H^4 state with $T = 2$, no evidence from $\gamma + He^4 \rightarrow \pi^+ + T + n$ 4=12079
 Po, long-range proton emission 1=7361

absorption

- air, stopping cross-section 40-250 keV 3=22133
 capture in Be 7 , at 0.8 and 1.4 MeV 0=7550
 elements, various, at 24.2 GeV/c 1=3185
 energy loss in rare-earth oxides 1=13790
 energy loss and straggling in range 1.5 to 4.5 MeV 2=3336
 explosives, range-energy relationships 3=17279
 graphite and diamond, at 1.1 MeV, ratio of atomic stopping power 1=12349
 hydrocarbon gases, stopping cross-section 40-250 keV 3=22133
 metals, eleven, stopping power for 28.7 MeV 4=902
 in metals, at ~ 1 MeV, optical transition radiation 0=20099
 in moderators and absorbers, free model 3=22460
 by nuclei, 25 BeV/c, nuclear radius 3=12649
 range, energy losses in liquid propane 1=19201
 range-energy meas. in Al, Cu, Pb, U, and emulsion 1=13421
 range-energy relation in Agfa K2 emulsion 0=5460
 range-energy relation, in various substances up to 100 MeV 0=5557
 range-energy relations, rel. to mean excitation potential 0=9360
 range-energy relations in nuclear emulsion 0=195
 range, multiple scatt. corrections 0=15354
 relative ionization near end of proton range, effect of multiple scatt. 0=20141
 in thin absorbers, 5 MeV, binding effect corrections to energy loss 0=1261
 VVNS films, energy loss at 4-30 keV 3=4394
 in Al foils, range of 14.7 MeV protons 2=3337
 Al, range, at 1-20 MeV, L-shell correction and I value 0=15354
 in Al, Be, C, Cu, Pb and air, range straggling, calc. 0=5560
 Al $_2$ O $_3$ films, energy loss at 4-30 keV 3=4394
 Au, range, straggling correction 0=15354
 C film energy loss distrib., 992 keV 4=27856
 C films, energy loss at 4-30 keV 3=4394
 He, stopping cross-section 40-250 keV 3=22133
 in Si, range-energy relationship 3=17113

angular distribution

- (α, p), p -shell nuclei, backward peaking 4=22131
 from (α, p) reactions on light and medium-wt. nuclei 3=19883
 complex nuclei, polarization 1=12191
 from deuteron diffraction scattering 1=13836
 $d(\gamma, p)n$, anomalous energy dependence 0=454
 (d, p) nuclear reactions 3=24965
 deuteron photodisintegration at 500-900 MeV 1=2102
 $d-p$, production of strangeness -3 baryon, theory 4=9286
 (d, p) reactions, distorted-wave Born approx. 1=19522
 (d, p) reactions, distorted-wave calc. 3=2487
 (d, p) reactions, $p-\gamma$ ang. correl., calc. using distorted-wave Born approx. 0=11416
 (d, p) reactions with d energies below Coulomb barrier 0=1416
 (d, p) reactions at 14.8 MeV on Li to Au, low-energy continuum 1=3456

Protons and antiprotons—contd**angular distribution—contd**

- (d, p) reactions on heavy nuclei 4=3689
 (d, p) reactions on heavy nuclei, calc. 2=3608
 deuteron stripping in Coulomb field 3=6287
 (d, p) stripping, rel. to "gross structure" spectra 3=6293
 (d, p) stripping reactions in C^{13} and O^{18} 1=11032
 deuteron stripping reactions, rel. to spin-orbit distortion 1=19514
 (d, p) stripping, rel. to "gross structure" spectra 2=16431
 d stripping, 23 isotopes of 11 elements 4=3648
 $d(d, p)$, 120-200 keV 3=22218
 elastic scatt. for 15 nuclei at 57 MeV, meas. 2=16399
 elastic scatt. on Ni^{64} and $Zr^{90-92,96}$ 2=443, 22805
 from elastic scatt., on photographic emulsion nuclei 1=19451
 from elastic scatt., on photographic emulsion nuclei 3=4633
 elastic scatt. at 22.2 MeV on 20 single isotopes 2=3561
 elastic scatt. on Zr^{90-91} , at 5.45 MeV 2=444, 22804
 elastically scattered on Li, Al, In and Au, at 160 MeV 1=3444
 fast protons, prod. by 75-350 MeV protons 4=3655
 focusing, 12 MeV, by mag. particle spectrometer 2=3342
 from $\gamma + d$ 3=4424
 by γ , 22 MeV bremsstrahlung, on $13 \leq Z \leq 50$, $p > 8$ MeV 3=19830
 inelastic scatt., high-energy, from mag. dipole levels, calc. 1=4864
 inelastic scatt. from nuclei, parity change det. 1=5904
 in interaction with emulsion nuclei at 9 BeV 0=9619
 neutron decay in polarized beam 1=500
 peaks near 180° , due to compound nuclear levels 3=17459
 proton-nucleon collisions, at CERN-PS energies 1=16778
 $n + p \rightarrow p + p + \pi^-$, KE distrib., meas. versus calc. 4=30227
 (n, p) reactions, DWBA calcs. 4=6350
 (n, p) reactions at 14 MeV in 3rd and 4th shell nuclei 2=3598
 $p-n$ scatt., 200 MeV 3=7866
 $p-\gamma$ ang. correl. symmetries in inelastic scatt. on nuclei, theory 2=22803
 ($p, 2p$) ang. correl. in DWBA 3=19841
 $p-p$ collisions, at 9 BeV 1=19196
 $p-p$ collisions, at 9 BeV 2=22510
 p -isotope ($A = 52$ to 65) scatt., 5.45 to 6.8 MeV 2=16396
 $p + n \rightarrow p + p + \pi^-$ + neutral particles at 9 BeV 2=288, 22511
 $p-p$ quasi-free non-coplanar scatt. 4=3650
 (γ, p) reactions on Li^6 to Au 0=13264
 (γ, p) reactions in Nb, In, Ta and Au 0=11432
 $p-S^{32}$ elast. scatt. 3=6240
 $p-n$ scatt., 200 MeV 2=23120
 $p-\pi^+$ scatt. in Saclay bubble chamber 2=2251
 photonuclear reactions, rel. to surface nuclear shape and optical anisotropy 3=15087
 photoprotons from deformed nuclei, theory 2=3551
 photoprotons, forward shift of maximum 0=9654
 $\pi^+ + d \rightarrow p + p$, differential cross-section, meas., 4=30258
 in $a^- - p$ scattering 1=12105
 recoils, double-grid ionization chamber 2=5507
 scatt., 6.8 MeV, 23 isotopes of 8 elements 4=3648
 in scattering on Be 9 , elastic, at 6.8 MeV 1=4866
 in scattering on emulsion nuclei at 8.7 BeV 0=7546
 in scattering, inelastic, on light nuclei at high energy, calc. 0=4089
 scattering, inelastic, on nuclei near giant dipole resonance, theory 1=11005
 scattering by Li^6 p -proton, ang. correl. 2=22801
 in scattering on Ni, Cu, Co at 5.45 MeV 0=7563
 7 nuclei, inelastic scatt., 40 MeV meas. 4=25384
 in stars, in emulsion stack, shower study 0=9470
 A^{36} , elastic scatt. at 1.494 MeV 2=3563
 $A^{36}(d, p)A^{37}$ 0=11421
 A^{40} , elastic and inelastic, 7.6-14.2 MeV 1=8724
 Ag , elastic scatt. at 6.8 MeV 1=8707
 from Ag scatterer, 6.8 MeV 1=13782
 $Ag[Br]-Ne^{20}$ reaction, 200 MeV 4=22232
 $Ag(\alpha, p)$ 3=4669
 $Ag(N, \alpha p)$ reaction 0=13248
 $Ag(N^{14})$, emission 1=8786
 Al, elastic scatt. at 6.8 MeV 1=8707
 Al, photoprotons 3=10326
 Al photoprotons, rel. to theory 2=424

Protons and antiprotons—contd

angular distribution—contd

from Al scatterer, 6.8 MeV 1=13782

 $p + n \rightarrow p + p + \pi^- + \text{neutral particles}$, at 9 BeV 2=288, 22511
 $p - n$ potl., scatt. phase shifts 3=7793
 $p - n$, pseudoscalar parameter introduction 4=30223
 neutron radiative capture, effects of parity nonconservation 1=19288
 $n - p$, with ~ 600 MeV neutrons, π^+ production 4=9208
 $p - n$, 290 to 970 MeV, ratio of possible reactions cross-sections 4=30227
 neutrons, tensor forces, distorted-wave approx. 2=5636
 (pn) collective state, rel. to (p, n) reaction resonance peaks 2=20619
 $p + \bar{n} \rightarrow \pi^- + \pi^- + \pi^+$, test proposed for $\pi - \pi$ resonance 1=5762
 $p(\bar{\nu}, \beta^+)n$, detection of the free antineutrino 0=3955
 $\bar{\nu} + p \rightarrow n + e^+$, calc. 1=3162
 $\nu + p \rightarrow \nu + \mu + e + p$, theory 4=9106
 $\nu + p \rightarrow p + e$ rel. to inner structure of the nucleon 1=16768
 in nuclear emulsion, knock-on electrons by 26 GeV protons 3=4387
 in nuclear emulsion, 6 BeV 2=16192
 nuclear emulsions, 6.3 GeV and 28 GeV/c, secondary particles, transverse momentum 4=19550
 nuclear emulsions, at 25 GeV, meas. 3=7847
 with nuclei, Al and Pt, at 25 BeV, mass analysis of secondary particles, high deuteron production 0=17582
 on nuclei, C, Fe, Pb, at 2.8 BeV, strange particle production 0=17427
 nucleon-antinucleon prod., dispersion relns. 2=16180
 $p - N$ collisions, 9 GeV azimuthal effects 2=281
 proton-nucleon collisions, multipole production and excitation 1=16778
 proton-nucleon collisions, 6.2 GeV in emulsion 0=12923
 $p - N$, inelastic, at 9 BeV 2=1684, 22512
 $p - N$ at 9 BeV, in nuclear emulsions, rel. to multiplicity 2=7856
 $p - N$, at 9 BeV in nuclear emulsion, rel. to multiplicity 3=6002
 $p - N$, 9 GeV, four momentum transfer and isobar mass 4=25090
 $p - N + \pi$, coupling consts., direct meas. 3=24594
 $p - N$ and $p - \pi$, strong, energy losses 3=17274
 $p - N$, secondary particle prod., angular distrib. 4=25089
 $p - \text{nucleon}$, up to 10 BeV, review 3=22120
 $p - N$, 26.7 GeV/c, effective target mass 3=19627
 with nucleons, in emulsions, π^\pm production 3=6001
 nucleons, free and quasifree, 14 GeV, in emulsions 4=19506

Protons and antiprotons—contd
interactions—contd

with nucleons, at 9 BeV, inelastic, ang. and momentum distrib. 1=19182
with nucleons, strange particle prod. calc. 3=7927
with nucleons, at 25 GeV, in emulsion 3=7848
peripheral analysis of double-pion prod. 4=3404
photon bombardment, pair production cross-sections 2=20288
photons, Compton scatt., dispersion theory 2=22472
photon elastic scatt., expt. and calc. 2=1671
with photons, $\gamma + p \rightarrow \pi^0 + p$, at 900-1200 MeV, cross-sections 0=15415
photon scatt., 50-300 MeV, model 2=7855
photons, Σ^0 prod., rel. to Σ^0 lifetime meas. 2=9928
photoprod. of π^0 -mesons on protons at 245 MeV 0=13045
photoproduction of π^\pm -mesons on H and D 0=13046
photoprotons on C at 245 MeV, quasi-deuteron analysis 1=8700
photoreactions, effects of γ - 3π interaction 1=9759
proton-photon elastic scattering above 300 MeV, analysis 1=16730
 π mesons, Λ^0 and K^0 associated prod. 2=13854
 π -meson photoprod. on protons, $(\gamma, 3\pi)$ effect 3=2296
 π -meson photoprod. amplitude, Regge poles 4=6104
 π photoproduction at high energies, connection with scattering 0=17396
 π^- production ground 3=4424
 π^- production, on p, 1-meson contrib. 1=19234
 π^- production, on p, 1-meson contrib. 2=22564
 π^+ mesons, 10-20 GeV/c total cross-section 2=13853
 π^- mesons, 1.3 BeV, 6 results, meas. and theory 2=9899
 π^- mesons, 5 GeV, multiple particle prod. calc. 2=9894
 π^- mesons, internal electron pair prod., obs. 2=5716
 π^- mesons, Y_1^* and K^* production 2=11982
 π -N higher reson. prod., character determ. using polarized γ 4=19572
 $p-\pi^\pm$, multiperipheral model 2=22599
 $p-\pi$ collisions, K^+-K^- production ratio 0=13059
 π , in $p + d$ collisions, anomaly, S-wave $\pi-\pi$ interaction 1=16846
 $\pi + p \rightarrow K^0 + \Lambda$, associated prod. and resonant states 2=9900
 $\pi + p \rightarrow K + \Sigma$ 2=306
 $\pi + p \rightarrow \Lambda + \pi + K$, resonance rel. to near threshold effects 4=9240
 $\pi-p$, near 1 BeV, π prod., momentum distrib. calc. 4=21890
 $\pi-p$, 9 GeV, forward photon prod. 4=16939
 $\pi-p$ pairs from $p-p$ collisions at 3.5 GeV, Q values 3=19624
 $\pi-p$, Panovsky ratio, by $\gamma-\gamma$ coinc. meas. 3=24769
 $\pi-p$, and $\pi-N$ 1.4 GeV reson., from cross-section and products 4=15096
 $p-\pi$, π production 3=4430
 $\pi-p$, $\pi^+\pi^-$ production, f^0 resonance obs. 3=22168
 $\pi-p$, 7 GeV two prong interaction, observation 4=27880
 $p-\pi^+$, at 308 MeV 2=22559
 $\pi-p$, at 600 MeV, in liquid H bubble chamber 3=7904
 $p-\pi$, 6.1-18.1 GeV/c, charge exchange cross-sections 3=15011
 $\pi-p$, 2 BeV, multiple pion production 4=15088
 $\pi + p \rightarrow Y + K$ and $Y + p \rightarrow Y + \pi$, rel. to Y-particle polarization 0=2596
 $p + \pi^- \rightarrow \pi^- + \pi^0 + \nu$ 2=16221
 $p + \pi^+ \rightarrow \pi^+ + \pi^0 + p$ at 820-900 MeV 2=22560
 $p + \pi^+ \rightarrow \pi^+ + \pi^0 + p$, resonance at 575 MeV 2=5711
 $\pi^\pm + p \rightarrow N + 2\pi$, isotopic spin indep. 3=7808
 $\pi^\pm + p \rightarrow \pi^\pm + \pi^+ + n$, at 1.75 BeV/c 2=20393
 $\pi^\pm + p \rightarrow 2\pi + N$ reactions and f_0 (1250 MeV) isospin 4=945
 π^- capture, high-orbital S-state 0=9417
 (π^-, p) , (π^+, p) cross-sections, 8.20 BeV/c 2=1713
 $\pi-p$, Fermi statistical theory, applic. to exper. data 0=9403
 π^-p inelastic interactions 4=25139
 π^-p ; K^0 , $K\bar{K}$, ΛK prod. at 7 BeV, ang. and momentum distrib. 4=27898
 $\pi^- + p \rightarrow K + \bar{K} + N$, from $K\bar{K}$ reson. width 3=17337
 $\pi^- + p$, $K^0\bar{K}^0$ prod. at 10 GeV/c 4=30254
 $\pi^- + p$ and $K\pi$ reson. at 726 MeV 3=19698
 $\pi^- + p \rightarrow K^0 + \Lambda^0$, partial-wave analysis 4=9242

Protons and antiprotons—contd
interactions—contd

$\pi^- + p \rightarrow K + Y + \pi$, final state interact. 2=13878
 $\pi^- + p \rightarrow K + Y + n\bar{n}$ or $\bar{\Sigma}^- + 2K + n\bar{n}$, by 10 GeV/c anisotropies 4=30255
 $p \rightarrow \pi^- \Lambda K^0$ at 829 MeV, reson. 4=25193
 $p + \pi^- \rightarrow \Lambda + K^0$, rel. to $\Lambda\Sigma$ parity 3=4462
 $\pi^- + p \rightarrow \Lambda + K$, at ΣK threshold, meas. 4=9291
 $p + \pi^- \rightarrow \Lambda + K^0$ 1=10924
 $\pi^- + p \rightarrow \Lambda^0 + K^0$ 2=13856, 22628
 $p + \pi^- \rightarrow \Lambda^0 + K^0$ 3=6043
 $\pi^- + p \rightarrow \Lambda^0 + K^0$, phase amplitude 1=5769
 $p + \pi^- \rightarrow n + \eta$ ($\eta \rightarrow 2\gamma$), charge exchange, 1.55 to 4.5 BeV/c 4=12039
 $p + \pi^- \rightarrow n + \pi^0$, charge exchange, 1.55 to 4.5 BeV/c 4=12039
 $\pi^- + p \rightarrow n + \pi^- + \pi^+$, 1.7 BeV/c, and ω decay, 2 π mode 2=19692
 $\pi^- + p \rightarrow n + \pi^+ + \pi^-$, f^0 resonance (1250 MeV) spin 4=944
 $\pi^- + p \rightarrow n + \omega$, $\omega \rightarrow \pi^+ + \pi^-$, from three e pairs 4=3471
 π^-p , one-pion exchange model and $\pi-\pi$ resonance 1=19255
 π^-p , Panofsky ratio from pair prod. data 4=11980
 p (24 GeV)- π^- (16 GeV/c) peripheral ("quasi-elastic") 2=22507
 $\pi^- + p \rightarrow \pi + \pi + N$, 3 BeV/c, and $\pi-\pi$ scatt. 3=19686
 $p + \pi^- \rightarrow \pi^- + n + \pi^- + \pi^+ + \pi^+$, 4 GeV/c 3=4434
 $\pi^- + p \rightarrow \pi^- + \pi^0 + p$, two dipion reson. 2=11977
 $\pi^- + p \rightarrow 2\pi^- + \pi^+ + p$ at 4.7 GeV/c 2=20392
 $\pi^- + p \rightarrow \pi^- + \pi^+ + n$, high momentum transfer, Regge-pole π behaviour 3=22173
 $\pi^- + p \rightarrow \pi^- + \pi^+ + n$, one-pion-exchange model 3=7893
 $\pi^- + p \rightarrow \pi^- + \pi^+ + n$ or $\pi^- + \pi^0 + p$, OPE model 4=16935
 $p + \pi^- \rightarrow \pi^- + \pi^+ + n$, rel. to $\pi-\pi$ interaction cross-sections 4=6109
 $\pi^- + p \rightarrow \pi^- + \pi^+ + n$, spark chambers, low track material, 3=24563
 $\pi^- + p \rightarrow \pi^- + \pi^+ + n$, 360-800 MeV meas. 3=17316
 $\pi^-p \rightarrow \pi^-p\omega^0$, and $\pi^-p\pi^0 \rightarrow \pi^-\omega^0$ 3=19678
 $\pi^- + p \rightarrow \pi^- + p + \pi^- + \pi^+$, 900 MeV, meas. 3=10149
 $p + \pi^- \rightarrow \pi^- + p + \pi^- + \pi^+ + \pi^0$, 4 GeV/c 3=4434
 $p + \pi^- \rightarrow \pi^- + p + \pi^0$, at ~ 1 GeV, effect of $\pi-\pi$ resonances 0=13021
 $\pi^- + p \rightarrow \pi^0 +$ charged particle, cross sections 4=12048
 $p + \pi^- \rightarrow \pi^0 + n$, charge transfer 3=7884
 $\pi^- + p \rightarrow \pi^0 + n$, meas. at 20.7 and 31.0 MeV 2=13851
 $\pi^- + p \rightarrow \pi^0 + n$, 6-16 GeV meas. 4=21849
 $\pi^- + p \rightarrow \pi^+ + \pi^- + n$, deviation from one-pion exchange 3=19675
 $\pi^- + p \rightarrow \pi^+ + \pi^- + n$ and $f^0 \rightarrow \pi^+ + \pi^-$ 1260 MeV reson. 3=17313
 $p + \pi^- \rightarrow \pi^+ + \pi^- + n$, 240 MeV 3=17318
 $\pi^- + p \rightarrow \pi^+ + \pi^- + n$, 210-230 MeV, analysis 4=6111
 $\pi^- + p \rightarrow \pi^+ + \pi^- + n$, $\pi^+-\pi^-$ reson. search, 280-350 MeV, 4=30265
 $p^+ \rightarrow \pi^+ + \pi^+ + n$, 200-700 MeV, strip approx. inapplicability 3=2295
 $\pi^- + p \rightarrow \bar{p} + d$, meas. and virtual nucleon exchange interpret. 4=3448
 $\pi^- + p \rightarrow p + \pi^- + m\pi^0$, 2.8 GeV/c, 1 GeV $\pi^-\pi^0\pi^0$ reson. 4=935
 $p + \pi^- \rightarrow \pi^- + n\pi^0$, average number of pions, calc., 4=30257
 $p - \pi^- \rightarrow p + \pi^- + m\pi^0$, 2.6 BeV/c 4=12038
 π^- at rest + $p \rightarrow \pi^0 + n$ to stopped π , ratio, in LiH, CH and CH_4 3=19677
 $\pi^- + p \rightarrow \Sigma^0 + K^0$, pseudoscalar and vector exchanges analysis 4=12053
 π^-p , single-pion prod. at 905-1100 MeV 4=3452
 π^-p , two-prong, quasielastic nature at 7 and 16 GeV/c 4=25141
 $\pi^- + p \rightarrow Y_2^* + K$, Y_2^* search 3=17349
 π^-p , 276 MeV, total cross-sections 3=22177
 π^-p , 310-454 MeV, π^+, π^0 , and n production 4=25138
 π^-p , 340 MeV, pion prod. meas. 3=22176
 π^-p , 604 MeV, π production mechanism 4=21899
 π^-p , 871 MeV, double pion prod. meas. 4=16938
proton- π^- -meson, at 1 BeV, Fermi's statistical theory 0=13070
 π^-p , 1.5 BeV/c, prod. of ΛK^0 and $\Sigma^0 K^0$ 4=3451
 π^-p , 1.5 BeV/c, prod. of $(Y_1^+)^0$ 4=3450
 π^-p , 1.59 GeV/c, bubble chamber study 4=12033
 $p-\pi^-$ at 1.6 GeV/c rel. to strange particle prod. 2=22646

Protons and antiprotons—contd
interactions—contd

p-p interactions, 3-10 GeV/c, total cross-sections 1=2053
 $p + p \rightarrow \bar{e} + e$, rel. to e.m. form factors 2=13793
 $\bar{p} + p \rightarrow K_1^0 + K_1^0 + \pi^+ + \pi^-$, reson. search, only $K_1^0 \pi^+ \pi^-$ at 1.230 GeV/ \sqrt{s} 4=19575
 $p + \bar{p} \rightarrow K_1^0 + K_2^0$ in Schwinger's $U_3 \otimes U_3$ symmetry 4=30225
 $\bar{p} + p \rightarrow \bar{\Lambda} + \Lambda$ or $\bar{N}^* + N^*$, absorptive effects in one-particle exchange 4=19517
 $\bar{p} + p \rightarrow \bar{\Lambda} + \Lambda$, at 1.61 and 1.99 BeV/c 1=5727
 $\bar{p} + p \rightarrow \Lambda^0 + \bar{\Lambda}^0 + \pi^+ + \pi^-$, 3.25, 3.69 BeV/c, Y_1^* , Y_1^* , $Y_1^{*-} + Y_1^{*+}$ pair, prod. 3=22209
 $\bar{p} + p \rightarrow \bar{N}^* + N^*$, single- π , - ρ exchange contribs., error 4=27857
 $\bar{p} + p$, and one pion exchange model, (3 reactions) 4=19518
 $\bar{p} + p \rightarrow \pi^+ + \pi^- + \pi^0$ 3=10117
 $\bar{p} + p \rightarrow \bar{n} + n$, $-\bar{n} + n + \pi^0$, $-\bar{n} + p + \pi^-$, cross-sections 2=18142
 \bar{p} -p and \bar{p} -C interactions, 75-200 MeV 0=11172
 \bar{p} -p, \bar{p} -d and \bar{p} -n annihilation, π -meson prod. 0=11199
 $\bar{p} + p \rightarrow \bar{p} + p + \pi^0$, $\bar{p} + n + \pi^+$, $p + \bar{n} + \pi^-$, cross-sections 1=16788
p-p scatt., baryon pair prod. inconsistent with octet unitary symmetry model 4=19518
 $\bar{p}p$ scatt., high-energy, Regge pole model 2=20339
p-p scatt., inelastic, diff. patterns model 4=15057
 \bar{p} -p scatt., Regge poles and polarization 2=22496
p-p scattering, absorptive, rel. to p-p scatt. 4=15059
p-p scattering, diffraction peaks, shrinkage 3=22121
 $\bar{p} + p \rightarrow \bar{\Sigma}^0 + \Lambda$ or $\Sigma^0 + \bar{\Lambda}$, at 1.99 BeV/c 1=5727
 $\bar{p} + p \rightarrow \Sigma^0 + \Lambda$, at 2 GeV/c, possible evidence 0=13067
 $\bar{p} + p \rightarrow 3\pi^+ + 3\pi^- + \pi^0$, multipion reson. 3=2258
 \bar{p} -p total cross-sects, above 10 GeV 3=4260
p-p, total cross-sections, 0.58-5.3 GeV/c 2=22516
 $\bar{p} \rightarrow \pi^+ + \pi^-$ at rest 2=22522
 $p + \bar{p} \rightarrow 2\pi^+ + 2\pi^- + \pi^0$, asymmetry energy dependence 3=17272
 $\bar{p} + p \rightarrow 2\rho^0 \rightarrow 2\pi^+ + 2\pi^-$, two-particle effective mass distrib. 4=12006
 $\bar{p} + p \rightarrow \bar{Y} + Y$, schemes for polarization meas. 4=6138
 $\bar{p}p$ state as π^0 1=13308
polarization in $\bar{p}C$ scattering 1=9754
scattering, elastic, with protons, rel. to TCP theorem 3=2264
scattering, in nuclear matter 0=5748
scattering by nucleons, calc. assuming charge independence 0=11203
scattering, \bar{p} -p, 7, 2-12.0 BeV/c, and Regge pole shrinkage 4=9202
tracks in nuc. emulsions, multiple scatt. in small cells 4=27858
Al-p, and Be-p reactions at 10-30 BeV 2=20627
in H, stopped, recent bubble chamber experiments at C.E.R.N. 4=16841

Pumps

See also Vacuum pumps.
air-pump, centripetal, operated electromagnetically 0=8686
circulating, for reaction kinetics obs. 4=23636
e.m., thermal processes 0=10792
electromagnetic, d.c., theory 0=9149
fast twin pump for two liquids at variable volume ratios 1=9376
gas circulation, all-glass 2=17497
gas circulation, 14 l hr $^{-1}$ for 4 cc displacement 4=21164

Pumps—contd

- gas, electromagnetic for 1000 atm pressure and -196°C 4=8234
- ion drag, using razor-edge emission 2=2785
- liquid osc., approx. calc. 4=18165
- mixed flow, cavitation in impellers 4=21081
- for shaped flow of ultraclean solutions 1=12859
- Toepler, with built-in gas quantity meter 4=21165

Pyroelectricity

- CdSe 3=8556
- KLiSO₄, current, near transition point 2=16770
- KNO₃, ferroelec. phase III 2=4092
- LiH₂(SeO₄)₂, pyroelectric constants 3=10881
- NaNO₂, rel. to spontaneous ferroelec. polarization 2=4091
- NaNO₂, spontaneous polarization 2=2207
- Pb(Ti,Zr)O₃, effect of heating 3=12929
- Pb(Zr_{0.95}Ti_{0.05})O₃ ceramic, primary effect 4=22785
- UO₂(NO₃)₂, hexahydrate and - deuterate 0=18138

Pyrometers

- absorbing filters 0=10812
- automatic emissivity-compensated 3=7383
- colour 4=18462
- design, for surface and inside temp. of glass 0=6988
- disappearing filament, OMP-019, contrast device for reading error reduction 4=24416
- effect of Cs and K vapour atmospheres on pyrometric meas. 4=5429

Pyrometers—contd

- for flames, two frequency 3=9644
- gas temp. meas., 1000°-5000° C 4=11395
- high relative reproducibility, sensitivity 2=7445
- i.r., for sewing needle temp., during operation 3=14403
- infrared, for 500-800°K, errors 1=16152
- light sources, secondary, tungsten strip lamp suitability 3=9643
- modified, for temp. meas. 4=27361
- multicolour, for temps. below 1500° C, review 4=16276
- optical, corrected readings, table 1=8257
- optical, equipped with polarizer, for temp. of glowing metals 1=18667
- optical, meas. of brightness temp. of shielded surface 2=7442
- optical, numerical eval. of temp. 3=3914
- optical, using polarized light 0=12537
- optical pyrometry of flames, review 2=19750
- optical, review 2=15791
- optical, for temp. meas. under adverse conditions 4=11393
- optical, temp. scale realization 2=19751
- optical, review 4=2871
- PbS photoconductive cell as balance detector for relatively low temps. 4=5431
- photoelec., detection limits 3=1859
- photoelectric optical pyrometer 1=6980
- pyroelectric thermal receiver, ferroelec., sensitivity 2=2929
- pyrometry of metals in near i.r. 0=8855
- radiation and optical, photoelec., det. limits 3=1859
- radiation pyrometry, possibilities in blue-violet and u.v. regions 2=126, 9439
- radiation, for rapidly changing temps. 2=9436
- radiation, recording, using thermistors 3=11408
- for slightly heated objects, theory 4=11394
- spectropyrometer, 400°-1000° C, using i.r. monochromator 4=16277
- standard, high intensity, pulsed Xe source 3=24000
- temp. depend. luminescence of Zn-Cd sulphide 0=1062
- in temp. measurement of unenclosed bodies 0=2273
- using total radiation fluxes received by two systems 2=11523, 13478
- tungsten ribbon lamp, brightness variations 4=11324
- tungsten vacuum-lamp, filament temp. distribution 1=8233
- use of pyroelectric detector for sub-mm wavelength 4=16287
- using ferroelectric bolometer, for astronomical applications 4=27369

Quantum chemistry

(Heading introduced in 1961)

- adiabatic and isolated susceptibilities, theory 1=12813
- atomic wave-functions, accuracy 2=6083
- atoms, molecules and their interactions, semi and non-empirical theories 3=12745
- biosynthesis 2=7049
- crystal surfaces 2=3870
- fluorescein, spectra, by LCAO MO method 3=2647
- hydrides, ordering of bond strengths 4=3845
- hydrocarbons, alternant, different orbitals for different spins 4=15319
- macromolecules synthesis and structure 3=20035
- many-electron theory at atoms and molecules 2=6076
- many-particle problems, Gauss integral transform method 1=17250
- molecular adiabatic energy surfaces using "atomic associations" method 4=15320
- pair correlation atom. and ion energies, separation and addition 4=15832
- present-day state, review 1=858
- quasi-chem. equilib. theory, many-body Hamiltonian 2=11298
- quasiequilibrium reaction rate consts. 4=62
- reactions, quantum theory 4=4688
- reactivity, resonance theory, correlation with LCAO-MO method 2=6198
- and solid state physics, conference 2=4520
- tunnelling corrections for unsymm. Eckart potential 2=10964
- Uppsala course (1960) 1=5959
- valence-bond structures and matrix elements for any multiplicity 3=6382
- virial theorem application 1=2312
- H bimolecular exchange reaction 2=8905
- H bond, double potential well 2=6212

Quantum electrodynamics—contd

- S-matrix, closed normal form with external e.m. field 4=21799
 S-matrix, soft photon contribution 1=10830
 S-matrix theory deriv. for charge conserv. 4=27747
 scalar, matrix elements, i. r. singularities 4=5925
 scalar, 2-charge renormalization group 0=7273
 scattering amplitudes, high energy 3=12390
 scattering matrix coeff. functions, local regulation 2=16117, 20226
 scattering matrix, with Pauli interaction correction 0=20074
 scattering, Möller and Bhaba high energy, non-local effects 4=19374
 scattering processes, radiative corrections 3=12423
 Schwinger-Dyson eqn., unrenormalized, for Green's function 4=9055
 Schwinger's model covariance difficulty 4=21735
 self-consistent field theory 2=5564
 self-consistent field theory, deriv. of Pauli exclusion principle 3=10018
 self-energy differential equation 4=21730
 several interacting fields, S-matrix elements 0=15241
 at small distances, dispersion relations, test 0=12819
 at small distances, feasible tests 0=11077
 at small distances, $K^0 \rightarrow \mu^+ \mu^-$ radiative decay study 0=15422
 at small distances, rel. to e^+e^- scatt. 0=9337, 17304
 small distances, rel. to electron-positron pair prod. 2=20321
 at small distances, feasible tests 0=11077
 at small distances, test, photoelectric effect and pair annihilation 1=11078
 small Pauli term, possible existence 0=20029
 spin-zero particles, 4-vertex function, i. r. catastrophe 0=20023
 spinning particle precession, tensorial eqn. 4=8065
 spinor, modified perturbation method 4=27750
 stable sister particle with nonzero mass no. 4=19349
 statistical, gauge invariance relations 0=5473
 statistical light beams, semiclassical and quantum mechanical equivalence 3=16528
 and statistics, classical oscillators, radiation field 4=5092
 structure-independent, in elec.-dipole approx. 2=13722
 supersymmetries and essential observables 2=2627
 supplementary condition 1=13281
 test in electron scatt. on α -particles 0=3916
 Tomonaga's method, applications 1=9629
 transition phenomena, Cherenkov radiation and electron-positron pair conversion 1=16652
 two-body problem, electromag., relativistic calc. 3=23769
 two-complex formulation, electron propagator 4=27745
 two-compound, renormalization 2=1650, 20225
 twofold vacuum expectation value, uniqueness property 1=2009
 unstable particles, e.m. props. 2=11856
 vacuum 2=20024
 vacuum double refraction, and electron pair prod. 4=27748
 vacuum expectation value of three-point function 3=7778
 vacuum polarization, absence, rel. to convergence 2=3260
 vacuum polarization, due to charged bosons 0=7271
 vacuum polarization, effects on energy levels of μ -mesic atoms 0=17672
 vacuum polarization, effects on p-p scatt. 0=17335
 vacuum trajectory 4=19371
 validity limit, review 3=4358
 validity, short range from $e^+ + e^-$ to 2γ or 2μ 4=25071
 Van der Waals forces, general theory, application 1=15706
 Vavilov-Cherenkov radiation investigation 1=19170
 vector current conservation, e.m. violation 4=15013
 vector field propagators, choice 4=27743
 vector gauge field rel. to nonzero mass 3=5919
 vector meson, charged, interacting with e.m. field, theory 3=552
 vector particle mass in gauge invariant field 4=24969
 velocity of light in mag. field, quantum effects, possible exptal. det. 1=9465
 verification for short distances, Compton scattering and pair annihilation tests 1=423
 vertex function, high-energy theorem 0=17218
 vertex function, single log. approx., asymptotic value 3=24587
 vertex part, asymptotic form 1=19095
 vertex part, asymptotic form 3=4319

Quantum electrodynamics—contd

- wave-function renormalization constant, finite value 0=17217
 wave propagation, in Lorentz systems 0=12465
 weakly perturbed system, light absorption and emission 1=13913
 Weizsäcker-Williams relation for matrix elements 2=4937
 Yang-Mills field, scattering of quanta 4=11878
 H atom, metastable 2s state, quenching by laser beam 4=9655
 H atom, two-photon ionization 4=22318

Quantum statistics

crystal lattice mechanics meas., low temp., 1000 Mc/s 4=30057
crystal oscillator, plated, for sputtering meas. 1=4671
crystal phonon scatt. of He-Ne laser light in cavity for freq. translation 4=24899
crystal structure 4=10546

Quartz—contd

crystalline and fused, dielec. constants rel. to temp. 3=25392
crystals, electron irradiated, optical props. 2=10428
crystals, mechanism of growth 0=18299
defect channels along optic axis 1=11212
defect structure 0=13530
defect structures on polished surfaces 4=17837
defects, large-scale, on fracture surfaces 2=2087
deformation, around $\alpha = \beta$ transform. temp. 3=15990
dielectric breakdown in high transient stress 2=12574
dielectric const. and refractive index, on fast n irradi. 3=17929
dielectric loss due to impurity cation migration in α -quartz 4=26104
dielectric loss, i.f., at low temps. and imperfections 3=20157
dielectric permittivity, sub mm, compared with Rexolite 4=4198
dielectric props., temp. var. and alkali impurity imperfections 4=12739
diffusion of Ag in quartz in elec. fields 1=12404
diffusion coeffs. of He 1=3685
Diffusion of H 3=8452
diffusion of O 3=2831
diffusion, substitution of Ag^+ for Li^+ ions, pot. and ionic charge 3=17788
disks, extensional vibs. 3=5482
dislocation obs. by etching 3=25284
dislocations, X-ray diffract., topography 0=1587
E'-centres, electron spin-lattice relax. 3=13009
E₂'-centres, e.s.r., theory and expt. 3=13008
effect of neutrons 1=17592
elastic const., fourth order, from non-linear acoustic reson. effects 4=16179
elastic constants, electric field change tensor, d.c., from reson. freq. changes 3=23009
elastic constants, neutron irradi. effects 0=11967
elastic constants, temp. coefficients 2=21393
elastic and current oscillations, during Ag^+ and Cu^+ conduction 3=25412
elastic, dielectric and piezoelectric props., dynamic meas. 1=5041
elastic moduli, zero-field, acoustic meas. 2=23727
elastic waves, 600-1200 Mc/s, generation 4=21232
electrical conduction by Ag^+ ions 1=11268
electrical conductivity, effect of γ -irradiation 2=3996
electromagnetic wave propag. in, harmonics, intensities and polarizations 3=24468
electro-optic effect, direct, meas. at u.h.f. 4=1743
electrostriction coeffs., Z-cut 0=11750
etched and ground regions, surface texture 1=20659
etching depressions using HF 4=23985
etching, magnetic field and X-rays, no effects 4=29037
extinction bands, correl. with plasma resonance 0=7876
F-centres, acoustic saturation 0=13732
fibre, counter torque adaptation of Curie-Chéneveau magnetic balance 0=19872
fine grinding, kinetics 0=21151
flat layers in contact with ice, sliding expts. 1=14932
fused and crystalline, structural defects 0=7877
fused and crystalline, thermal cond. 0=7859
fused, delayed u.s. pulse detection 2=2718
fused, diffusion of H_2 and D_2 2=6366
fused, elastic const., γ -irrad. effects 0=16203
fused fibres, Young's modulus variation with diameter 1=1298
fused, ground surfaces, diffusion of u.v. and visible light 0=14787
fused and irradiated, e.s.r. and thermoluminescence 0=10237
fused, Ne diffusion 1=17558
fused, phosphoresc. due to u.v., decay 2=16849
fused, photoemission 0=7141
fused, refractive index 0=2229
fused, u.s. attenuation, up to 1 kMc/s, rel. to temp. 4=12627
glass, colour centres rel. to γ -irrad. 2=16667
glassy, optical absorption in $\lambda = 150 - 275 \mu$ range 2=7341
grains, bombard. target, ion and electron emission 4=8826
grains, surface elec. cond. meas. rel. to humidity 2=21111
grinding of particles 3=8912
heat conduction determ. by velocity method 2=5197
heat pulse propag., low temps., and phonon traject. 4=25867

Quartz—contd

- heat transfer with liq. He II 1=13034
hydrogen-containing defects, i.r. spectral obs. 2=6320
hypersonic resonance 1=8177
hypersonic resonance from 3000 to 10 000 Mc/s 4=7053
hypersonic wave attenuation "bottleneck",
below 2° K 4=22485
hypersonic wave attenuation, effect of crystal orientation
and neutron irradiation 0=7867
i.r. absorption bands, ~ 3 μ α -phase study 0=18128
i.r. absorption, of defects 0=16070
i.r. absorption, effect of electrolysis, n-irrad. and
heat treatment 1=3847
i.r. absorption, ~ 3 μ 0=4416
impacted, piezoelectric behaviour 1=7696
imperfections, study by light scattering 0=11619
indentation depth, of steel projectile 0=10629
inert gas sorption at surface, in electrodeless dis-
charge 4=20821
interference phenomena, convergent light 0=2243
internal friction, decrease on elec. purification 4=15715
internal friction, effect of ionizing radiation 3=23302
internal friction, rel. to growth rate 2=10740
internal friction meas. 3=13336
internal friction measurement 1=9087
internal friction of strands at low freq., expt. 4=13447
interstitial clusters, due to neutron irradiation 3=10647
ionic charge exchangeability, Ag⁺ for Li⁺, from
pot. 3=17788
irradiation, optical effects, defects and paramag.
res. 4=28507
irradiated, optical absorption 0=16060
irradiated, u.v. absorption study 1=7708
irradiation effects by positive ions, surface refractive
index changes 0=13569
irradiation effects, and short-range order 0=15876
Lamb waves, velocity calc. 2=9338
laser, optical phonon type 4=30094
lattice constants, precise values 2=15014
lattice defects, rel. to neutron irradiation 3=22765
light absorption and scattering, distinction 0=5134
light emission by vitreous quartz, γ -irrad. 4=26246
light scattering coeff. of Kubelka-Munk theory 4=17556
luminescence centres in synthetic quartz, sector
distrib. 4=20486
luminescence, X-irrad., powder specimens 1=6227
luminescence, X-ray induced 2=6602
in Lyot-type birefringent filters 0=5153
masers, optical phonons, quantum electronics 3=9966
mechanical Q improvement during crystal growth by LiF
addition 2=21481
melting, structural changes 0=10321
in mine dust, i.r. spectroscopic determination 0=3337
mineral, shadows, due to gravity 4=13556
mirror, mount design rel. to rocket instru-
mentation 4=24360
mirrors, epoxy-resin bonded, for telescopes 4=5364
morphology of crystal cavities 0=4576
Mossbauer effect, of Fe⁵⁷, fused, similar to pyrex
glass 4=15405
natural plates, far i.r. absorption spectra 4=10207
as neutron activation sample container, evaluation 2=17112
neutron-irradiated, e.s.r. 1=11482
neutron-irradiated, heat capacity at low
temps. 4=6749
optical absorption, bulk coeff. rel. to wavelength 4=15595
optical absorptions, radiation induced 1=12406
optical components of fused quartz 3=16748
optical constants, i.r., temp. depend. 2=18788
optical harmonics, freq. ratio meas. 2=17605
optical props., i.r. lattice bands of α -quartz 1=3845
optical props. in i.r., theory 2=4154
optical rotation, effect of irradiation by
2 MeV electrons 1=11355
optical rotatory dispersion 0=2257
optical rotatory dispersion 1=16122
optical second harmonic generation, by laser
beams 4=28666
oscillator, BT-type, high Q 4=14252
oscillator for standard-frequency
generators 4=18021
percussion figures 0=3157

Quartz—contd

- phase transformation due to neutron irradiation 4=26564
phase transformations, Kr⁸⁵ diffusion meas. 2=4361
phonon-maser postulated in α -quartz 4=6718
phonon viscosity, effect on acoustic wave attenuation and
dislocation motion 0=6043
photoelastic examination of vibrating crystal 1=97
photoelectric emission, after crushing and
coloration 3=14634
photoluminescence of Ag-doped material 2=14725
piezoelec. oscillations and u.s. image conversion 1=6919
piezoelec. oscillations, effect of d.c. field 1=17855
piezoelectric modes, visual observation 3=21469
piezoelectric oscillations of slotted crystals 3=15625
piezoelectricity of α -form at high transient stresses 2=1374
piezoelectricity, principle coefficient, on hard-
sphere model 1=10083
piezoelectricity, two-dimensional statical defor-
mation 2=10566
plate, AT cut, frequency spectrum 3=5481
plate vibration in steady electric field 1=187
polarizers, circular, for i.r. work design calcs. 2=17654
powder, embedded, dielec. props. 0=3723
powder, existence of "flow layer" on particles 1=6557
powder, 3 μ dia., disturbed layer thickness 4=13660
powders, ground, respirable size, distributed layer 3=16128
powders, ground and shattered, X-ray diffrn. 3=3352
prism faces, micro-disk patterns 4=30878
production in SiO₂, fused, by n irradiation 4=4552
quantum electronics of optical phonons 4=24925
quartz, thermionic exo-emission 1=18914
radiation effects, by X-ray scatt. and diffr. 3=8473
radiation induced defects, obs. by u.s. and lattice wave
interaction 4=20263
Raman band intensities in Stokes region, temp.
depend. 1=5052
Raman light scattering in, near 2nd-kind phase-
transitions 0=20974
Raman scatt., ang. depend., 40-140° 3=20463
Raman spectra, linewidths and intensities, for
X-modification 2=2243
Raman spectrum, neutron 4=26216
range of H₂⁺, D₂⁺, He⁺, Ne⁺ in, at 7.5-52 keV 1=336
reactor-radiation defects, generation and annealing
out 2=20987
reflection coeff., meas. with vacuum u.v.
reflectometer 0=16829
reflection of X-rays by 1010 plane 2=14988
refraction and dispersion, far i.r. 2=18791
refractive index, i.r. absorpt. 2=21249
refractive index change during electrolysis 1=10092
refractive index 180-500 μ , by Michelson
interferometer 4=1703
refractive index and transmission, 50-200 μ 1=3817
refractivity and scattering of light, rel. to
defects 1=19949
resonator, for filter, spurious response tests 4=21650
resonator, polarizing field effect on frequency,
theory 2=16796
resonators, high Q, for Soviet freq. standards 2=13301
resonators, transient freq. excursion 3=14764
in rocks, piezoelectricity 0=2928
rose coloured, Ti colour centres 3=8459
sand, flow-stick transition 4=23538
sand, thermal coeffs. rel. to temp. and porosity 2=10328
second harmonic generation of laser beams 3=17083
second harmonic generation of light 3=1839
selective diffusion of He through quartz 1=10542
shock-wave compression, crystals and fused 2=6727
single crystals, far i.r. absorptn. at liquid He
temps. 3=3006
sintering in vacuum, phase transformations 1=20399
soldering, using active metals 1=4165
sound absorpt., temp. gradient produced calc. 4=17354
specific heat, 2-4° K 0=9852
spectra, emission, infrared 1=8998
spectrum absorption bands, smoky, heat treatment
effects 4=1742
spectrum, i.r., rel. to co-ordination 4=1744
spin-lattice interaction, phonon generation 2=18952
spin-lattice relaxation, rel. to neutron irradiation 3=18136
springs for sorption balances, winding
device 4=4998

Quartz—contd

sputtering, by Kr ions 4=12825
 sputtering by Xe⁺ 1=3026
 stress analysis for hollow rotating cylinder 4=21068
 stress relaxation, by He or proton irradiation 4=15507
 structure, microisomorphism, 10 natural and 35 synthetic specimens 1=15084
 surface finish, reducing energy losses, frequency standard 1=15172
 surface properties, when highly dispersed 0=12114
 synthetic, amethyst quartz, growth 0=18314
 synthetic crystals, light scattering 4=22884
 synthetic, effect of impurities on growth 0=16261
 synthetic, etching cavities rel. to growth, etching obs. 1=19795
 synthetic, internal friction 1=14858
 synthetic, internal friction, growth depend. 0=10259
 synthetic, i. r. and low-temp. u. s. absorption, rel. to OH defects 0=11764
 synthetic, optical properties 1=8979
 synthetic, optical studies of spirals 1=14566
 synthetic quartz, optical properties 1=8979
 synthetic, topography and etch patterns 0=16285
 synthetic, use for u. v. polarimetry 2=7411
 temp. change at boundary with superfluid He 3=5570
 temperature change at boundary with superfluid He 2=15838
 texture of single crystals, by parallel X-ray beam method 0=4628
 thermal conductivity 3=4831
 thermal conductivity at low temp. 1=923
 thermal conductivity, measured by five methods, as calibration standard 0=10795
 thermionic exo-emission 2=3065
 thermoluminescence 3=11020
 thermoluminescence measurements, structure defects 0=16117

Quartz—contd

thin films support, Fe, rel. to optical refl. 2=4112
 transmission in far i. r. 2=5023
 transmission, 40-200 μ , 300-750°K 4=13053
 transmission coeff. for ultrasonics, meas. 1=2825
 u. s. absorption, below 30°K, 500-10 000 Mc/s meas. 4=17353²
 u. s. surface waves, velocity and attenuation, meas. 0=8738
 ultrasonic absorption in fused quartz, to 1 kMc/s and 1.4°K 4=6725
 ultrasonic absorption, up to 1000 Mc/s 0=10733
 ultrasonic absorption in Z-cut crystals, rel. to thermal parameters 4=6724
 ultrasonic beam directions calc. 2=23061
 ultrasonic crystal, oscillatory behaviour 2=7274
 ultrasonic transducer, equivalent diagram 2=9347
 ultrasound velocity, new result 2=1239, 7312
 unit cell parameters, specimens from 10 deposits 0=14021
 vapour, h. f. discharge emission, 2500-4500 Å 0=1525
 vibrating crystal, as cryogenic thermometer 4=14473
 vibrating, internal displacements, by X-ray diffraction 3=15982
 vibrating plates 0=16751, 19253-5
 vibration modes of double-convex lenses 0=14713
 walls, Hg²⁰¹ nuclear quadrupole relaxation 4=6493
 wedge, effect on transmittance meas., 2-15 μ 4=20443
 whiskers, growth 1=6505
 whiskers, growth and structure 2=10804
 whiskers, mechanical strength 1=20371
 X-cut, sound velocity to 10 Gc/s 3=18934
 X-irradiated, luminescence and coloration 0=16089
 X-irradiated, thermoluminescence and decoloration effect of Na and Li ions 0=18154
 X-ray diffraction, small-angle, surface effects 2=8899
 X-ray diffuse scattering, before and after n-irradiation 1=15058
 X-ray emission spectra, K β -bands 0=20639
 X-ray monochromator 2=5425
 X-ray reflect., and crit. angle and absorpt. 4=28675
 X-ray reflection, boundary effect from ground plate 2=10953
 X-ray spectrochemical analysis 0=16296

principle 1=2708
transfer in scatt. media, Shuster-Schwarzschild
method 4=18119
transfer, slip concept for boundary condition discon-
tinuity 4=14090
transitional radiation, limit of applicability 0=8573
transmission across interface between two
dielectrics 4=10147
transport, modified spherical harmonic soln. 4=11126
transport, modified spherical harmonic soln.,
extension 4=11127
transport, scatt. anisotropic multiple 4=14088
transport, scatt., anisotropic multiple, numerical
solns. 4=14089
trapped, in varying mag. field, distrib. 4=21636
two-level quantum system, coupling 3=3744
two-stage radiant-energy 1=16151
units, and critical energies 4=6012
universal law, phenomenological
aspects 1=4497
in universe, density, time depend. 1=1630
vacuum u.v., abs. intensity meas. 4=8418
vacuum u.v. radiation physics, conference 3=5515
zeta, hot plasma, e.m. radiation emission,
sub-millimetre 1=9574
A, absorption rel. to shock wave flow 2=9307
H, high temp. plasma, impurity losses 1=18855
H₂-O₂ flame, emission and absorpt. meas. 3=5162
N, atomic ions in recombination 3=7443
N₂, high temp., i. r. continuum, polarization inclusion
in free-free calc. 4=27222
N and Ar plasmas, specific radiation, cal. and
meas. 4=29934
W, spectral power distrib. from colour temp. 3=7322
heat
ablating heat shield, transient heat flow eqns. 2=2909
absorbers, freely exposed, behaviour in radiation
fields 0=16918
absorbing and emitting media, boundary layer 2=22075
absorptivity-emissivity ratio, more complete
description 2=9445
air, high temp., i. r. continuum 4=27222
air, transmission, near water vapour bands 4=12471
atmosphere i. r. flux, upward, observed and
computed 3=13678
black ball observations, over US 0=12203
blackbody, coherence-time, effective bandwidth 3=14411
black bodies cooling, 5 radiator stages 3=14412
black body, from cylinder with reflecting walls 3=14409
blackbody, nature 2=127
black body, photon distance correlation 1=10620
black body, into space, cooling, impossibility 3=19060
blackbody standard, 1400-2400°K 0=19490
blackbody, 2450-26 000A 2=22085
calorimeter for very high flux meas. 0=19523
cavity, cylindrical, giving uniform diffuse radiation,
calc. 4=5442
conduction coeff., spectral line effect 4=21330
in core of a heated tube, radiational conductivity 1=1839
differential methods of study 3=21608
as diffusion process 2=11531
dosage meter, for high intensity radiation 0=8833
earth, field struct. characts. 4=26776
earth, satellite meas., data interpretation 4=26775
earth, Tiros VII meas. in CO₂ 15-micron band 4=13766
effect on boundary-layer forced convection 2=15787
effect on hydrodynamics 0=19049
effects, on n-type GaAs defect movements 2=8361
electromagnetic waves, thermal noise, in lossy
media 2=17772
electron-tube anodes, vacuum cooling 0=10944

Radiation—contd
heat—contd

emission by diffuse conical cavities 3=14410
exptl. determination of some parameters 1=16147
finite grey atmosphere 3=21267
flames, i.r., by extrapolation from lab. meas. 3=11992
flames in non-isothermal cavity 2=15798
flash-heated solid surfaces, gaseous species
formation 2=17088
flat infinite layer 1=16149
flux from heated cylinder, effect of specular
reflection 0=14877
gas, cooling after shock heating 4=18482
gas-fired panel, intensity distrib. 3=11991
gas-heating by radiation 2=2913
gas heating by radiation 3=1855
gas—radiation, matter—radiation energy exchange 3=14429
in gas, with variable props. 4=29790

 tion 4=14447
 phase sensitive for long integration time 4=14550
 photocell, for u.v., portable transistorized
 instrument 3=21536
 photodetecting instruments for u.v. to i.r. 1=10589
 photodetectors, u.v. description 3=7337
 photoelectric, review 1=1805
 photoelectric, spectral sensitivity meas. 0=16824
 photographic film, clamped, vibrations excited by
 light 1=4425
 photographic radiometry, accuracy limit 0=6931
 photomultiplier, 1100 to 2200Å detection 1=10733
 photon fluctuation detector, Ge phototransistor, i.r. 0=8831
 Planckian, max. quantum and thermal detection
 efficiencies 4=14438
 plasma sheath 2=4881
 pneumatic cell with rectangular aperture 2=2933
 pneumatic cell, sensitivity rel. to gas pressure 2=2932
 pneumatic i.r. detector 2=9450
 pulse amplifiers 1=2937
 pulse frequency meter, for low level radiation 2=5281
 pulse generator for testing and calibrating 2=5287
 using pyroelectric effect, sub-mm wavelengths 4=16287
 pyroelectric, fast response, thermal detector 2=19766
 pyroelectric thermal receiver, sensitivity 2=2929
 pyrometer, with Ge detector, for temp. meas. 2=9436
 quantum effects, upper limit of accuracy 4=29799
 radiation thermocouple, response characteristics 1=11853
 radiation transfer by pipe between high refr. index
 media 4=24350
 radiometer, absolute differential 3=24106
 radiometer, absolute, using transient temp. rise
 of Cu block 3=14415
 radiometer, balloon-borne for 6.3 μ water-vapour band
 radiometer for heat flux near buildings 2=11536
 radiometer, infrared integrating 3=7384
 radiometer, net, for optimum sensitivity 3=290
 radiometer, 100-300 Gc/s, high-sensitivity 4=745
 radiometers, for field use 0=8835
 radiometers for photometric use 2=19672

Radiation detectors—contd

radiometers, thermal transducer type 0=14185
 use of radiometric effect 1=5365
 readings, effect of background emission 0=3674
 receivers near sources, collection efficiency 4=2820
 relay unit MST-2 for radiation detector,
 transistorized 4=5903

 satellite i.r. emission 2=11199
 selective receivers, energy meas., optical
 wavelengths 3=21535
 semiconductor, diffused p-n junction, var. of window
 effect with bias, calc. 4=5891
 semiconductor junctions, leakage current 2=6479
 semiconductor photodetectors, reflection-reducing
 coatings 1=11852
 sensitivity increase, thin-film circuitry 2=19764
 sensitivity of radio and optical receivers, com-
 parison 3=3921
 sensitivity threshold, rel. to background continuum and
 apparatus 0=19496
 solar short-wave radiation, photocathodes 3=9150
 solarimeters, for field use 0=4781
 for space vehicles, i.r. 4=8364
 spectral radiometer 1=1840
 spectrophone theory 0=1033
 sub-mm, broad and narrow, band, ultimate sensi-
 tivity 4=14446
 in sub mm region, comparison 4=14445
 sub-millimetre e.m. wave detection by free carrier
 absorption in a semiconductor 1=12455
 superconductors as microwave and sub-mm-wave
 detectors 1=5400
 synchronous thermal detectors 0=19493
 thermal calibration 0=19489
 thermal deflectors, forced cycled cooling 2=128
 thermal dosimeters, using temp. sensitive paint 0=8833
 thermal i.r., low-frequency noise meas. 2=17774
 thermal power transducer 1=8256
 thermal, using linear expansion 0=2266
 thermoelements, with direct visual adjustment 0=6990
 thermopile, i.r., solid backed, evaporated 4=18484
 thermopile, ribbon type 2=2928
 TIROS II instruments for meteorological
 studies 2=1028-9
 tracking system using lateral photoeffect 2=21200
 21 cm maser radiometer, use of Y-type circulator
 switch 1=5578
 two-sphere non-directional radiometer,
 calibration 2=5213
 u.v., extreme, using planar analyser and electron
 multiplier 3=14631
 u.v., fluorescent type 3=18974
 u.v. integrating meter, with CdS photocathode 0=12472
 u.v., middle and vac., spectrally selective 3=14306
 ultraviolet receivers, spectral response meas. 2=17618
 ultraviolet, vacuum, photoemission-scintillation
 detector 2=19696
 Universal Radiometer, RUS-3 4=16740
 vacuum u.v., abs. intensity meas. 4=8418
 vidicon, i.r., with PbS photocond. films 3=11996
 wide-angle receiver, radiant intensity distrib. 3=24105
 wide-band radiometer 2=7459
 X-ray spectrometry, review 2=1621
 X-rays, counters, mica and Be-types, meas. channels 4=5734
 Ag sulphide photocell for near infrared range 1=9474
 BaF₂:Er, i.r. quantum counter action 4=22872
 BaTiO₃ pyroelectric detector 2=13482
 CaF₂:Er, i.r. quantum counter action 4=22872
 GaAs, sensitive photodiode for visible 0=16830
 Gd, magnetothermal effects, near Curie point 0=19494
 Ge, backward, for e.m. mm wave detection 4=19204
 Ge:Cu and Ge:Hg, relative performances 4=361
 InSb, i.r., cooled, photocond., time const. var. bias
 current 4=11401
 InSb, i.r., nanosec. time response 4=8497
 InSb photoelectromagnetic, 7 μ region 4=19279
 InSb photovoltaic, pre-amplifier details and
 detectivity 0=14883
 LaF₃:Er, i.r. quantum counter action 4=22872
 PbS, effect of cooled aperture 2=7456
 PbS, i.r., figures of merit 4=11400

Radiation detectors—contd

PbS photocell, effect of temp. on response 0=7965
 PrCl₃, i.r. quantum counter 1=6978
 Se-glasses for 8-15 μ transmission 4=20457
 Si photocells, surface-barrier, props. 2=18754
 Si p-n juncn., internal pulse amplification 4=28589
 Si p-n junctions, stable, high field 4=5890
 Si photodiode, for vacuum uv. 4=29747
 Si slices, cond. elec., meas., 4 probe 4=10064
 Si wafers containing diffused P₂O₅ 2=18602
 SrF₂:Er, i.r. quantum counter action 4=22872
 Te photoconductors, sensitivity 2=7460

 XeOF₄, rel. to Xe—O bond 3=17590
 ZnCl₂ solutions 4=5184

organic substances

- acetamide, liquid and crystal phases 0=5948
 acetic acid and water equimolecular solutions 1=146
 acetone, temp. dependence in gaseous and liquid phases 1=9395
 acetonitrile, temp. dependence in gaseous and liquid phases 1=9395
 alcohols, intensities rel. to bonds 2=11375
 alcohols, ten, depolarization meas. 3=22579
 alcohols, ten, solvent effects on intensities 3=25115
 alcohols, twelve, characteristic bands 3=22578
 aldehydes, relative line intensities 0=85
 allene, integrated intensities and polarizations 4=6609
 amides, shifts in mixtures 2=7218
 amines, rel. to N—H stretching and bending freqs. 2=7219
 anisal-para-amino-azobenzol, investigation using ruby laser 4=2841
 aromatic cmpds. 0=8917
 aromatic compounds, intensities and depolarization degrees rel. to metallic molec. model 4=6612
 aromatic hydrocarbon molecules, effect of adsorption 3=8932
 aromatic, large conjugated systems, in host matrix 4=17547
 azoxyanisol, investigation using ruby laser 4=2841
 benzene crystals, -209°C, heat capacity calc. rel. to hydrogen bonding 4=30691
 benzene, intensity, temp. depend. 2=8098
 benzene laser 4=21675
 benzene, using laser, ruby, light source 4=14372
 benzene, light intensities, ang. distrib. 4=16118
 benzene, Rayleigh line study rel. to temp. 1=18417
 benzene, scattering cross-sections 4=17300
 benzene, temp. dependence in gaseous and liquid phases 1=9395
 benzenes, trisubstituted, to -180°C 1=14035
 binary solutions, molec. scatt. power, conc. depend. 3=21372
 bromodichlorofluoromethane (CBrCl₂F) 0=4207
 n-butyl alcohol 2=8099
 carbon tetrachloride, temp. dependence in gaseous and liquid phases 1=9395
 carboxylic acids, intensity 1=14033
 chloroform and deuteriochloroform mixed crystals 4=10203
 chloroform, effects of change of state 3=731
 chloroform, gaseous 1=7473
 chloroform, intensity, temp. depend. 2=8098
 chloroform, liq. and crystalline 4=10203
 chloroform, temp. dependence in gaseous and liquid phases 1=9395
 p-chloriodobenzene, linewidths meas. 4=6618
 chloromethanes, polycryst., liq. N₂ temp. 4=22905
 conjugated mols., effect of free electrons of nitrogen 3=20004
 conjugation effects on intensity 1=14032
 crystalline powders, compared with solutions 3=6650
 cyclic sulphur-containing compounds 1=14115
 cyclobutane 4=30457
 cyclobutane, C₄H₈ and C₄D₈ 2=16543
 cyclobutane, rel. to normal vibrations and potential constants 4=6614

Raman spectra—contd

organic substances—contd

- cyclohexane, deuterocyclohexane, intensity and depolarization calc. 4=12501
 cyclohexane, line broadening, due to molecular rotation 2=703
 cyclohexanes, 9-methyl-substituted, low-freq. 4=6632
 deuteriochloroform, liq. and crystalline 4=10203
 diamines and diammonium ions, effects of ionization on C—H stretching freqs. 4=22403
 dibromochlorofluoromethane (CBr₂ClF) 0=4207
 p-dichlorobenzene, line broadening, due to molecular rotation 2=703
 p-dichlorobenzene, wave numbers and intensities 0=14817
 dichlorotoluenes, to -180°C 1=14035
 1,2 difluoroethane 1=3540
 diglycine barium chloride monohydrate single crystals 4=13063
 diphenyl, and 45° change in angle between ring planes on melting 4=6635
 diphenyl decapentene, rel. to excited state lifetime 4=6621
 diphenyl dodecahexene, rel. to excited state lifetime 4=6621
 dyes, resonance effect 0=7765
 electronic band spectra relationship, vibrational structure 0=4209
 esters, intensity 1=14033
 esters, relative line intensities 0=85
 ethane-d₆, rel. to config. and dims. 3=4765
 ethane, hexadeuteroethane, electro-optical, depolariz. consts., calc. 4=25702
 ethyl alcohol 2=8099
 excited-state lifetimes of normal vibrations 4=6637
 fluorinated ethanes 0=5938
 fluorobenzene crystals, rel. to liquid, dimer formation 1=14034
 fluorinated ethanes 1=8839
 formic acid, effects of change of state 3=731
 glycerin 1=14043
 glycine and addition cpds 4=22907
 α -glycine, crystalline 0=4421
 group Ib and IIb complex cyanide solns., CN stretching bands 0=16706
 hydrocarbons, rel. to conjugated double bonds 2=20848, 22990
 iodoacetylene, giving ground-state rot. const. and C—I bond length 4=6624
 iodoxybenzene 0=3619
 ketones, relative line intensities 0=85
 methane 0=17752
 methane, and its isotopic forms, absolute intensities and depolarizations, calc. 4=9758
 methane, laser stimulated, four photon 4=9704
 methane, line broadening at 15-250 atm. 3=176
 methane and methane-d₄, $\nu_1(a_1)$ modes 3=22559
 methane, ν_2 band, rotational structure 3=22586
 methanol and deuterated methanols 1=8836
 methyl alcohol 2=8099
 methyl alcohol, effects of change of state 3=731
 methyl alcohol, gaseous 1=7473
 methyl borate 2=8100
 methyl iodide, polycrystalline 4=28715
 naphthalene, fluoresc. spectrum, 2°-100°K 3=25493
 naphthalene halogenated derivatives 4=28249
 naphthalene, l.f. shifts 4=4281
 naphthalene, wave numbers and intensities 0=14817
 nitriles, intensity 1=14033
 n-nitroaniline in benzol, absorption and line intensity 1=12291
 nitrobenzene from laser, two-step process for anti-Stokes line 4=5191
 nitrobenzene, scattering cross-sections 4=17300
 organic liquids, rel. to electronic absorpt. spectrum 4=21135
 paraffins, relative line intensities 0=85
 para-nitrosodimethylaniline, freq. depend. of scatt. intensity in electronic absorpt. band 4=25713
 penta-deutero-fluoro-benzene 0=20626
 perchlorofluoride, structure 0=17754
 n-phenylenediamine, liquid and crystal phases 0=5948
 polyatomic mols., intensity of scatt. lines 3=11797

Raman spectra—contd**organic substances—contd**

polyene compds. 0=9816-17
 polyethylene, vibrational 3=10556
 polyethylenes 3=8321
 polymers, diphenyl, intense harmonic and combination lines 4=6637
 polyoxymethylene 1=12279
 polytetrafluoroethylene 4=20144
